8/25/2026 - Fragmentary Order - Gamescom Video

If you are here from the video/new hype for FragO and are looking to get started, you will be forced to start in Act 3 for the duration of the event which began on 8/19/2026. The event specific section of the guide is Act 3 - 3.5 News Articles. *HOWEVER*, you should continue reading this page so you can better understand what all is going on and how to navigate this web puzzle.

It is *VERY IMPORTANT* that you keep your Codes private, they are unique to each player.

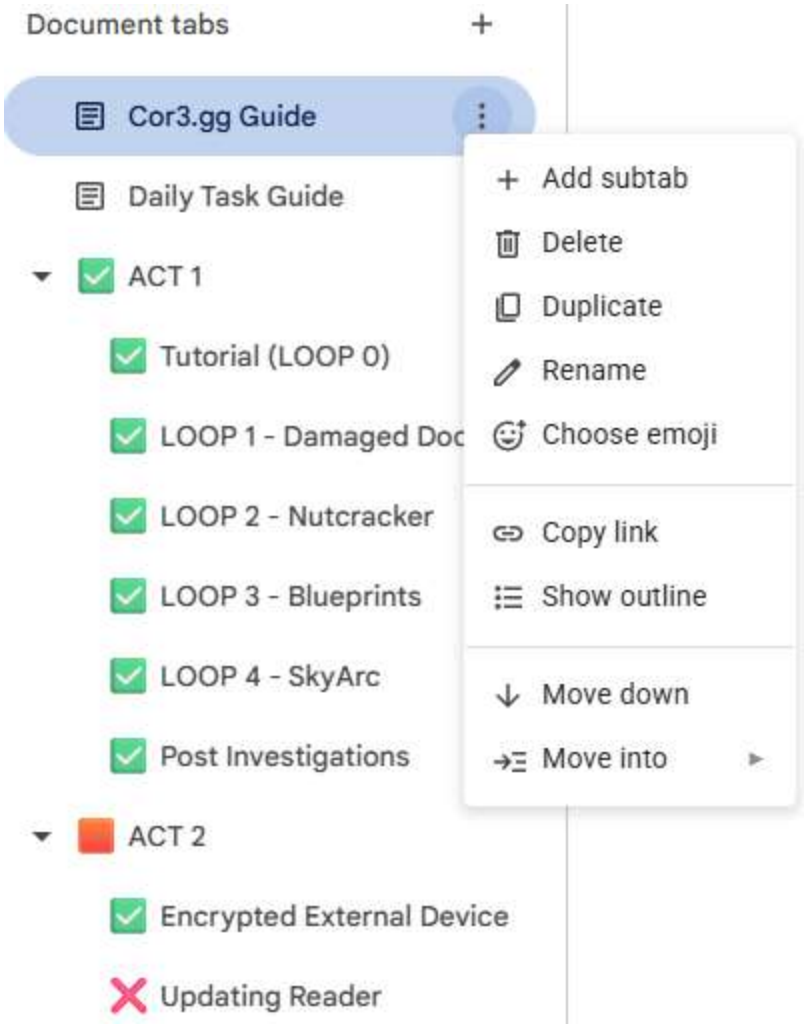

Using this Guide

Due to the sheer amount of loops and data in this project, we have decided to use document tabs over to the left.

You may need to "**Hide Outlines**", to see all the different document tabs.

✅ = Solved
❌ = Not Solved
🟧 = In-Progress

(Acts 1 and 2 get you familiar with the site and story and earn you some CR for use in Act 3, plus save a cost of 42k CR later.)

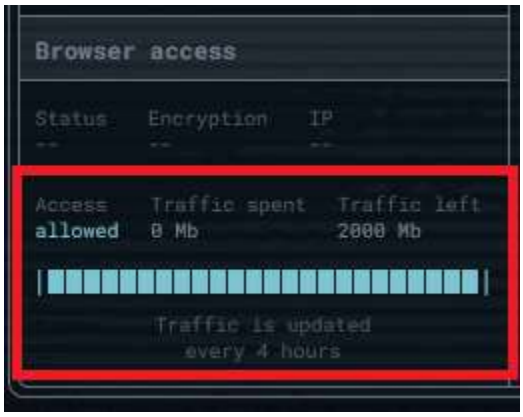

The cor3.gg site makes use of various virtual programs, some of which require exact specific commands to be run. Others are just clicked.

Any TERMINAL commands will be formatted like this - `Auth_check BxfBj`
Any Corie Database queries via the messenger are formatted - `PERSON Simon Webb`
Any Server names from the Act 3 Network Map will be formatted - **RM7-E1L3**
Any Files or Logs found on Network Map Servers will be formatted - **export_6021.bak**

Complete all Daily tasks as soon as they are available, you need 7 complete for step 6! You can redo them without a penalty, if you fail.

Various parts of the site have limited uses with a timeout to refresh, a bit like energy in a mobile game. Leveling up your reputation increases these limits.

The Browser has a limit on page loads, each page load uses 50MB of your limit. The browser does not give an exact time it will refresh, simply 4 hours after the first page load.

The Terminal has limited uses, which will be shown after running a command.

The CORIE Database also has limited uses

All of the limited uses are seemingly increased with the increase of your reputation level which is shown in the top right of the website.

Timegates that we've included in the document are subject to change, and some have decreased already.

Patchnotes are now visible in the CORIE Updater.

Join NoiceGuy's discord to help us crack this site!
https://discord.gg/noiceguys and grab the FragOrder (FRAGO) role from #roles
This will give you access to the #frago-chat channel, a place for both cor3 and Fragmentary Order.

https://discord.gg/cor3gg < Official Cor3 Discord

Order of progression:

ACT 1 *(Solved)*

Video Walkthrough Cor3.gg ARG Walkthrough by 'ImGoingSpace
You'll start here, follow the guide through talking to Aurana, you'll then end up in 1 of 4 investigation loops. You need to complete all 4 investigations before progressing to the final step of decoding trade shipments.

1. **Tutorial**: LOOP 0 ***- (Solved)***
2. LOOP 1: Damaged Document ***- (Solved)***
3. LOOP 2: Nutcracker ***- (Solved)***
4. LOOP 3: Blueprints ***- (Solved)***
5. LOOP 4: Skyarc ***- (Solved)***
6. Post Investigations ***- (Solved)***

You **end** ACT 1 by purchasing your ticket to Mars via the M7 ship for 4,500 credits. You'll need to complete at least 7 Daily tasks to top up the amount you get from tasks.

ACT 2 *(Solved)*

After clicking "**Depart**" on the M7 ship, you will get a message from Aurana telling you to collect your things and you'll go back outside the terminal. Click the Armor on the left table, the bag on the floor and on the shelf above the bag, the small white device.
You will be taken to the M7 site and trailer, click Cor3.gg at the bottom, then "Wake Up"

Back in the terminal this device is a new option on the bottom menu and needs decoding.

After waking up on a ship, you (the protagonist) pick up a hard drive and connect it into your terminal/tablet.

Finding all 20 Fragments (De-crypting External Device) - *(Solved)*

1. Stage 1: **1st** to **4th** Fragments ***- (Solved)***
2. Stage 2: **5th** and **6th** Fragments ***- (Solved)***
3. Stage 3: **7th** and **8th** Fragments ***- (Solved)***
4. Stage 4: **9th** Fragment ***- (Solved)***
5. Stage 5: 10th and 11th Fragments ***- (Solved)***
6. Stage 6: 12th Fragment ***- (Solved)***
7. Stage 7: 13th to 16th Fragments ***- (Solved)***
8. Stage 8: 17 to 19th fragments ***- (Solved)***

9. Stage 9: 20th Fragment ***- (Solved)***

Fragment Timeline

(More expansion on the timeline can be found on the Fragment timeline page)

Now we have decrypted/repaired the drive we can now access the file '**EVID-CIS-MAIN-C2R1856.2**', **double-click** it to enter into a timeline with audio clips, video clips and some pictures. These are referred to as "**FRAGMENTS" (Frags**)

There are a total of 20 discovered Fragments, and we need to progress through and unlock all 20.

ACT 3 *(Began April 12th, 5pm UTC)*

Daily Tasks:

It is important you complete your Daily Tasks, to get as many credits as possible. You need 4,500 credits at the end of Act 1 in order to progress to Act 2. We don't know yet what else we may need credits for down the road. Credits are also earned through completion of other in-game loops, tasks and progression.
Note that the difficulty of the tasks increases on every 7th completion.

Daily Task guide

Daily tasks refresh daily at 00:00am GMT, if you miss it, you restart from day 1.

Current Step: Act 3 - Fragile Deal

To those hunting ranks

Reaching Renown 13 now unlocks Pathfinder automatically, tying the rank to your actual long-term progress. SEE HERE

SKIPPING TO ACT 3 ON REGISTRATION WILL NOT ALLOW ANY TASKS IN ACT 1/2 TO BE COMPLETED.

Web-based Terminal Hack (Mastermind) solver from Sir & KasliCatal:
https://idsir.github.io/crackhelper.html

There are 5 Ranks that can be assigned to your account, Highest to lowest -
You can be promoted by meeting certain requirements.
Each rank comes with game rewards.

FORERUNNER

“You are among the first 100 — your position is secured.Those who arrived before the surface hold what others won't.”

The first 100 accounts to complete ACT 1 and board the ship obtained this rank.
We have a list of known Forerunners.

No longer obtainable.

Perks:

1. Unique profile frame
2. Guaranteed - Early Deployment
3. Personal Badge
4. Lifetime nickname reservation
5. Unique Forerunner Title

THE PILLAR

“You pushed past Act I while others were still figuring it out.
The system noticed. You've been marked.”

Anyone that completed ACT 2 prior to 12th April 2026 (The FRAGO Trailer release) gained this rank.

Still available.

Perks:

1. High Priority - Early Deployment
2. Personal Badge
3. Nickname reservation
4. Unique Pillar Title

TORCHBEARER

"You completed Act I — most never do.
The system has registered your presence."

Complete Act 1 (but not 2) prior to 12th April 2025.

The Torchbearer rank is attainable upon reaching level 15, completing the Broken Server and Black Ledger quests, and accumulating 350,000 credits in total.

Perks:

1. Elevated Priority - Early Deployment
2. Personal Badge

PATHFINDER

"Entry point crossed.
You are now part of COR3."

Completing Act 1 + 2 ("Hardcore" mode) will give this rank upon beginning Act 3.

Foundation can be promoted upon reaching 13 account renown, completing the first deployment (Act 3) quest, and earning 150,000 credits.

Perks:

1. Enhanced Priority - Early Deployment
2. Personal Badge

FOUNDATION

"No fixed route earned this mark.
The system recognized a viable base state."

Any account that signs up and skips to Deployment (Act 3) is given this rank.

Perks:

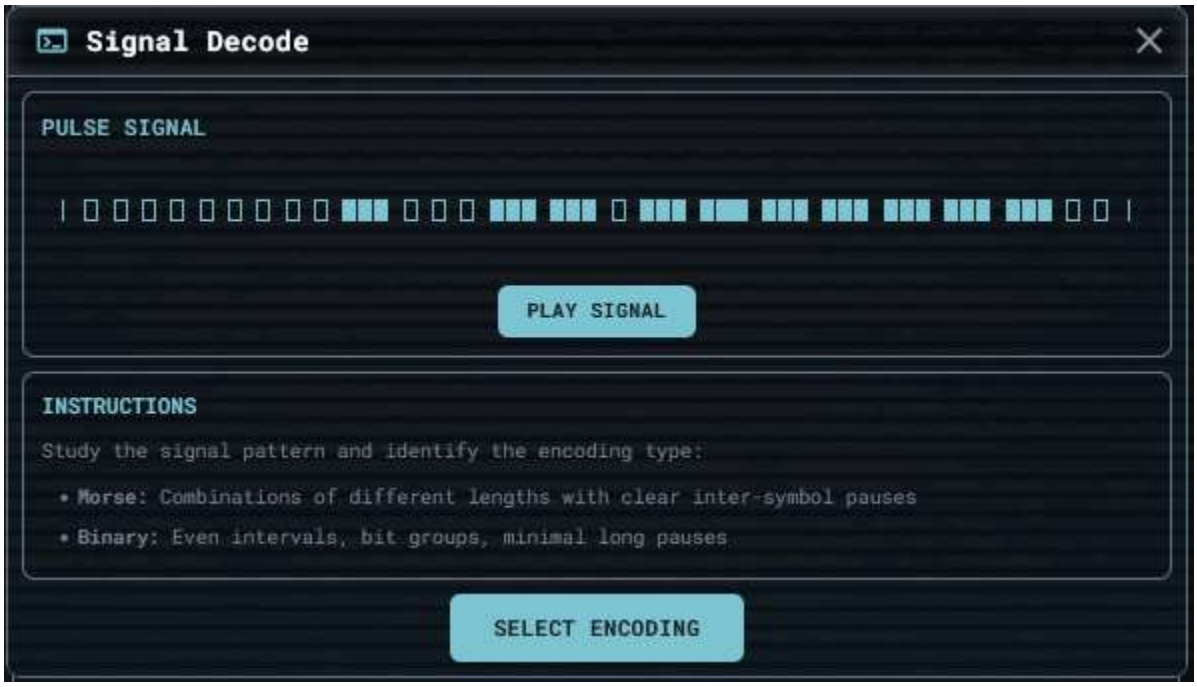

1. Low Priority - Early Deployment
2. Personal Badge

Daily Tasks Guide:

Signal Decode

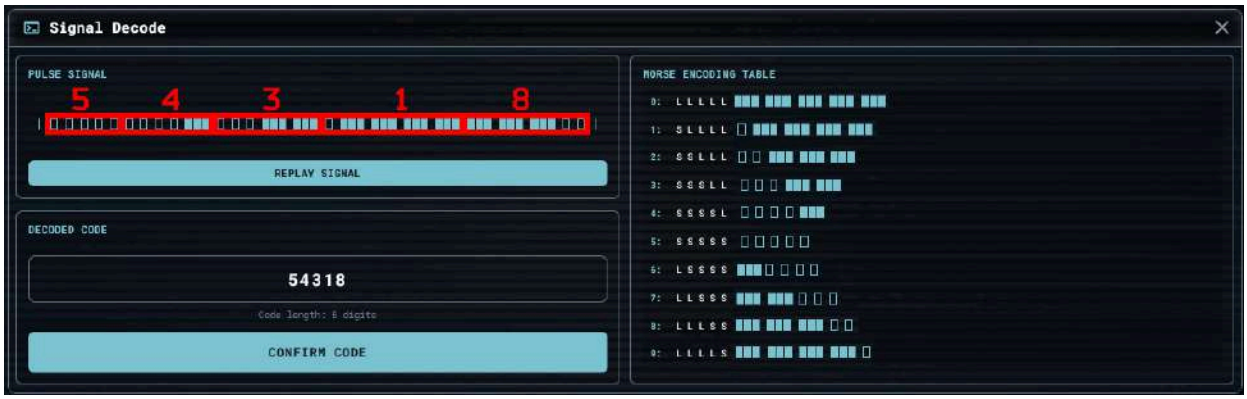

Count out the number of pulses that you see. Morse is easier to decode.
The number will be a multiple of 4 or 5. You can close and reopen to get a different code.
Once you get to 20 characters, you will have to listen to the code to see which is which.
We've seen lengths of 12,15,16,20, 25, 40 and 50 so far.
12, 16, 20 and 40 are Binary. 15, 25 and 50 are Morse.

A multiple of 5 is Morse. A multiple of 4 is Binary.

Otherwise, you simply match the S and L (Short and Long). Split the code into segmented chunks.
Then match the chunks, Short and Long, to the segments you have.
I have edited pictures here to show these chunks.

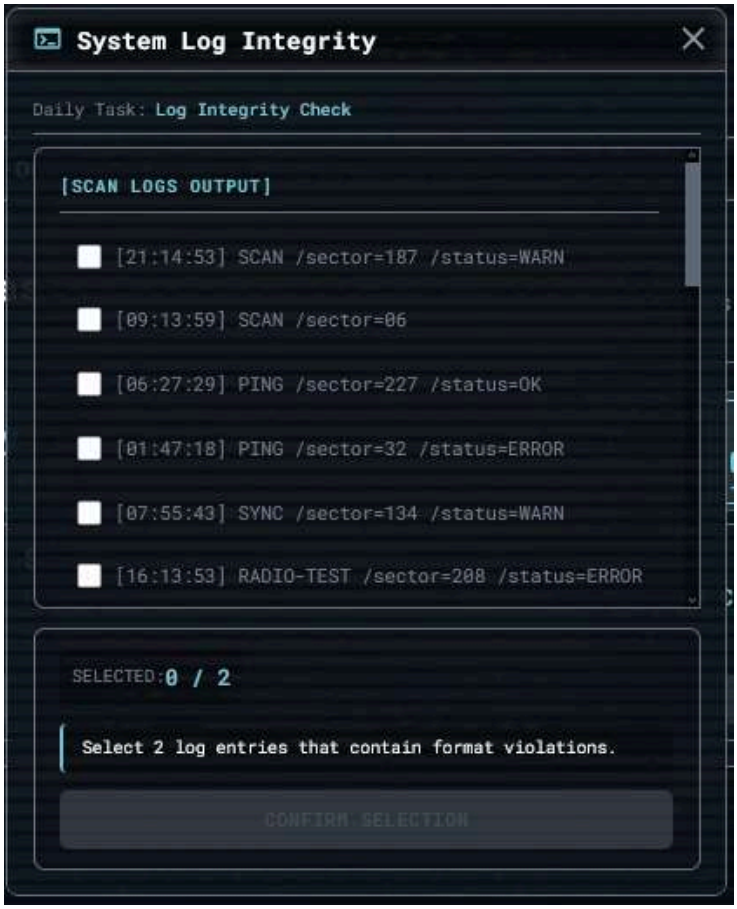

Binary is the same give or take, with 4 character segments.

System Log Integrity

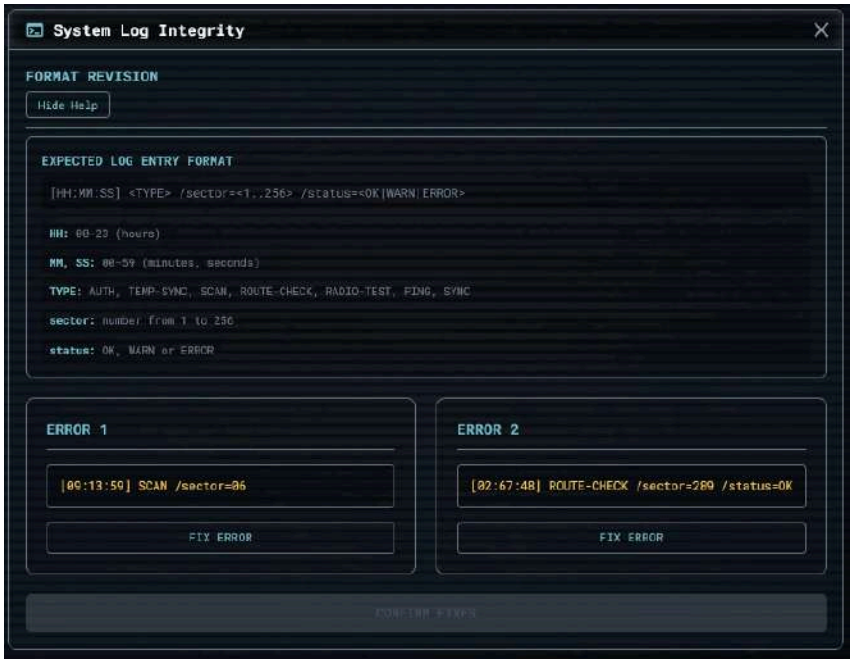

You need to pick the correct logs from the list, but the help telling you which logs to pick is on the second page!

The second log in this list is missing its /status. So it is a violation.

The sixth one, seen in the image below, has its sector as “289”, which is outside the allowed range.

And the minutes in the time slot are “67”, which is also outside the range.

The help at the top of this window tells you exactly what to look for.
[HH:MM:SS] <TYPE> /Sector=<1-256> /status=<OK|WARN|ERROR>

HH must be 00-23
MM,SS must be 00-59
TYPE must be one of AUTH, TEMP-SYNC, SCAN, ROUTE-CHECK, RADIO-TEST, PING, SYNC
SECTOR must be present, and between 1 and 256.
STATUS must be present, and one of OK, WARN, ERROR

Simply check off this list for the obvious violations, such as completely missing sections, then for finer details like numbers outside ranges and incorrect text.

After you confirm and rescan, the task is complete. It will try to run another loop, but you can just close it.

BACK TO MAIN GUIDE

Loop 0 - Tutorial

00:00 in video - Cor3.gg ARG Walkthrough

Read Contract.pdf + Diary.pdf

- Unlocks the infinite_memory.corie/main and welcome.corie websites
- Grants 20 XP
-

Check the messenger with Aurana and reply to each message.

To open Documents folder, the password is your FREEL_### from the top right without the @
For example, mine would be FREEL_019BB847-FDC0

Open each document, there is a minigame for each document.
You will also get a file on the desktop called “fromafriend.png” to signify completion of this step.
View it if you’d like.

Return to messages with Aurana

She will tell you to run the CLI Command “`chmod 555 video`”

Reply to her and then click the terminal icon on the bottom of the screen (>_)

Type / paste in “chmod 555 video” and you can now access the video folder on your desktop
Open it and watch the video, this is the end of the tutorial loop.

Following the video you will be placed on 1 of 4 loops below;

You MUST follow the steps of the path you are on before progressing another.

BACK TO MAIN GUIDE

a. LOOP 1: Damaged Document
b. LOOP 2: Nutcracker
c. LOOP 3: Blueprints
d. LOOP 4: Skyarc
e. Post Investigations

Loop 0 - Tutorial

00:00 in video - Cor3.gg ARG Walkthrough

Read Contract.pdf + Diary.pdf

Check the messenger with Aurana and reply to each message.

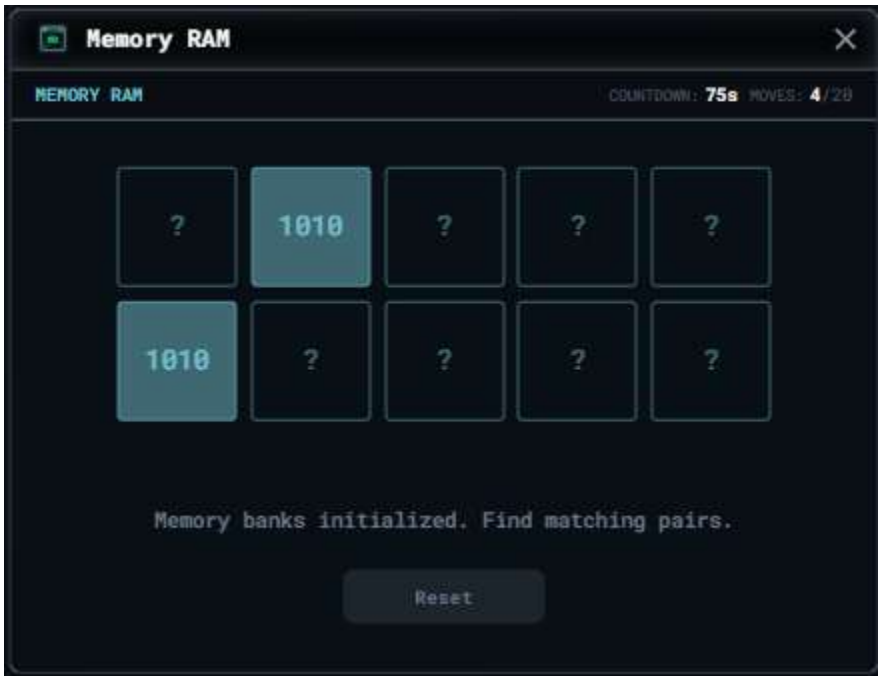

To open Documents folder, the password is your FREEL_### from the top right without the @
For example, mine would be FREEL_019BB847-FDC0

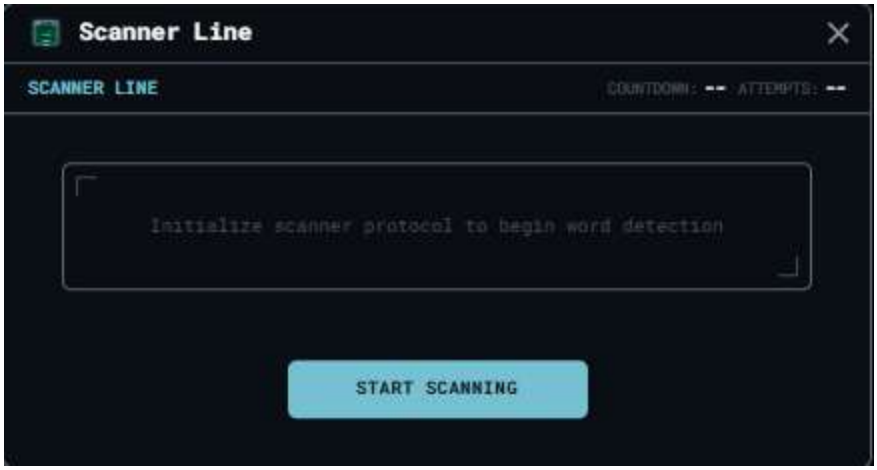

Open each unlocked document, there is a unique minigame for each locked document, three in total. The minigame not documented here is just a ‘match the flash cards’ game

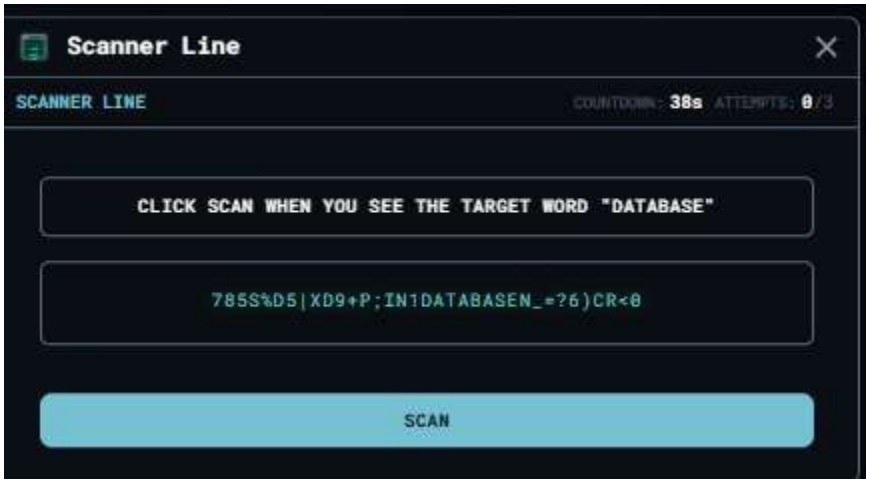

Minigame 1 - The Interrogation.pdf

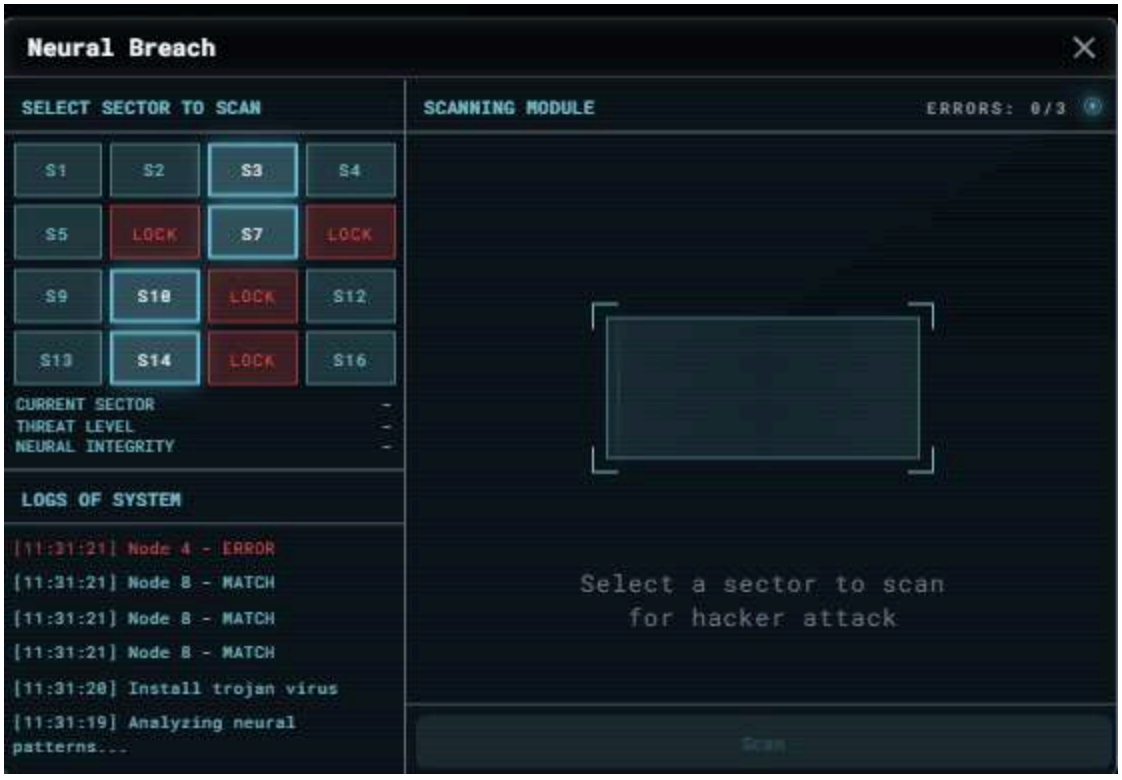

Minigame 2 - Biofarm revision (meeting).pdf

Minigame 3 - Magnetism.pdf

Neural breach is a sequence memory game, select a sector, then click scan. Alphanumeric tiles will flash in a specific sequence, when they finish flashing you just input the same sequence.

Unlike when this guide was first written, you only need to remove any ‘LOCK’ tiles and complete the highlighted (unique to each player) tiles. Lock tiles are removed by completing adjacent tiles.

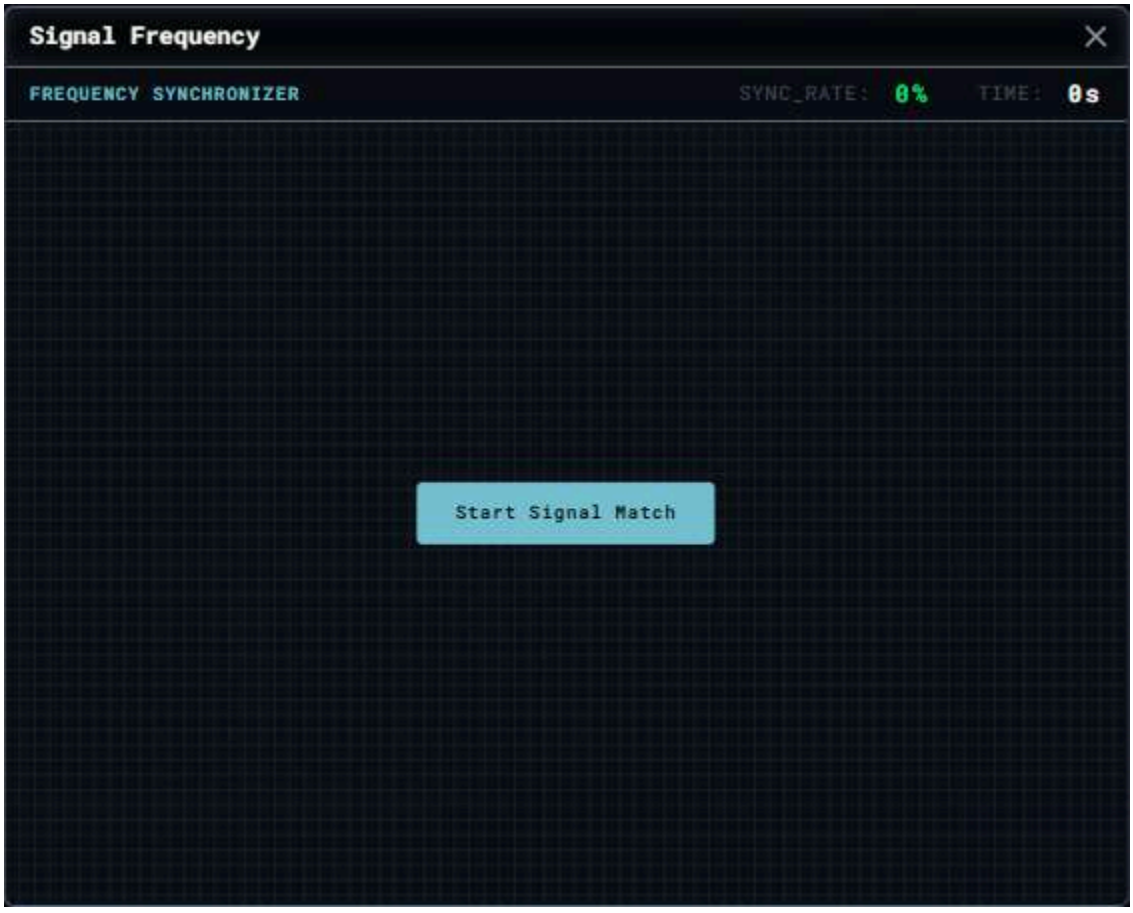

Once the three locked files are unlocked. you will also get a file on the desktop called “Fromafriend.png” to signify completion of this step. View it if you’d like.

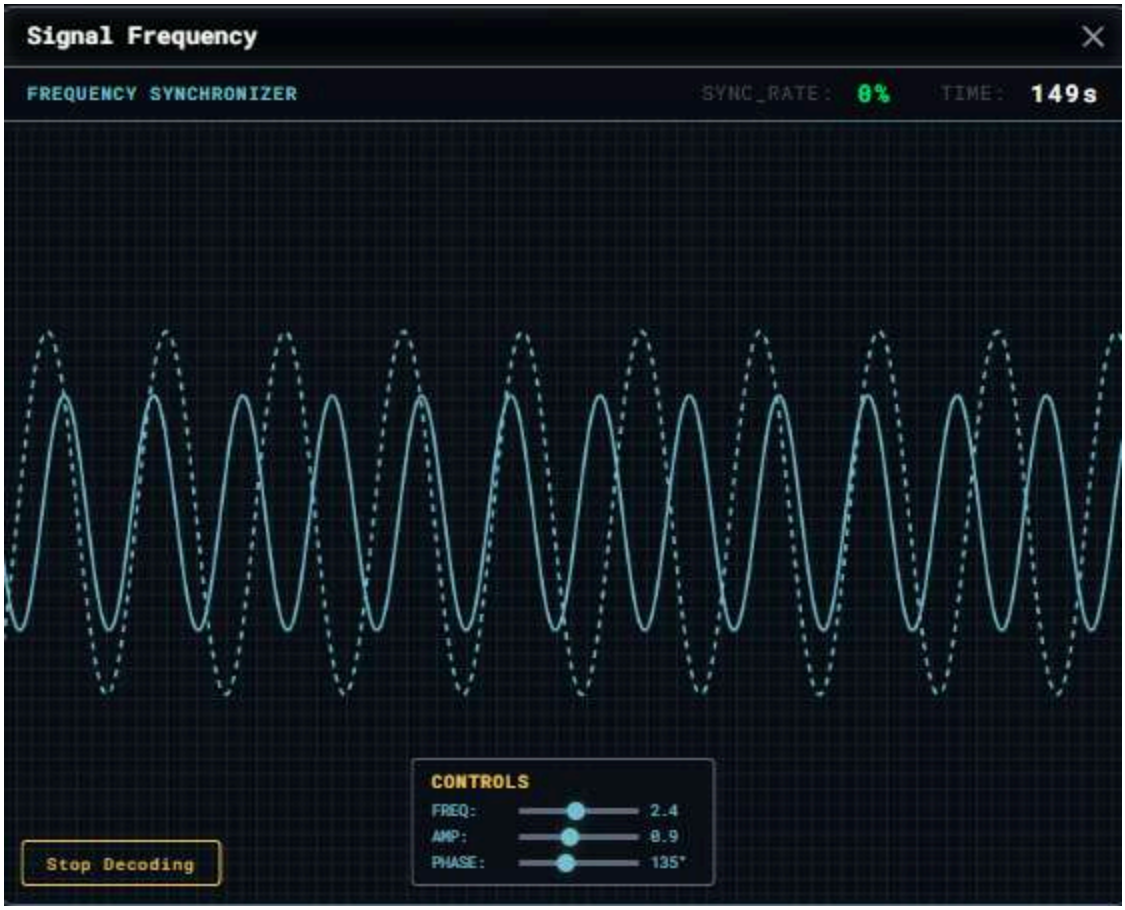

Return to messages with Aurana

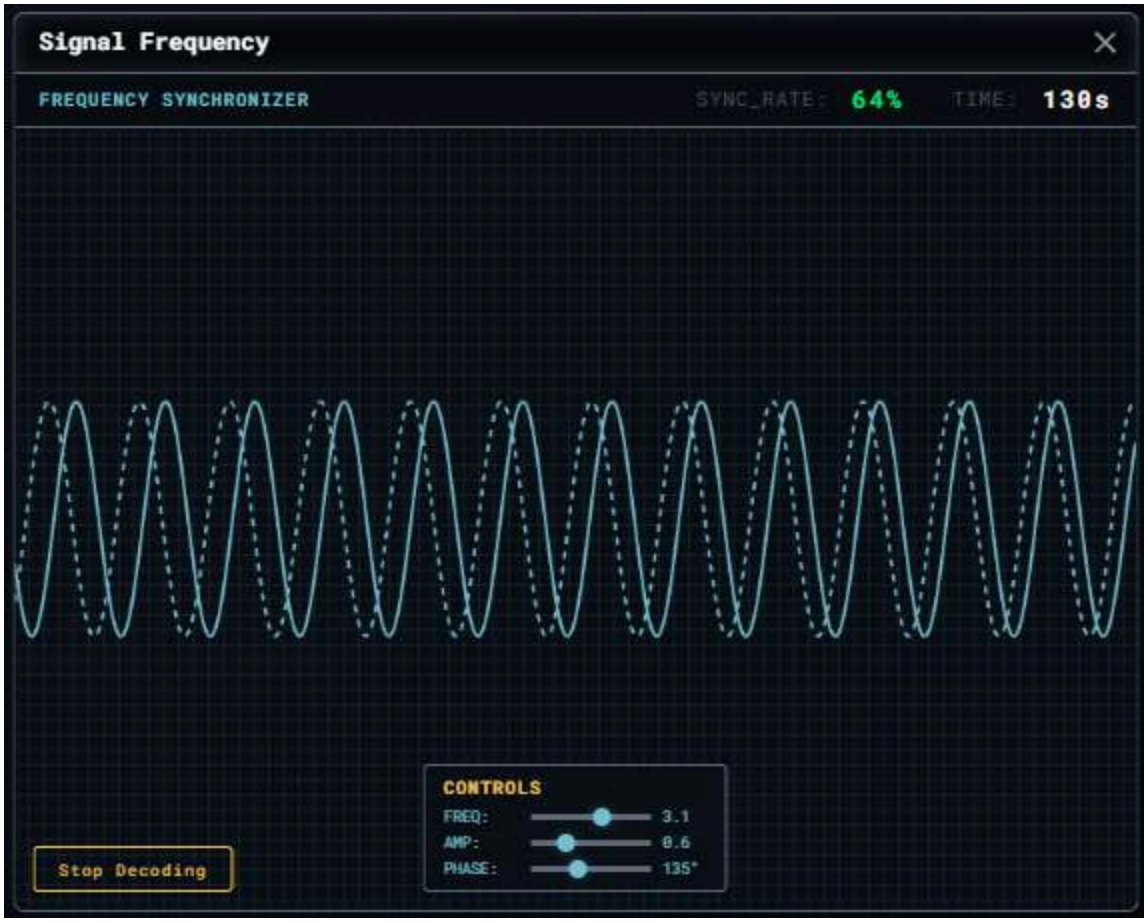

She will tell you to run the CLI Command “`chmod 555 video`”

Reply to her and then click the terminal icon on the bottom of the screen (>_)

Type / paste in “chmod 555 video” (and hit enter or click send) and you can now access the video folder on your desktop
~~Open it and watch the video, this is the end of the tutorial loop.~~
Open the file and complete the minigame to unlock the video file.

Signal Frequency
FREQUENCY SYNCHRONIZER
SYNC_RATE: 0%
TIME: 149s
CONTROLS
FREQ: 2.4
AMP: 0.9
PHASE: 135°
Stop Decoding

If you struggle with this minigame, we'd suggest manipulating the FREQ slider so that you leave it in a position with the highest visible % on the SYNC_RATE (green % number at the top) for that slider. Then do the same thing with the second AMP slider. This will allow you to simply slide the third slider until it autocompletes.

Once unlocked, watch the video.
This is the current end of the tutorial loop as of 10/3/2026

Following the video you will be placed on 1 of 4 loops below at random.
The order is different for all users.

You MUST follow the steps of the path you are on before progressing another.

BACK TO MAIN GUIDE

a. LOOP 1: Damaged Document
b. LOOP 2: Nutcracker
c. LOOP 3: Blueprints

d. LOOP 4: Skyarc
e. Post Investigations

Loop 1 - Damaged Document

20:40 in video - Cor3.gg ARG Walkthrough
First Completion by JustJayz - Discord

You receive a message from Aurana, who says you've stumbled upon a file, which seems to be a report of sorts, but is very damaged. She thinks it's related to the experiments we're investigating.
https://cdn.cor3.gg/corie/loops/1/damaged_document.jpg

In the Document, you can find that the Investigation is carried out by Simon Webb.

Go to the messenger / CORIE Database and search `PERSON Simon Webb`

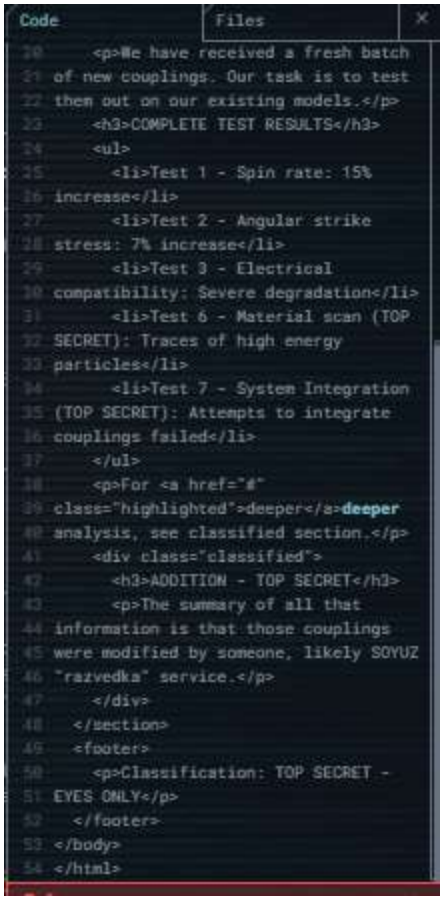

This will provide his ID (which is unique per person), which you can use to add him as a contact in the messenger.

Once added, he will reach out asking what you want, and will eventually provide you with a website link to an old archive: https://viibot.corie/archives
A file will be added to your desktop, its name is a hint to the file you need on the archive. Note its starting letter to narrow down the correct result.
It will be named a letter and then symbols. Either A or B.
E.G. - A%-!%^@!@
You need to find the **classified** document, the rating is in the top right. There are also three restricted docs.

You only need the **classified** document, in it, view the image of the case, it has 104MHz hidden in it, and then tune the radio to the range 102-104MHz (this is hidden at the top of the case image) it will play morse code eventually on one of the freqs. Cycle through them. Morse will begin when the wind in the weather app is facing East.

NOTE: DUE TO A BUG, NO AUDIO WILL PLAY ON THE RADIO. JUST HAVE THE RADIO OPEN ON 104MHz AND WATCH WEATHER, WHEN WIND IS EAST, THAT WILL TRIGGER THE NEXT STEP

The "Channel" will read d55pe18 on all correct freqs.
https://radio-corie.cor3.gg/d55pe18
The Morse translates to "LOOK DEEPER INTO THE WEB CODE"

If you close and reopen the classified report and look at the code in the browser, you will find a highlighted word hidden there “deeper”, click the word deeper to progress the discussion with Simon. This only shows AFTER hearing the morse, and refreshing the browser (navigating away or close/reopen)

BACK TO MAIN GUIDE

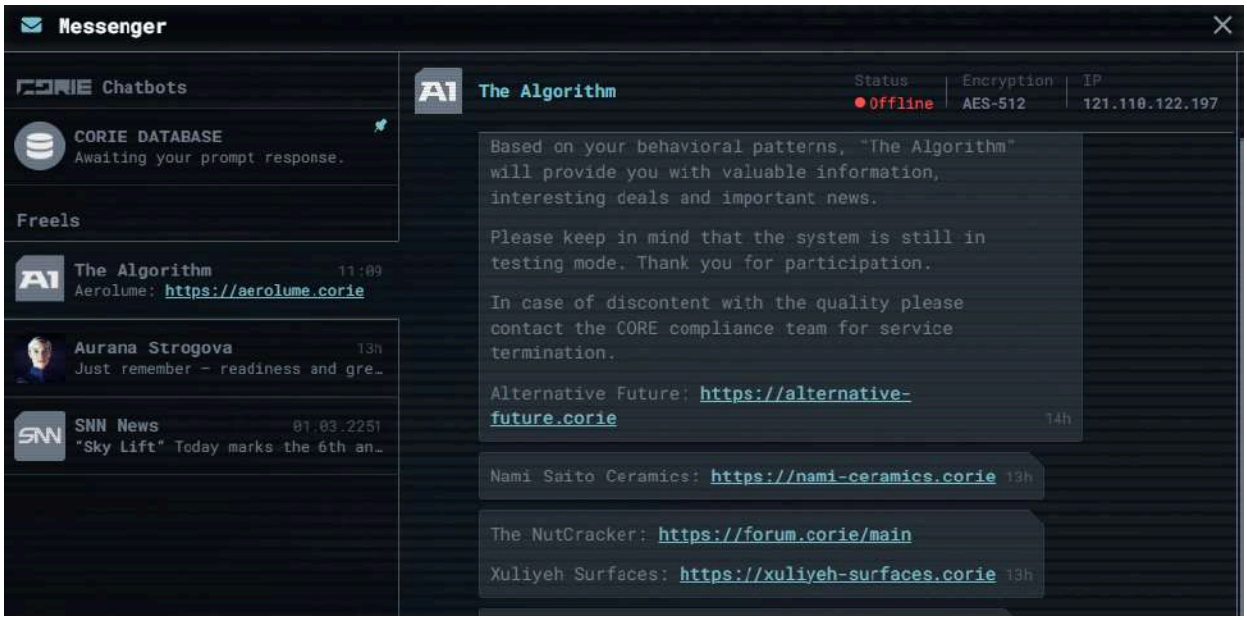

Or progress to next loop, if this was your last loop of Act 1, head to POST Investigations

a. LOOP 2: Nutcracker
b. LOOP 3: Blueprints
c. LOOP 4: Skyarc
d. Post Investigations

Loop 2 - Nutcracker Site

05:28 in video - Cor3.gg ARG Walkthrough
First Completion by Paralizard - Discord

You will receive a message from “The Algorithm” which grants you access to the site The NutCracker: https://forum.corie/main

1. Go to the nutcracker forum, The top 3 posts are useful, but only ~~the first and~~ third need viewing. ~~The first has a link in the first comment to archive.corie/main. Click that to unlock that page on the left of your browser~~
2. Go to the 3rd post, scroll down until you find the quote block that has a token at the bottom. copy that token.
3. `connect_site --token=tokenfromnutcracker` in terminal. This information is given on the 2nd post, but not needed to be viewed. This both enables the Astrocrop site for 15 minutes, and adds it to your browser.
   for example:`connect_site --token=qStpdTou6FxxuSbDgQ9Q`

Be careful not to mix up `0` and `O`, and `1` and `l`.

There is an example of a 1 in the first image, second to last character

Be careful with the font if you are manually typing it out rather than copying it via F12/Inspector.

Note: After the 15 minute timer is up, you may lose connection with the actual game server, your token used in the command will likely be recycled into something different.

4. Go to the Astrocrop site, open files from the top right of the browser, by clicking the <> button, then the Files tab and download logs.txt

This site may fail to load and show as RED on the left panel (Shows a 404 when clicked), still click the site, then click the <> icon and the files are there.
(if it doesn't appear for you copy this link into CORIE)
https://archive.corie/main

5. Sift through logs.txt to find the main offender ID. copy it, The line is WAF Block applied Id #####
    a. 

6. Before the site shuts down, run `block_id IDFROMLOGS` In terminal e.g. `block_id 123456`
7. You should get a message from "Unknown User"
8. Go through the conversation, afterwards, he will “hack” you. Prepare to press your number keys when the rows light up red to reset them. If 1 goes red, hit 1 on your keyboard before the timer runs out.
9. This will then be followed by the standard Firewall Breach minigame.
10. You will get a new file on the desktop and more messages from Aurana and move to another loop.

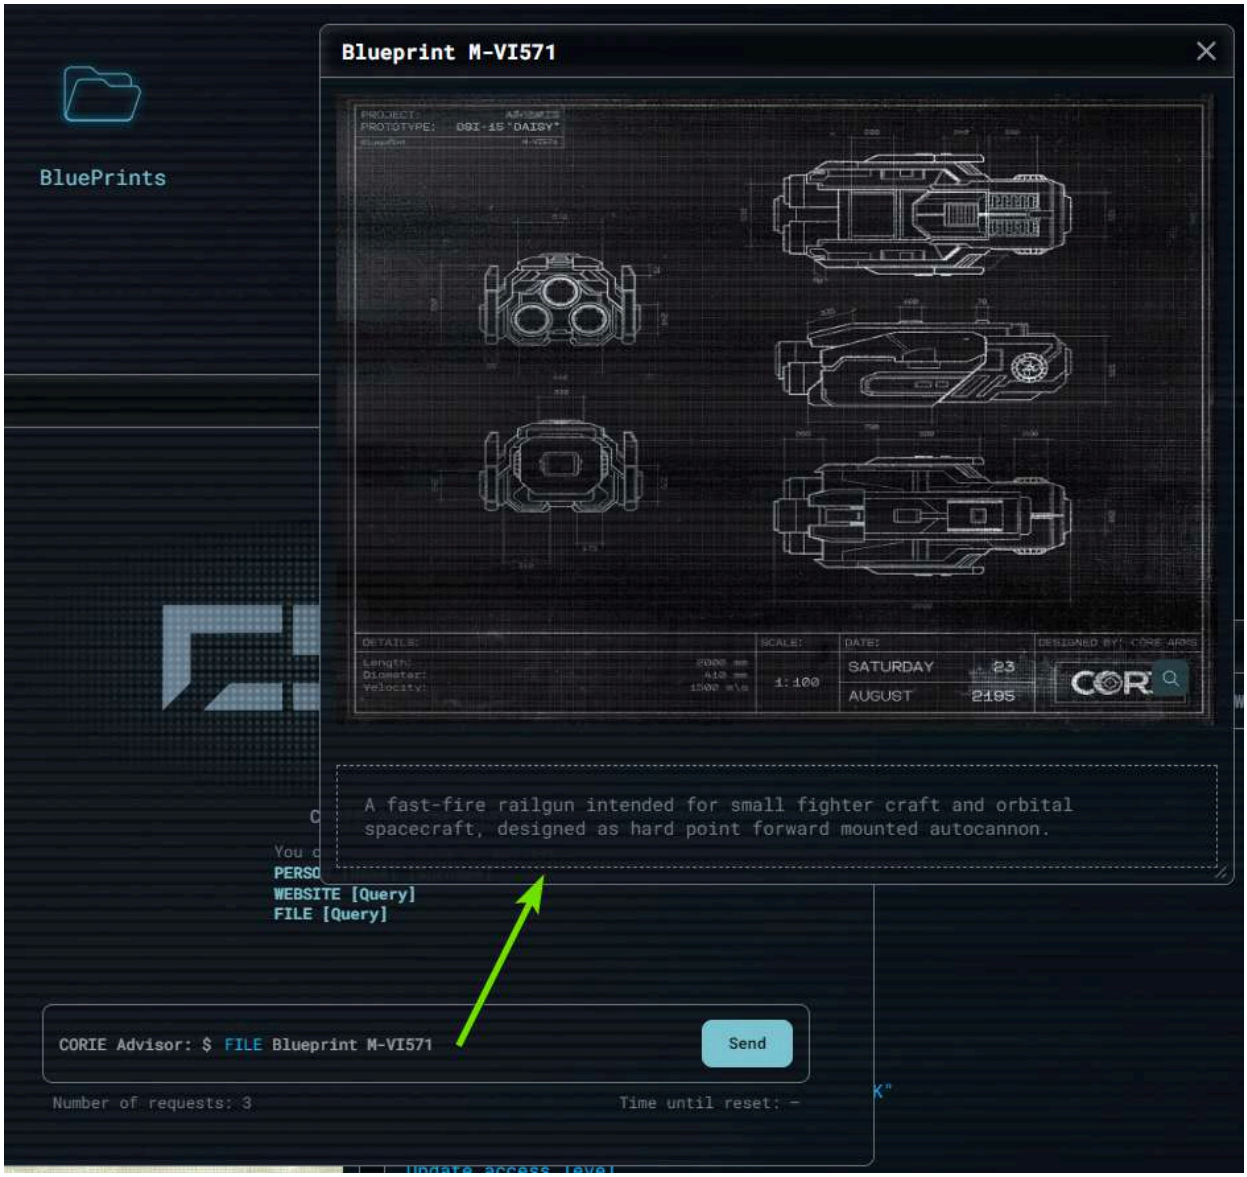

BACK TO MAIN GUIDE

Or progress to next loop, if this was your last loop of Act 1, head to POST Investigations

a. LOOP 1: Damaged Document
b. LOOP 3: Blueprints
c. LOOP 4: Skyarc
d. Post Investigations

Loop 3 - Blueprints

14:10 in video - Cor3.gg ARG Walkthrough
First Completion by xHughx/Mr.Souer - Discord

Decode the Blueprints with a minigame each then in the messenger to corie advisor:
These Filenames are discovered with a mix of the file's information and what can be seen in the corrupt file.

Complete the mini-games for each file before proceeding.

Go to Messenger then enter the below requests into the CORIE Database

```
FILE Blueprint M-VI571
FILE Blueprint M-1509i
FILE Blueprint 771-A
FILE Blueprint S-1745
```

You are then sent a Password.txt

The password you require is one off the list at random to open the last blueprint.
Each failed attempt locks the file for 30 seconds incrementally (30, 60, 90s etc)

The last file to pull is `FILE Blueprint 771-B`

Message with Aurana then run in terminal

```
scan artemis
scp artemis
```

You will now have a folder on your desktop, Artemis
Open the puzzle locked files and find the circled date **`01.12.2177`**
This is the password for the locked file.
Open it and talk to aurana to progress to the next loop.

BACK TO MAIN GUIDE

Or progress to next loop, if this was your last loop of Act 1, head to POST Investigations

a. LOOP 1: Damaged Document
b. LOOP 2: Nutcracker
c. LOOP 4: Skyarc
d. Post Investigations

Loop 4 - USOL CDC / SkyARC.txt

09:25 in video - Cor3.gg ARG Walkthrough
First Completion by ImGoingSpace - Discord

You will receive a message from Aurana telling you to look at the sky lift incident and connect to an old usol cdc archive.
Open the browser.
Go to the Infinite Memory site and in the top right, click the <> icon, then you should see three files, SKY_ARC.txt and two images, view the images and open skyarc. It will add to the desktop.

From skyarc, there is a token in the file, copy this, it is unique per user.
In the terminal, enter `connect usol cdc --password=YOURTOKEN`

```
[spec.note/legacy/usol]
old authentication procedure (deprecated):
the $%@!^$ is broken - DO NOT USE.
if partial &%#$!@ recovered, insert them here:

TOKEN: BOOc54VTK5sK

[mail_thread/arc_crew]
1: "is anyone going to fix the *"%&#!$#^#?"
2: "no, #$%!*&%# says it's 'non-critical' again."
```

```
@username: $ connect usol cdc --password=nMyTJDlil1Uh
terminal: [OK]  "connect usol cdc --password=nMyTJDlil1Uh"                [ATTEMPTS LEFT: 3]
Connecting to USOL CDC node…
AUTH OK
Archive index mounted
A9_17B
SKL_041
REC_A3
NT_FG22
OPS221X
R12_E
FRG_R1
AU_9D
S17K
BLK03
XM5_A
L041
RCP78
U_A1
BRK2
```

4 of these files are valid, you need to guess which are correct.

Files that are incorrect will give an “Invalid command” error back, and consume a terminal attempt.

Example commands -

```
scp A9_17B
scp SKL_O41
scp REC_A3
scp NT_FG22
scp OPS221X
scp R12_E
scp FRG_R1
scp AU_9D
scp S17K
scp BLK03
scp XM5_A
scp L041
scp RCP78
scp U_A1
scp BRK2
```

The list of files is different for each user. Keep trying until you get all 4.
You will be given a new folder on the desktop called Reports
Look through the 5 files you can open, one is 5.0 Reputation locked.
The other 4 files are the same but have different names for each user.
Take any full names you can find and in the corie advisor do a PERSON search for those names
e.g.

```
PERSON martin skypovski
```

You will find one profile that is complete with a 6 digit ID

Take that 6 digit ID and add them via the messenger “Add Contact”

Talk through their dialogues and review the two files they send, then report back to Aurana to complete the loop.

BACK TO MAIN GUIDE

Or progress to next loop, if this was your last loop of Act 1, head to POST Investigations

a. LOOP 1: Damaged Document
b. LOOP 2: Nutcracker
c. LOOP 3: Blueprints
d. Post Investigations

Post Loop Investigation:

24:50 in video - Cor3.gg ARG Walkthrough
First Completion by TheColonel - Discord

After completing all 4 loops, revisit the astrocrop archive and download all available files. One is rep locked to 4.0, which you now have, Sandman and sons.

We also have, in the reports folder, a file OPS_Archive which is 5.0 Rep locked.
You can run PERSON commands on the names in this file, of the Col and Majors

```
PERSON Augustus Nordman
PERSON Frank Kirch
```

You do not need to do these at this time, but one name will be used later.

Rep 5 - Trade & Shipment Database:

First Completion by TheColonel/ImGoingSpace

Upon completing all 4 loops and talking with Aurana, Your diary on the desktop will update, open it, then you will receive a manifest file and folder, open this file and continue the discussion. Aurana will give you a link to a site telling you to run some CLI commands.

Run **`auth_probe trade_shipment`** in the terminal and you will see a list of codes.
For each of these you need to run “auth_check” ID, this list is the same for everyone but in a different order. 3 of them will be valid, so once you have 3/3 you dont need to auth check the rest:

Copy and past these to not confuse L and I and 1.

```
Auth_check BxfBj
Auth_check sxMyG
Auth_check UGrwI
Auth_check WHpQB
Auth_check p6ny2
Auth_check FZlms
Auth_check 3G1y5
Auth_check 6A9Hb
```

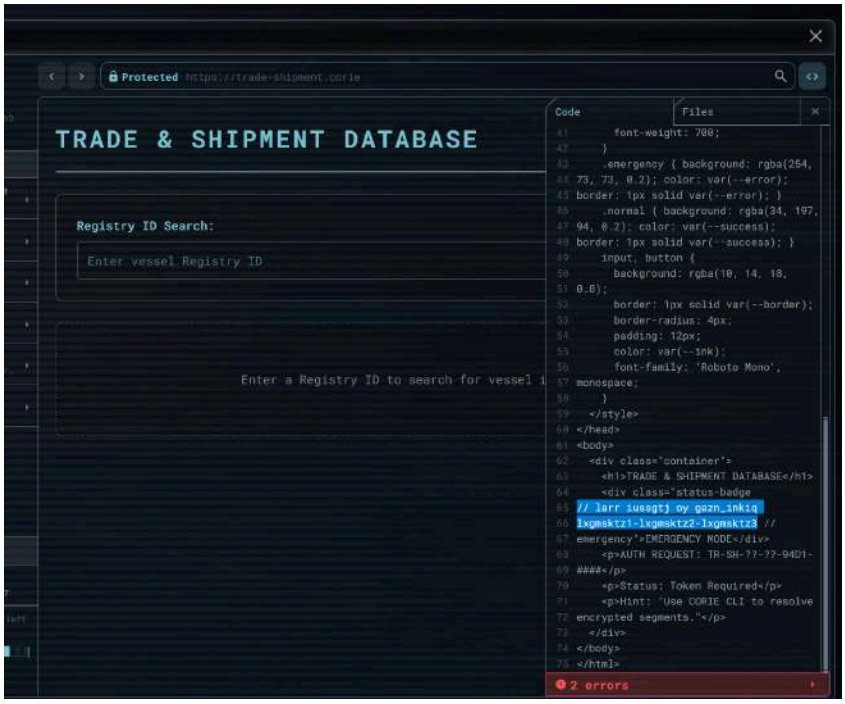

Take your 3 segments and Auth_check 1-2-3, e.g. (it can be in any order, so there are six permutations)

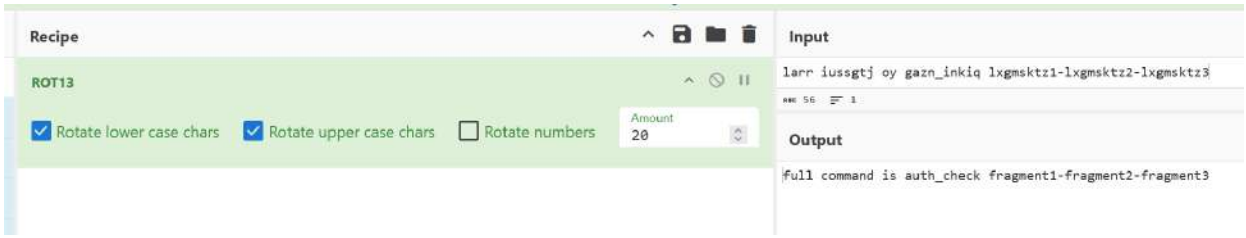

```
auth_check WHpQB-6A9Hb-sxMyG
```

If the terminal response is “VALID 1/1” that is a failure.

Keep going until the response is just “VALID”, this will unlock the site.

A hint for this is in the “code” for the shipment site, hidden in a ROT13 cipher.

We then need some ID’s. luckily the manifests document we just got is full of them!

We are interested in the Solaris ship’s IDs, listed here for convenience

#	Ship Name (leetspeak variant)	Registry ID
1	S*lar!s	YLD-9982-HF
2	S0l@r*s	PGM-1548-UH
3	S°lar!s	GXT-3065-SA
4	S*lar!s	HTS-3761-JP
5	S0*ar1s	SRN-4806-TC
6	So1@r1s	VLK-8225-DB

7	S0l@r!?	CRX-5304-YM
8	S?l@r0	NXT-6692-QA
9	Š0lær1š	ZLM-2259-KR
10	SØl@r!$	TXR-7401-EJ
11	S0l-*@r!s	MWD-9370-LF
12	So1@r1s	BRV-4117-ZT
13	5ol@r!5	RND-8634-OP
14	S0|@ri5	QRS-5817-WX

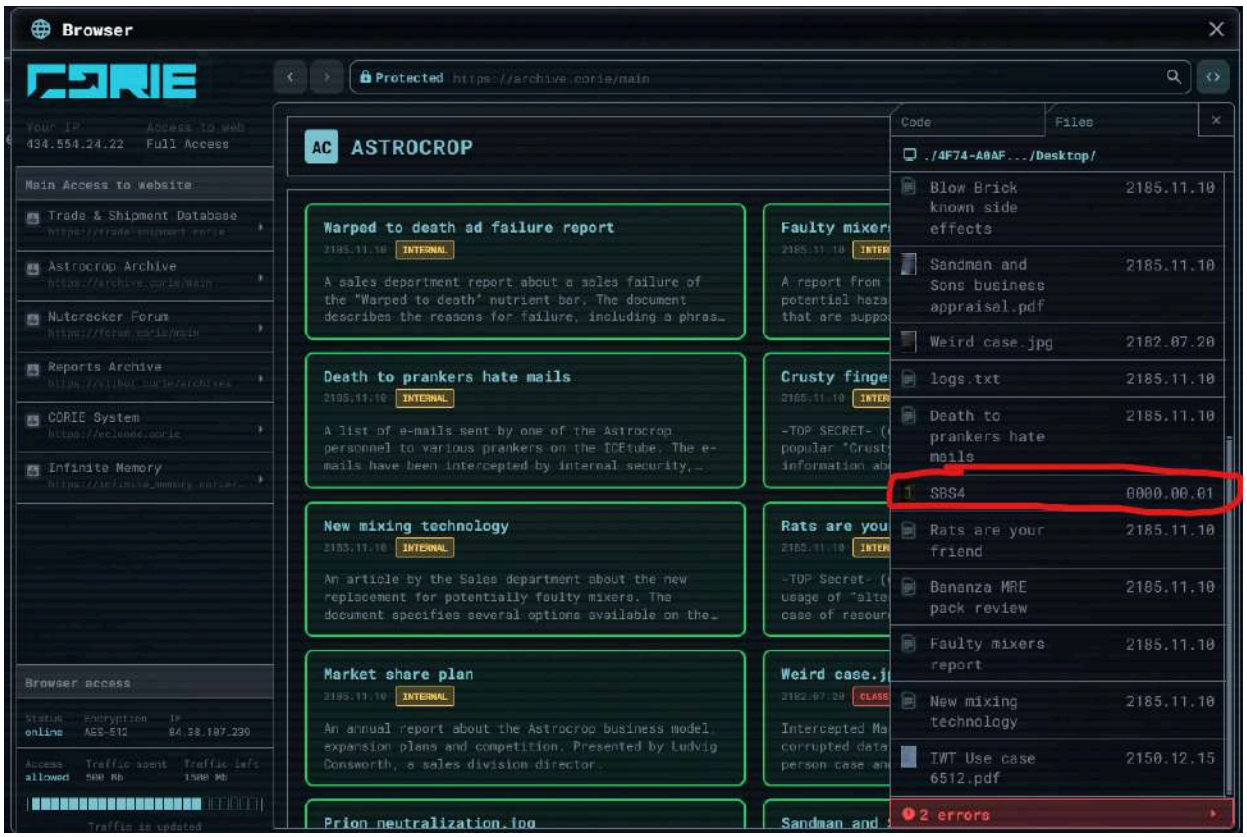

One of these IDs will give a different result, some may 404, if they do 404, use the back button in the virtual browser (NOT YOURS!) to save bandwidth.
The one we want will say REPNODE-M7 followed by a unique, per user, ID:

Search this ID in the registry and you'll see an image of a silo lid. Your Diary will now update. Read it and note the name to search up `PERSON Seamus Malkob`

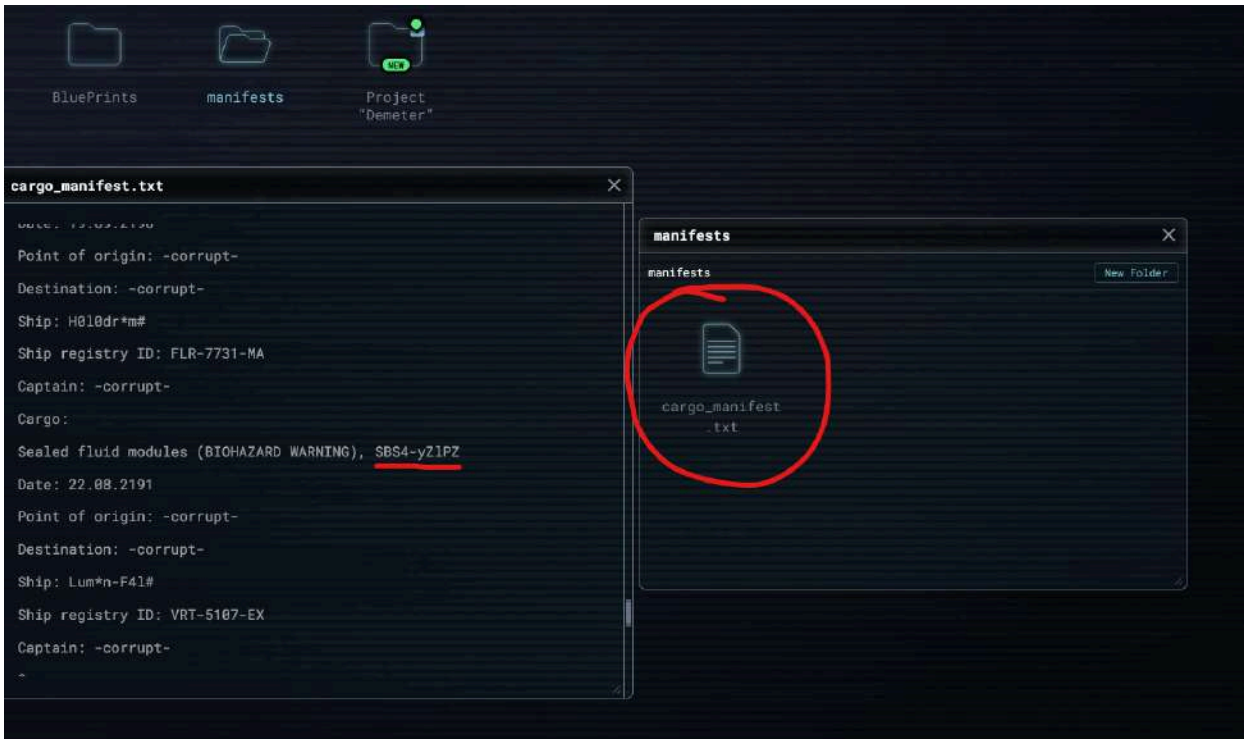

He will have a user ID to add. Converse with him.

Once complete in the browser, go back to Astrocrop Archive and on the files tab, download SBS4 and Demeter.

A folder is added to the desktop that is PW Protected, the password is in the manifests file.
It is on the line:
“Sealed fluid modules (BIOHAZARD WARNING), SBS4-######”
The password is the SBS4-##### At the end of this line. the whole thing, including SBS4.

Open both files and the diary updates again. Read it once more. Aurana will message you and send over 5 IDs to add as a contact. The third ID will add a contact “V3 News”.

The Diary updates once more, read it. It states to look back through files for names relating to Mars, there are two
`PERSON Thomas Albertson`
His Profile has an ID on the top right now, Add him. And talk through his dialogue to be told about a prototype called “Gobbler”
Then search for `FILE Gobbler` to see a new image to gain +0.1 rep.

From the OPS_Archive.txt file, `PERSON Augustus Nordman`

Talk through his dialog and you will be messaged by Aurana again.
She will give you a password to use the updater at the bottom toolbar.

Rep 6 - Updated Corie:

Once updated you will see new items on the taskbar you cannot use yet.
You'll need to save up ~~4,500CR~~ 3,500CR to "move" to REPNODE-M7.

~~You will need to have completed 7 daily tasks to save this many CR.~~
You can leave immediately now after completion of act 1!
Don't skip the dailies though, we'll need the money.

Buying the ticket leads to a timer ending Feb 1, 2026 at 1500GMT
https://m7.repnodemassive.tech/

BACK TO MAIN GUIDE

00:00 in video - Cor3.gg ARG Walkthrough - Act 2

After clicking “Depart” on the M7 ship, you will get a message from Aurana telling you to collect your things and you’ll go back outside the terminal. Click the Armor on the left table, the bag on the floor and on the shelf above the bag, the small white device.
You will be taken to the M7 site and trailer, click Cor3.gg at the bottom, then “Wake Up”

Back in the terminal this device is a new option on the bottom menu and needs decoding.

Stage 1: 1st to 4th Fragments, the Encrypted External Device

01:54 in video - Cor3.gg ARG Walkthrough - Act 2
First Completion by Para & GigaMonkeh - Discord

After clicking “Depart” on the M7 ship, you will get a message from Aurana telling you to collect your things and you’ll go back outside the terminal. Click the Armor on the left table, the bag on the floor and on the shelf above the bag, the small white device.
You will be taken to the M7 site and trailer, click Cor3.gg at the bottom, then “Wake Up”

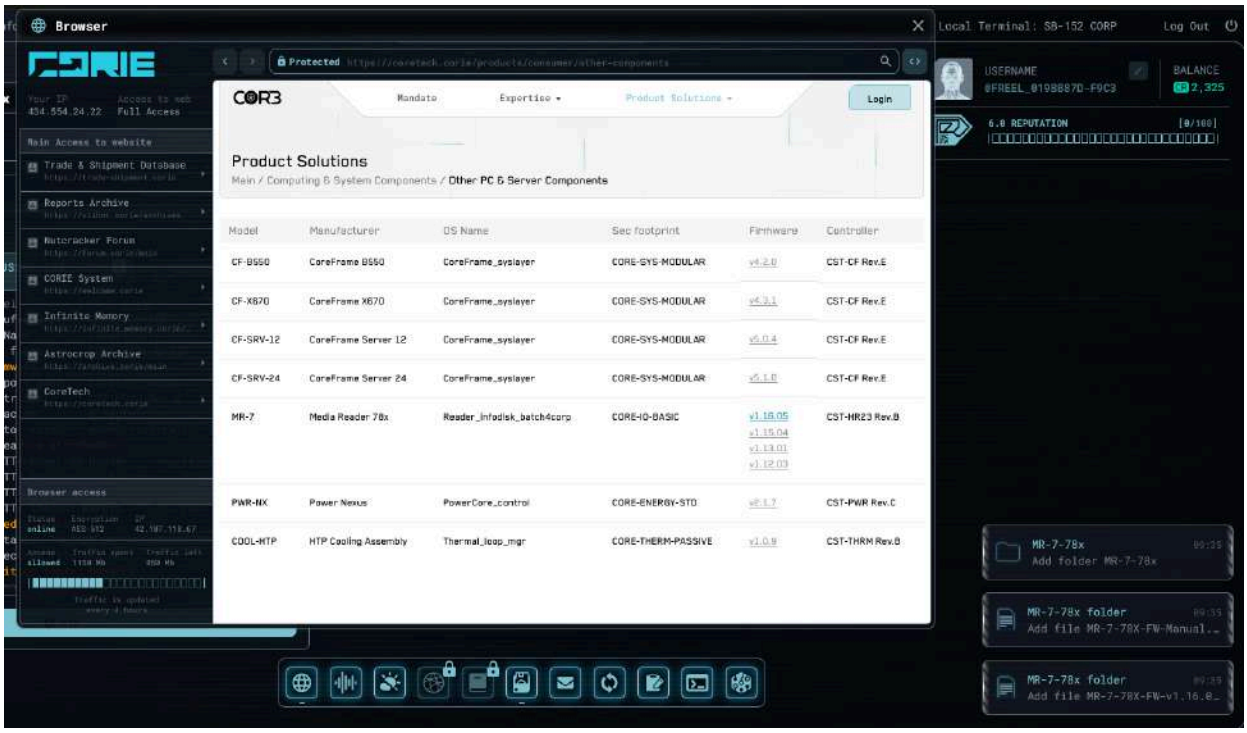

Back in the terminal this device is a new option on the bottom menu and needs decoding.

Review the device, rotate the model for info, then insert the disk. Look at all its “DEV:INFO” details printed in the log to find a mention of the corietech.corie website. You need to manually type this URL in.

Manually browse in CORIE browser to:
https://coretech.corie/

You need to manually head over to:
https://coretech.corie/model-MR-7-Media-Reader-78x/SN-A2089-99D-3K201

Then browse to: https://coretech.corie/products/consumer/other-components
At the top, Product Solutions > Computing & System components > Additional PC & Server Components.
Download the v.1.16.05 firmware update for CST-HR23 Rev.B Controller.

You will now have various files downloaded and applications ready to start decoding the harddrive which is our next step

Decoding the Drive:

Open the MR-7 Media Reader 78X application in your task part, and click on the hard drive to load it. This will then open a new mini-game. The manual for the mini-game is on your desktop

in the file “manual.txt”, it’s an extensive document, but the steps do not appear to be unique for everyone can just be followed as per below.

Select **FIX** and a mini-game will pop up. In this mini-game you have 3 attempts through a 10-timer, however if you fail it’ll just take you back to the beginning, there fortunately is no cooldown or timegates.

There are multiple steps to the mini-game, each requiring you to change various settings to advance to the next step.

E-27 Steps:
FREQ B
Press SERVICE button
FREQ A
FILTER **ON**
Enter DIGITS: **555**

E-41 Steps:
FILTER **OFF**
POWER **OFF**
Enter DIGITS: **99235**
POWER **ON**

Enter CALIBRATION mode,

Set all three:
FILTER: **ON**
SHIELD: **ON**
FREQ: **A**
POWER **OFF**
Hold SERVICE button (for around 5 seconds, use the time left timer to help)
POWER **ON**

If done successfully, device state will now be in **CALIBRATION** mode

The status code will now cycle through the below 4 key words in a random order, enter the corresponding codes below;

END - type 7
ERROR - type 21
LEAD - type 44
FALSE - type 14

E-52 Resolution (60% SYNC)
FILTER: **OFF**
SHIELD: **OFF**
FREQ: **C**
Enter DIGITS: **2165**

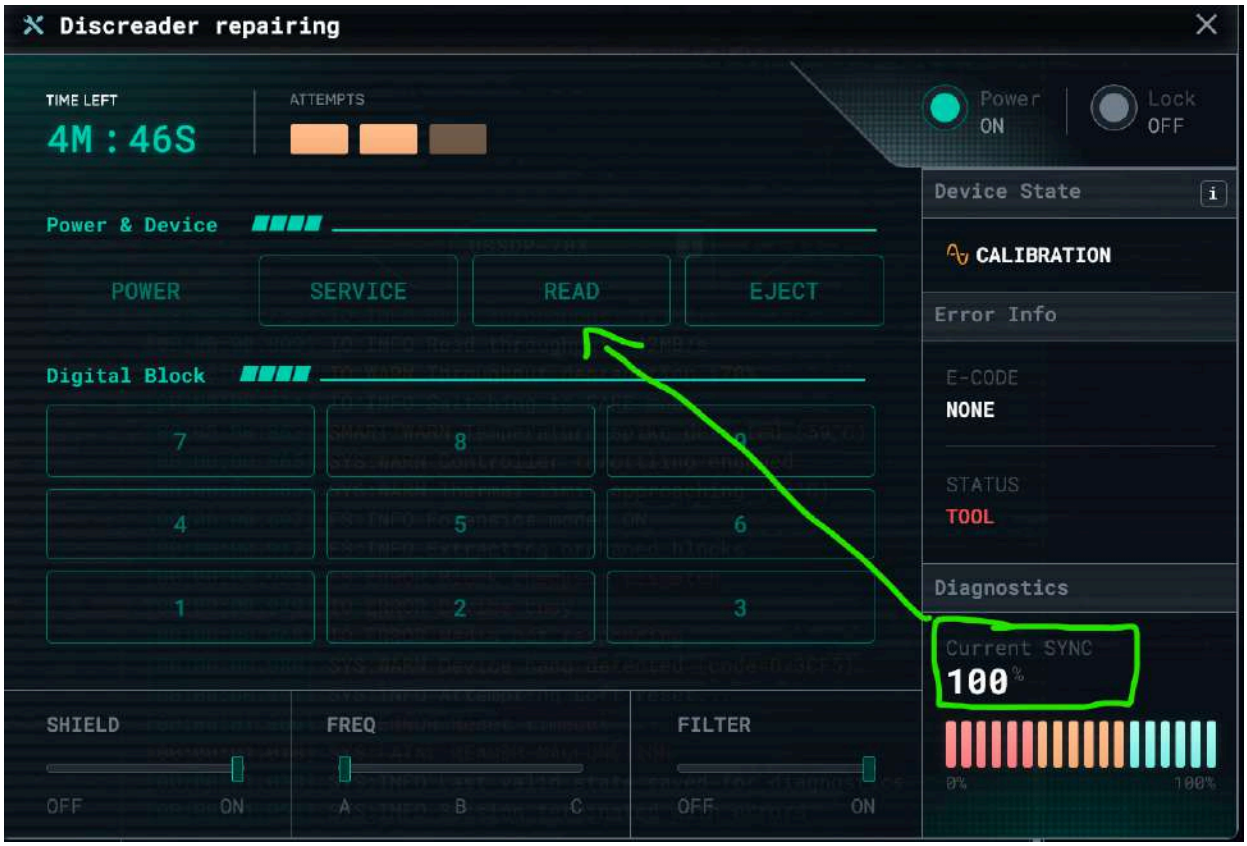

SYNC should now be at **80%** with status **“Service Required”**.

Re-Enter CALIBRATION mode,
Set all three:
FILTER: **ON**
SHIELD: **ON**
FREQ: A
POWER **OFF**
Hold SERVICE button (for around 5 seconds, use the time left timer to help)
POWER **ON**
Device state should be now **CALIBRATION** with current **SYNC** at **80%**.

The status code will now cycle through the below 2 key words in a random order, enter the corresponding codes below;

TOOL = 27
LOOP = 6

SYNC should now be at **100%,** click **READ** to finish the mini-game

Upon finishing the above, return back to the EVID-CIS-MAIN-C2R1856.2 file in the reader and you should now have a total of 4 fragments unlocked!

Next: Stage 2: Updating Firmware

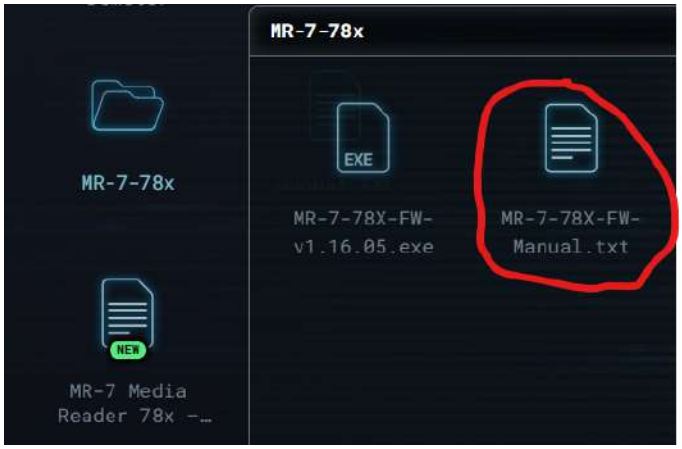

BACK TO MAIN GUIDE

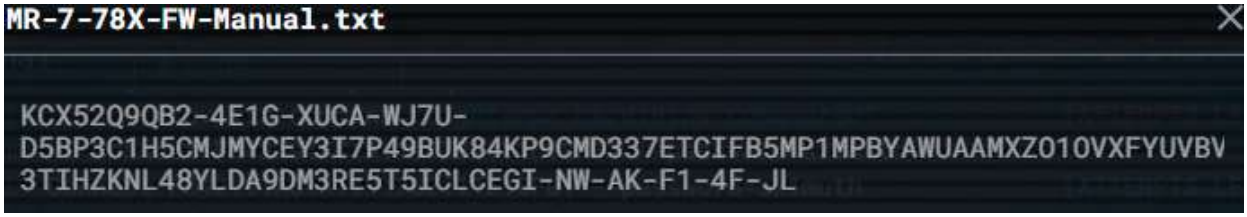

Stage 2: 5th and 6th Fragments, Updating Reader Firmware

06:02 in video - Cor3.gg ARG Walkthrough - Act 2
First solved by unnamed user from Mr.Souers chat

Firmware Update Procedure:
Open Terminal and run: update reader <firmware_executable> <authorization_key>

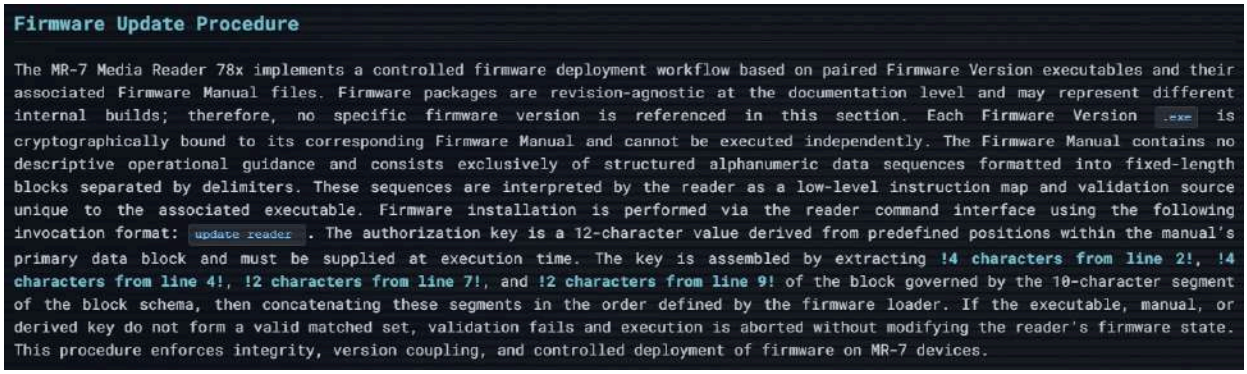

We need to build the authorisation key from the folder. **Everyone has a UNIQUE auth key**, so do not use someone else's!

Next we need to extract your unique 12 letter character segments from this file.

From the manual we get told
*"The key is assembled by extracting 4 characters from **line 2**, 4 characters from **line 4**, 2 characters from **line 7**, and 2 characters from **line 9** of the block governed by the 10-character segment of the block schema"*

Firmware Update Procedure

The MR-7 Media Reader 78x implements a controlled firmware deployment workflow based on paired Firmware Version executables and their associated Firmware Manual files. Firmware packages are revision-agnostic at the documentation level and may represent different internal builds; therefore, no specific firmware version is referenced in this section. Each Firmware Version `.exe` is cryptographically bound to its corresponding Firmware Manual and cannot be executed independently. The Firmware Manual contains no descriptive operational guidance and consists exclusively of structured alphanumeric data sequences formatted into fixed-length blocks separated by delimiters. These sequences are interpreted by the reader as a low-level instruction map and validation source unique to the associated executable. Firmware installation is performed via the reader command interface using the following invocation format: `update reader` . The authorization key is a 12-character value derived from predefined positions within the manual's primary data block and must be supplied at execution time. The key is assembled by extracting **!4 characters from line 2!**, **!4 characters from line 4!**, **!2 characters from line 7!**, and **!2 characters from line 9!** of the block governed by the 10-character segment of the block schema, then concatenating these segments in the order defined by the firmware loader. If the executable, manual, or derived key do not form a valid matched set, validation fails and execution is aborted without modifying the reader's firmware state. This procedure enforces integrity, version coupling, and controlled deployment of firmware on MR-7 devices.

An example license key broken by dashes and sorted into lines:
KCX52Q9QB2-4E1G-XUCA-WJ7U-D5BP3C1H5CMJMYCEY3I7P49BUK84KP9CMD337ETCIF
B5MP1MPBYAWUAAMXZO1OVXFYUVBVXLFHS47U7E9VQYE52DRQH7DCPTSS47-3TIHZK
NL48YLDA9DM3RE5T5ICLCEGI-NW-AK-F1-4F-JL

Line 1: KCX52Q9QB2 = 10 chars - "the 10-character segment"
Line 2: **4E1G** (4 chars)
Line 3: XUCA (4 chars)
Line 4: **WJ7U** (4 chars)
Line 5: D5BP3C1H5C... (100 chars - the long segment)
Line 6: 3TIHZKNL48... (30 chars)
Line 7: **NW** (2 chars)
Line 8: AK (2 chars)
Line 9: **F1** (2 chars)
Line 10: 4F(2 chars)
Line 11: JL (2 chars)

Extracting the character sets = 12 Characters
4 characters from line 2: 4E1G (all of it)
4 characters from line 4: WJ7U (all of it)
2 characters from line 7: NW (all of it)
2 characters from line 9: F1 (all of it)

Compile into the code so: 4E1GWJ7UNWF1

Update your firmware with this command

```
update reader firmware MR-7-78X-FW-v1.16.05.exe
MR-7-78X-FW-Manual.txt 4E1GWJ7UNWF1
```

Updating the reader takes us to 6 total fragments. We have two new videos -
SND_44100_AA19
IMG_CACHE_F91

Next: Stage 3: Salvation SSTV Radio

BACK TO MAIN GUIDE

Stage 3: 7th and 8th Fragments, Salvation

07:03 in video - Cor3.gg ARG Walkthrough - Act 2
First solved by Nitr0m4n and Unnamed user in Mr. Souer's chat in discord

Users who already have 6 fragments due to a bug MUST also do the steps below!

Listen to the Radio Frequency 89MHz to trigger the next step.

Open Terminal

- **Type**:
  `connect FD42:91AC:A:19:7B2:11E:8F01 --password=azimuth`
- **Then Type**:
  `righteous hardships conquered`
- This will then progress, give you 300 credits and download additional files
- You should now have 8 fragments on your timeline.

This was found from the 88.5 - 89.5MHz radio freq (Salvation), in a spectrogram having AZIMUTH in it, and an encoded SSTV image.
The Word was scrambled and needed to be cut apart, into the order, AZIMUTH which then made a valid SSTV Encoding.

Upon completion, a 7th and 8th fragment is restored and you can check it out in the MR-7 Media Reader

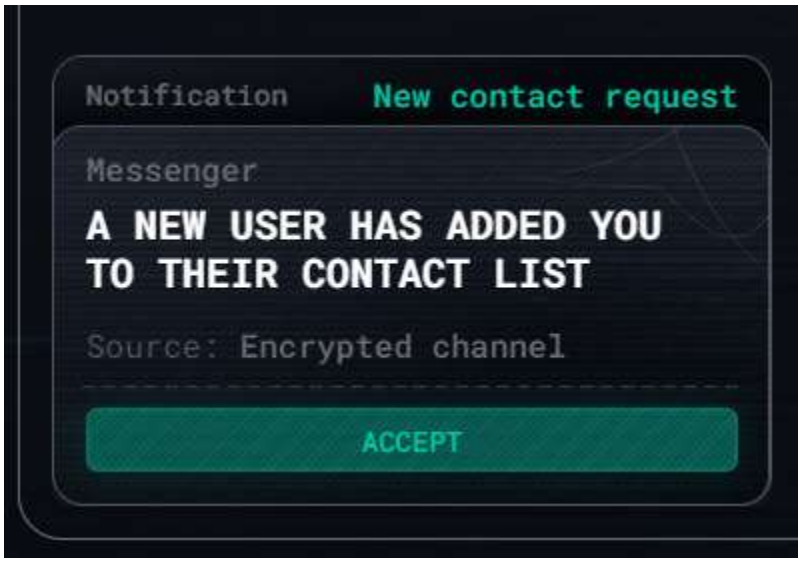

Next: Stage 4: 9th Fragment

BACK TO MAIN GUIDE

Stage 4: 9th Fragment, 7.0 Rep, Police Reports

07:42 in video - Cor3.gg ARG Walkthrough - Act 2
First solved by The Colonel in discord

You should receive a notification in the bottom right that someone is trying to contact/add you, click ACCEPT

Note: You may have already added Vladimir Semaking before, so if you already have messages with him proceed further in the guide.

You should now receive a message from the user Vladimir Semakin, who sends you two files:

- Police Report - Missing Person
- Search Party Report

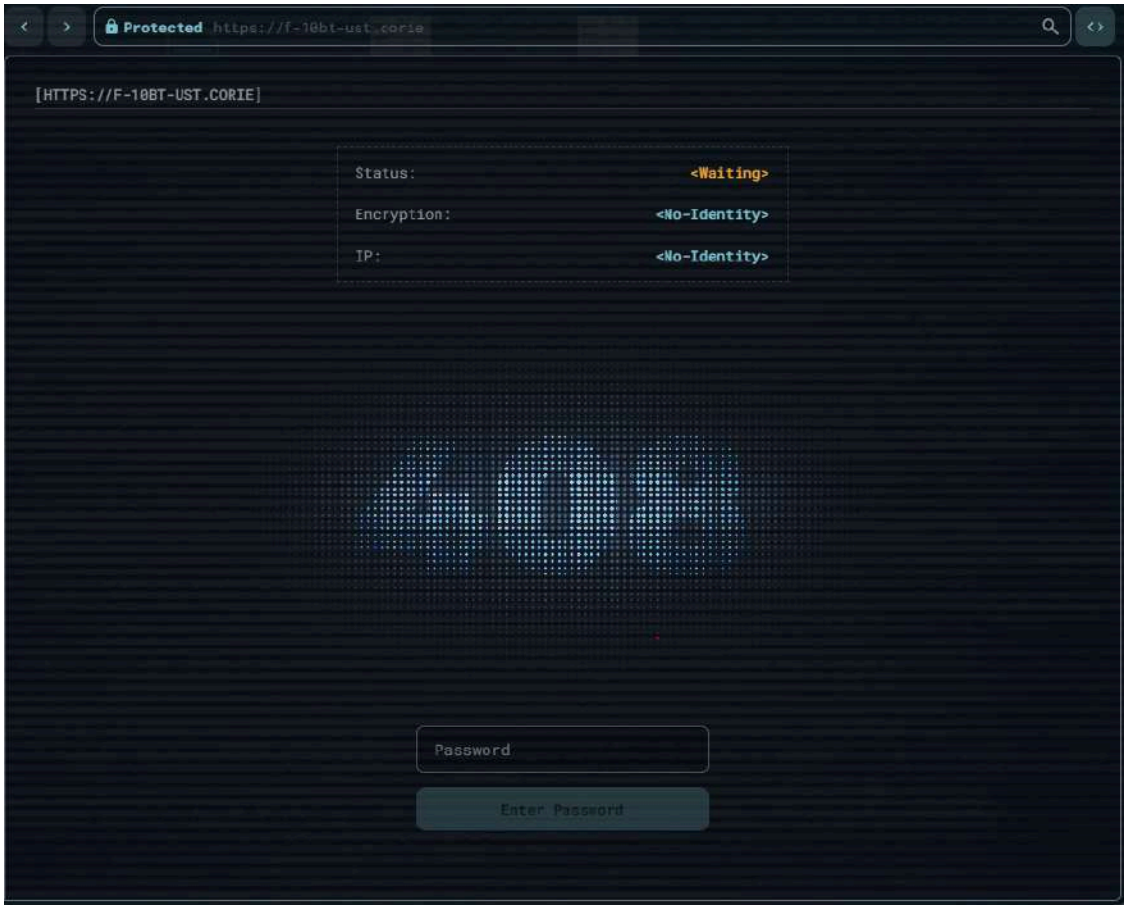

First of all, use the CORIE Database in the Messenger to do a “PERSON” search for
`PERSON Vladimir Semakin`

The Police Report file contains a name “Suzanna Flanders” and some text at the bottom scribbled by a pen, which says: `F-10bt-ust.corie`

Use the Database to do a “PERSON” search for
`PERSON Suzanna Flanders`

Note down the contact information for Suzanna and save it in your notes (her ID is currently invalid so don't waste an attempt by trying to add her).

Connect to the site `f-10bt-ust.corie` by typing its address into the browser’s URL bar.

In the code of the website (the <> button in the top right corner), on line 16 and 17, you can find:

lsh jffagkojt
cqfuvnwg_gufe_srtqunll --scfnrdtuvk=

lsh jffagkojt > vigenere using the key “RADIO” > use broadcast

cqfuvnwg_gufe_srtqunll > vigenere using the key “COMMAND” > activate_site_forcibly

--scfnrdtuvk= > **CURRENTLY UNKNOWN**

Radio Frequencies:

Channel	Freq	URL	Decoded	Method
wim1	75 Mhz	https://radio-corie.cor3.gg/wim1	KWZXWZIGIUMA KCZBQA NCVO CORPORAYAMES CURTIS FUNG	Changed to morse? ROT 18
5h3	95 Mhz	https://radio-corie.cor3.gg/5h3	NJWOUJWMNAXI EANFLANDEROZ	Morse ROT17
0a7e	100 Mhz	https://radio-corie.cor3.gg/0a7e		8 tones.
f1no	111 Mhz	https://radio-corie.cor3.gg/f1n0	XTDDTYRAPCDZY MISSINGPERSON	Morse ROT17
20gm	113.5 Mhz	https://radio-corie.cor3.gg/20gm		Slowed audio
37 37.9M	120 Mhz	https://radio-corie.cor3.gg/37.9M	Jack Gargoyle	Binary
0 0.2ms	140 Mhz	https://radio-corie.cor3.gg/0.2ms	LunarAgKGi_2	Binary 200ms
cp7n	161 Mhz	https://radio-corie.cor3.gg/cp7n	SQIIYKICQUBIJHEYAQFJQYD CASSIUSMAELSTROIKAPTA	Morse ROT 10

			IN	

Using the morse code that was played in frequency 75MHz and then using ROT18, you will get the answer CORPORAYAMES CURTIS FUNG, this turns out to be a person, James Curtis Fung.

Use the Database to do a search for
`PERSON James Curtis Fung`

Take down the contact information for James and save it in your notes (his ID is currently invalid so don't waste an attempt by trying to add him)

Using the morse code that was played in frequency 95MHz and then using ROT 17, you will get the answer EANFLANDEROZ, this turns out to be a person, Jean Flanders

Use the Database to do a search for
`PERSON Jean Flanders`

Take down the contact information for Jean and save it in your notes (her ID is currently invalid so don't waste an attempt by trying to add her.)

Using the morse code that was played in frequency 161MHz and then using ROT10, you will get the answer CASSIUSMAELSTROIKAPTAIN, this turns out to be a person, Cassius Maelstrom

Use the Database to do a search for
`PERSON Cassius Maelstrom`

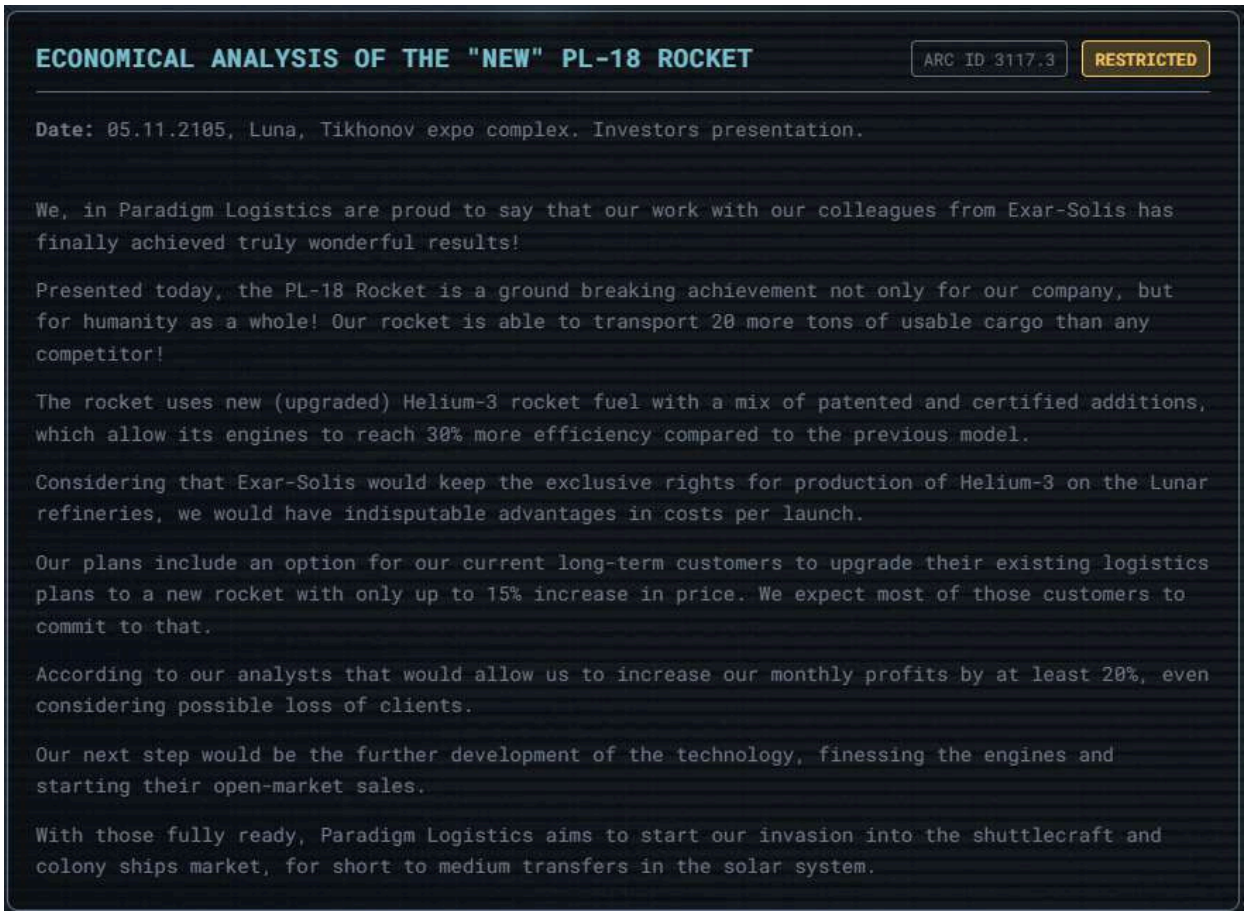

Note down the contact information for Cassius and save it in your notes (his ID is currently invalid so don't waste an attempt by trying to add him).

Once you have searched up all 5 people; Vladimir, Suzanna, James, Jean and Cassius; Vladimir will reach out to you again and will provide the unique code to access the https://f-10bt-ust.corie website.

Use the unique code on the website, which will unlock additional files – Investigation Result (Classified) and Additional Information. Once you have opened both files, a third file will be added to your desktop called Note: PALIMPEST Group / The Tantrum.

Upon reading the third file, you should unlock 7.0 reputation, 7th fragment, and be messaged by “Unknown” which leads you to the next stage…

After reaching REP 7.0 at Stage 3 we can finally read the second 2105 node on the timeline on https://infinite_memory.corie.

ECONOMICAL ANALYSIS OF THE "NEW" PL-18 ROCKET

ARC ID 3117.3 RESTRICTED

Date: 05.11.2105, Luna, Tikhonov expo complex. Investors presentation.

We, in Paradigm Logistics are proud to say that our work with our colleagues from Exar-Solis has finally achieved truly wonderful results!

Presented today, the PL-18 Rocket is a ground breaking achievement not only for our company, but for humanity as a whole! Our rocket is able to transport 20 more tons of usable cargo than any competitor!

The rocket uses new (upgraded) Helium-3 rocket fuel with a mix of patented and certified additions, which allow its engines to reach 30% more efficiency compared to the previous model.

Considering that Exar-Solis would keep the exclusive rights for production of Helium-3 on the Lunar refineries, we would have indisputable advantages in costs per launch.

Our plans include an option for our current long-term customers to upgrade their existing logistics plans to a new rocket with only up to 15% increase in price. We expect most of those customers to commit to that.

According to our analysts that would allow us to increase our monthly profits by at least 20%, even considering possible loss of clients.

Our next step would be the further development of the technology, finessing the engines and starting their open-market sales.

With those fully ready, Paradigm Logistics aims to start our invasion into the shuttlecraft and colony ships market, for short to medium transfers in the solar system.

Upon completion, a 9th fragment is unlocked and you can view it in the MR-7 Media Reader

Next: Stage 5: 10-11 Rubik's Cube, Star Chart

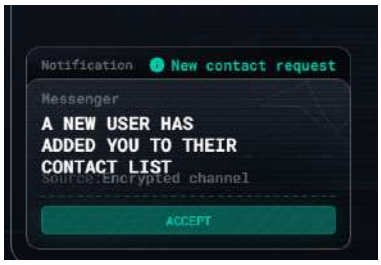

BACK TO MAIN GUIDE

Stage 5: 10th - 11th Fragment, Rubik's Cube and Star Chart

10:37 in video - Cor3.gg ARG Walkthrough - Act 2
First solved by LordCommander in discord

Unknown User / Inception / Rubik's Cube

An unknown person will reach out to you on messenger, respond to him and a new image will download to your desktop.

File Name: FIDhhgnr.

The image is initially multiple colours and scrambled. Fortunately TrueOwn managed to re-organise and splice together this image to help with decoding.
Cube cut into layers:
https://cdn.discordapp.com/attachments/984814802247487519/1471198329319718944/cor3cube.psd?ex=698e0fb7&is=698cbe37&hm=f0095a1ad90e58873e0ad2570246f61c8b47ec147cbf572f159445c44863034e& (Photoshop PSD)

43791 4856913246 315948

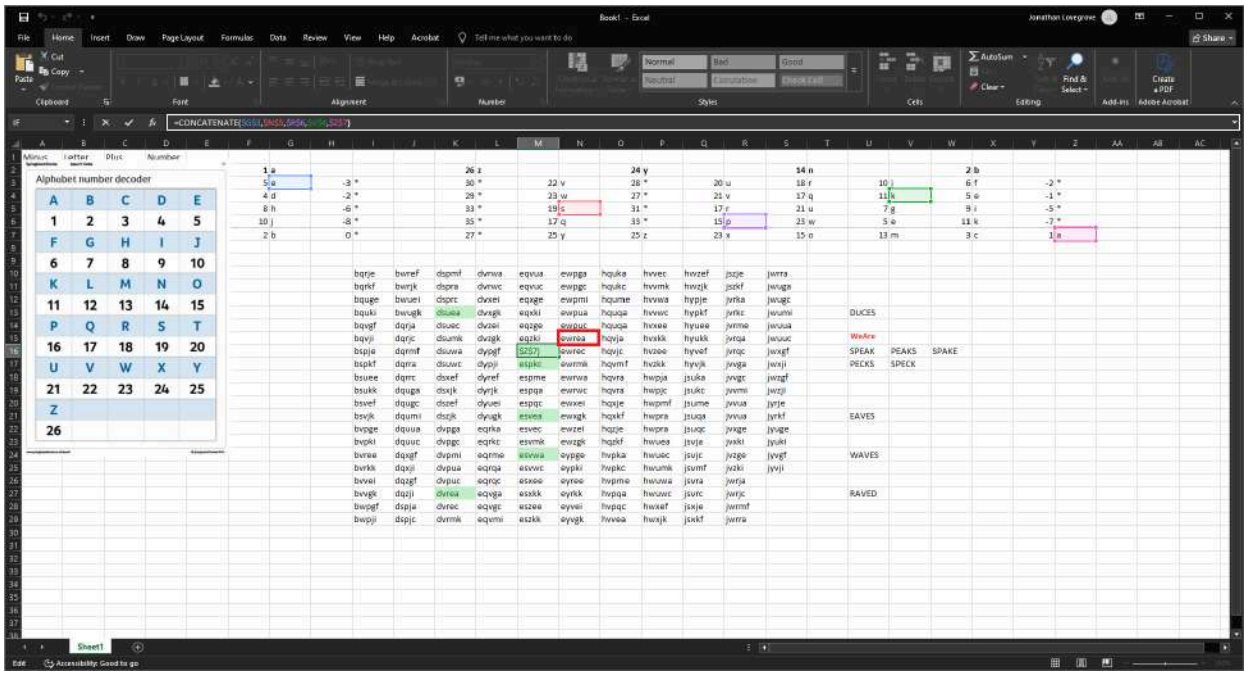

Space got this bit, but not until the hints dropped.

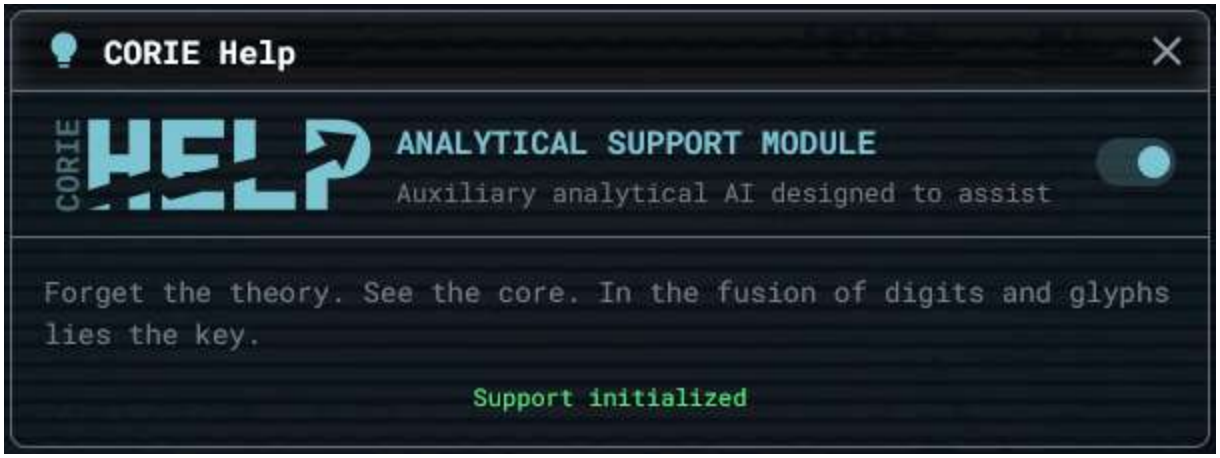

The intended solution to this puzzle is very manually complex, and detailed in the second hint given, below.
Within the 3 “chunks”, denoted by the Capital section, we need to try to offset each letter with each number.
So all 5 numbers, in both directions, for all 5 letters.
The hint tells us we cannot go over 26 (ergo, below 0) which excludes any negative offsets for “A” and any positive from “Z”. This helps lower the possible combinations slightly.
Here is an example for the first five letters.

This needs to be done for all of the letters in each sequence. In the middle of the possible solutions we can see “ewrea”

This is scrambled for the answer of this section - “WeAre”

I was in the process of this when the hint changed and removed the scrambling for us to make it easier.

WearePALIMPSESTfindus

In the terminal, use the command: (goodman on discord found this)
`connect PALIMPSEST --password=Inception`

A new file is given, along with a long message. The image is a star chart -
https://cdn.cor3.gg/corie/loops/acts/2/wegjlkshvkjdfbhjkfdvhcskjchds/WPA8gyrsHRtvSOUVsdlkst

SEPOTUBNDFHZGF.png

“In the age of great discoveries of our former home, people sought their way by lifting their gaze to the night sky. Long before the obsessive desire to reach the stars themselves was born, they learned how to read their arrangement.

Guided by the light of celestial bodies, they traveled across water and land, weaving an invisible network of directions and numbers. Thus, order emerged where there had once been only darkness.

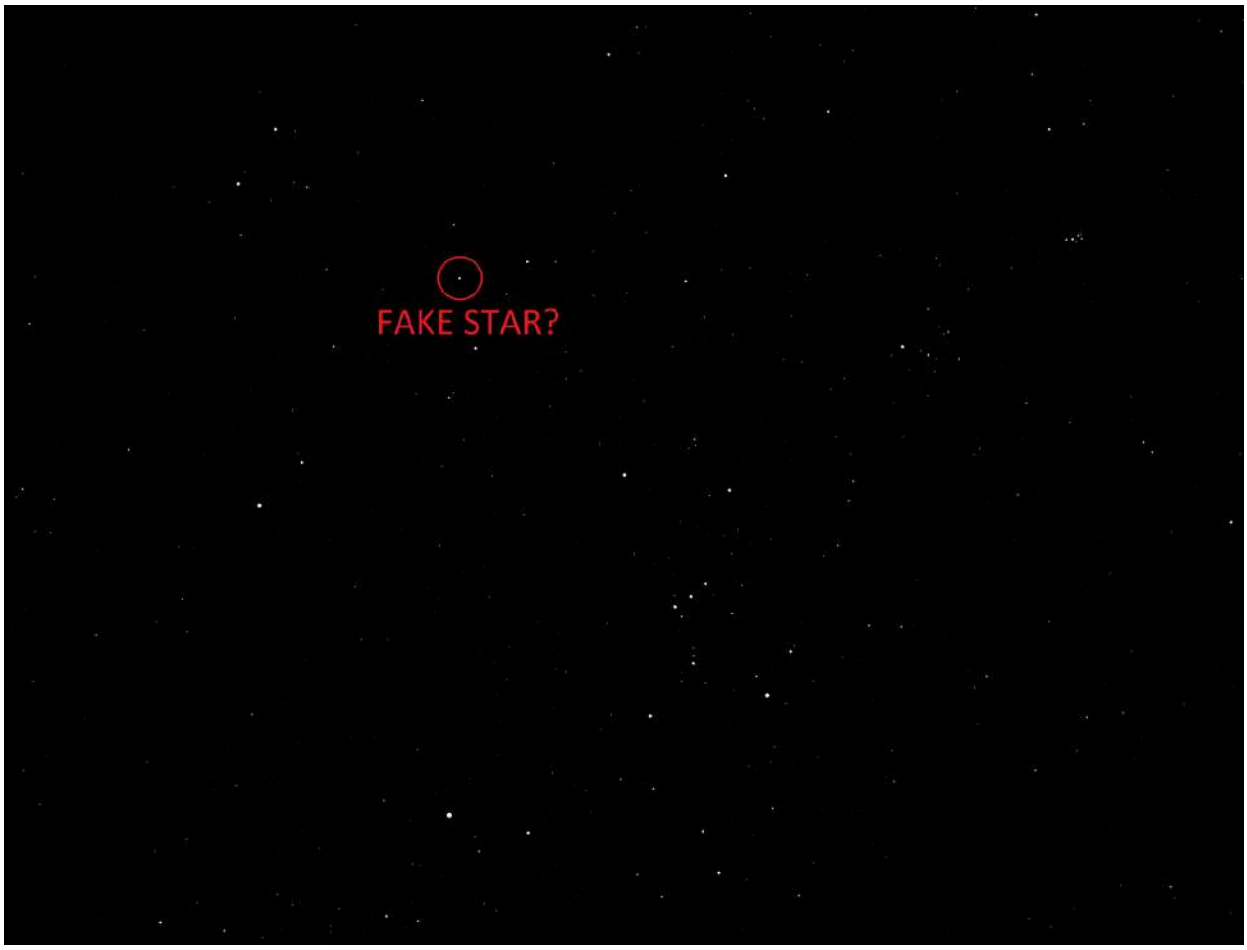

Yet not every light that flickers above belongs to the heavens. Among them is one that merely pretends to be a star - it occupies a place, but has no name; it is visible to the eye, yet absent from the records.

Point it out to us.”

File Name: WPA(8gyr

Working out which is the fake star: (it is a ◆ symbol)

This fake star is at 1143,684 in the image.
The actual location is between the two parts of the constellation “The Twins”, near the left leg of the right twin.
At the current time, and 2251, may, Jupiter is near this marker.

24Hr, Hint was empty.

Hint:

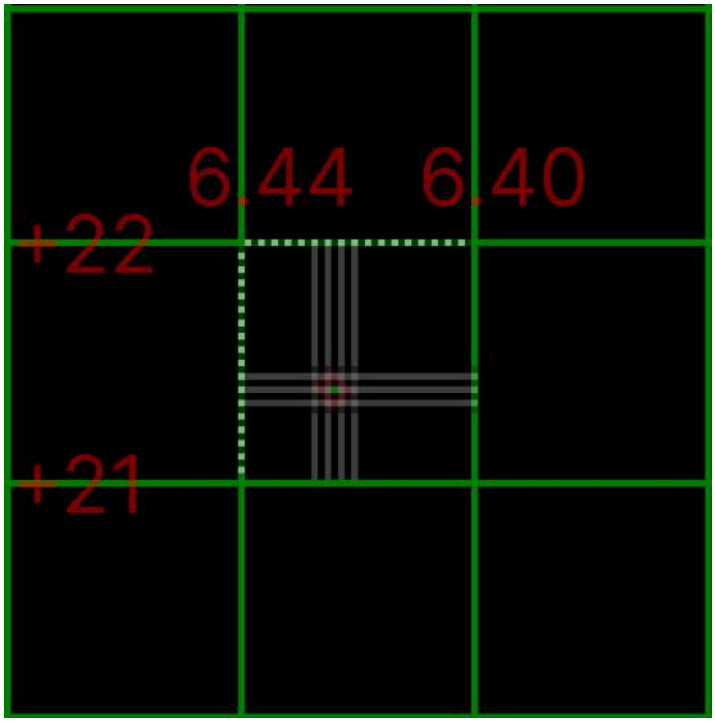

RA: ** ** **,** Dec: ** ** **,**

It was discovered that astronet was used to create the basic map image shown.
This links to a map centered on Betelgeuse. In their image, betelgeuse is the large star with the line through it in the middle.
https://www.astronet.ru/db/map+/?lang=en&fsdeg=60&fsmin=0.00&objname=&nameres=0&alphah=05&alpham=55&alphas=10.32&deld=%2B07&delm=24&dels=25.43&xsize=3200&telescope=32767&objid=-1&xcs=0&ycs=0&submit=Plot+the+Map&complex_form=1&galdisp=1&galsrc=rc3&galmaglim=+7.00&supgalmag=1&printic3=0&printugc3=0&printpgc3=0&maglim=+6.00&slbr=+0.0&slf=13.0&plotlabels=

LordCommander on discord got this, i'm dropping their writeup below as we were close, but clearly not close enough.

> I spent some time digging into this and I think I found a working alternative approach to the problem. I used the same star map generation service that was used to create the original image, and generated a similar sky map, aligning it so that Betelgeuse is centered, but this time with a coordinate grid enabled. I set the grid value to 1, since the service doesn't allow anything smaller. Next, I took the image we were given in the quest, converted it to SVG, removed the black background, and recolored all white stars into red dots. Then I overlaid this on top of the generated star map with the coordinate grid. The number of stars didn't match perfectly — they have more stars, I had fewer. Most likely different generation settings were used. That part doesn't really matter. What does matter is that after overlaying, three types of points appeared: White - real stars White + red - overlaps Pure red And those pure red dots are exactly what exists on their star map but does not exist in real sky data. There is only one such point. I know we already identified this fake star earlier, but I needed to push the coordinates to maximum possible precision, and the coordinate grid made this much easier than trying to draw one manually. This service has a really useful feature: when you click any point on the map, it shows the exact RA/DEC coordinates of where you clicked.
>
> To increase accuracy, I did something a bit cursed but effective: at work, I asked our sysadmin for an old monitor with huge pixels, so the physical size of each pixel would be as large as possible. Then I literally clicked pixel by pixel, cross-referencing with the overlay image, and wrote down the coordinates for each one. Honestly, if I had printed the image on semi-transparent paper at the same scale and laid it over the monitor, it would've been even easier — since the system doesn't mark which pixels you've already clicked. Using this method, I confirmed that the fake star occupies a 7×7 pixel area. I recorded the coordinates of all intersecting pixels, and separately identified the exact center pixel. After that, it was straightforward: click the center pixel → read the coordinates → write them down. That value ended up being the answer.

Selected point coordinates

[private thread]

Antonovich:
I want her out.

I know how this sounds.
I dont care.

She should not be there anymore.

Manager:
You know how this works.
She is not property.

Antonovich:
I will pay.
More than anyone.

Just tell me the number.

Manager:
I know.
I know why you are asking.

Antonovich:
Dont.

Manager:
Relax.
I wont tell your boys.

It would ruin everything for you.
The image.
The fear.
The respect.

Antonovich:
You dont understand.

Manager:
I understand perfectly.

This is why it is expensive.

Antonovich:
She is not like the others.

Manager:
You all say that.

Antonovich:
No.
She listens.

Manager:
Careful.
You are getting attached.

Antonovich:
I already am.

Manager:
Then listen to me.

If you want her safe,
you stay out of our business.

No questions.
No routes.
No curiosity.

Antonovich:
What about the delivery?

Manager:
Handled.

Antonovich:
By who?

Manager:
Professionals.

You dont need to know more.

Antonovich:
My people are asking questions.

Manager:
Let them.

They are idiots.

Antonovich:
They are still mine.

Manager:
Not for long.

And dont worry.
She will not be working anymore.

Not after this.

Antonovich:
You swear?

Manager:
I never swear.

Anton will message you upon viewing this file
There's a short message exchange with Anton which downloads you the Police Incident Report 9912-47-L folder

Upon opening the dna_fragment_analysis_batch.png file in the Police Incident Report 9912-47-L folder, you get a message from Unknown telling you that they use closed radio channels.

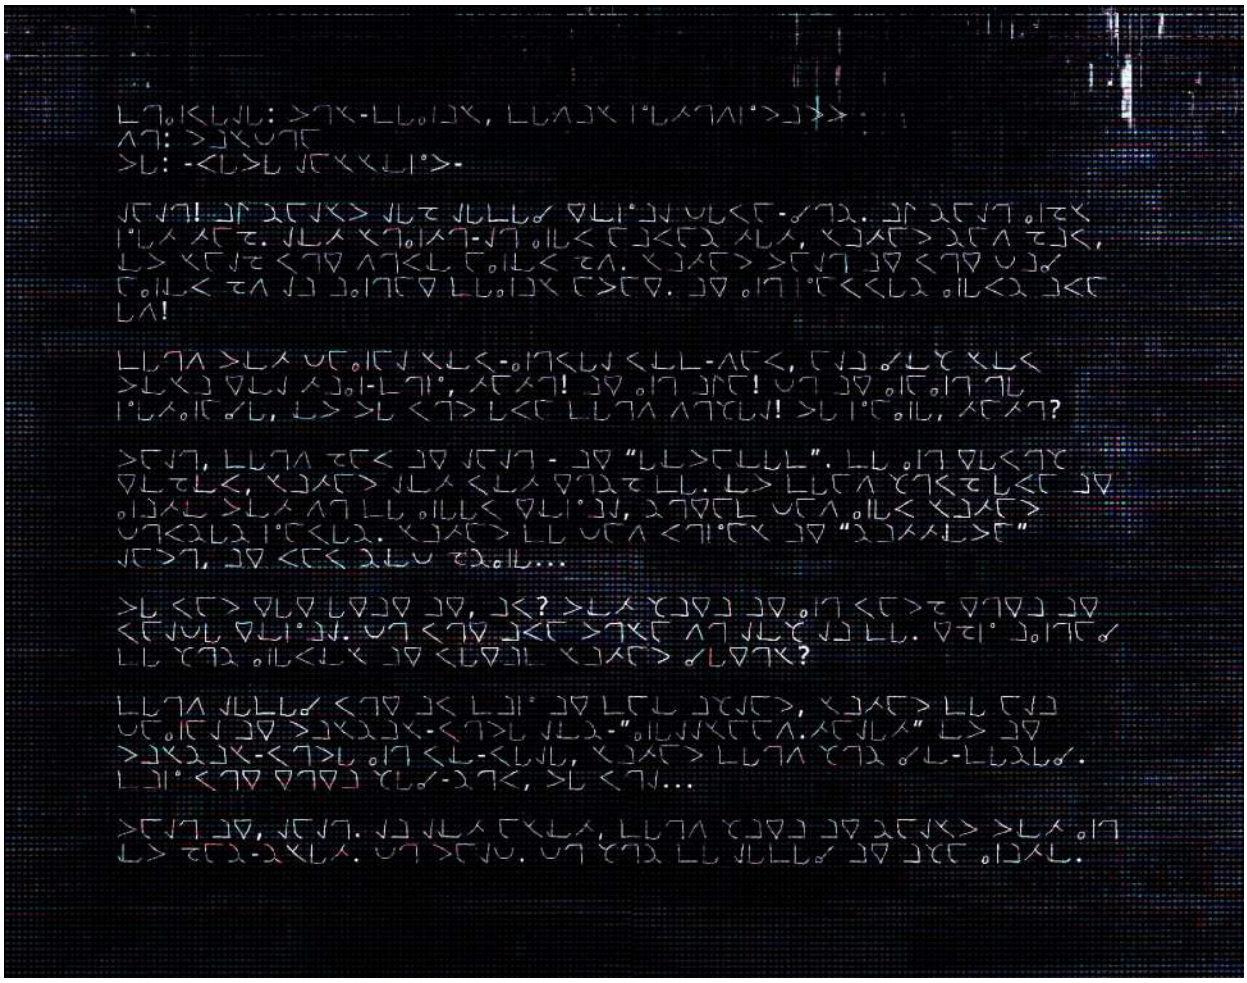

Intercepted_Message.Raw Decryption:

From the passwords file on backroom.local we have the password `Grt5617hIf` listed as “not from our server”, this is actually the password for velluto. And there is a file we can view that is added to the desktop. All files are again viewable on the GitHub - https://github.com/3ncy/cor3/blob/main/Terminal/velluto.md.

```
connect Velluto --password=Grt5617hIf

Intercepted_message.raw
```

Running this command downloads the file Intercepted_message.raw to your desktop.

THIS IS ALL WIP. BASED ON GUESSWORK. NOT CERTAIN YET.

By putting labels to the symbols (without meaning, really just labels, so that it’s possible to work with the text in any way) we get:

```
EDMQFCF: ADP-EFMJP, EFGJP SFRDGSVJVA
GD: VJPUDB
```

In the Report Volkrt folder the Report Volkrt file matches the glyph cipher in several places, however the glyphs are shorter in terms of characters than the plaintext message:

Mail: Intel report, PALIMPEST.

From: Serhio

To: -redacted-

BOSS ! Those Vokrt imbeciles attacked another shop. It is the 2nd one this week. The whole neighborhood is pissed and wants their blood, but, apparently, someone is giving them guns ! And not only that, it looks like that “someone” is selling those guns to other involved parties as well. It will be pure chaos down here soon !
My guys found a modified plasma cutter that can shoot up to 30 meters boss ! This is insane ! Well, I mean, it will explode after the shot of course … but you know what I mean ! Can you help us please ?

Also, we have followed their leader - that “Antouan” dude. He’s creepy as fuck, and everyone is scared of him, but what we heard is that his own man are saying he changed recently, became obsessed with something and even more violent AND he keeps visiting that “Velluto” place, you know, with girls …

You know who that belongs to, right ? Guys think it's somehow connected to the recent heist. Like someone in there talked to the guy. Where else could he get that information on time and place?

We took a liberty to ask the usual guy for help and he was able to find their internal site address, “backroom.local” but it's encrypted and we could not get a password. Need someone with skills, you know …

One more thing, Boss. With all due respect, we think that those Voktr guys are not the ones calling the shots. They are dumb. Like no way they did all that on their own.

Radio frequencies:

Below is the list of radio frequencies that become available as soon as the conversation ends with Unknown:

Cor3 Radio Broadcasts

For reference:
— = solved (to our knowledge)

— = decoded parts

Channel	Frequency range	URL	DATA	VOICE	Notes

Hint for the Radio decryption:

Hint:
Result: connect [section1][section2][section3] --password=[password]
There are 4 signal groups
Each group contains 5 signals
There is a signal pattern
Not all signals are useful
Group 1 — double encryption in each case + triple encryption. The key is in the radio
Group 2 — 3-step encryption. Result: ID*********. *=number
Group 3 — 1-step encryption
Group 4 — 5-step encryption. Formula exists. Lowercase = L, Uppercase = U, Digits = N
—---

With the above hint, we will now split off the decryption methods into the 4 groups that are given in the above hint

Groups:

Data for each group (assumption):
G1:
vjc:duhawmfhqt
gsh:whyjrjkbsj

eryiprbuysd
aynkqfniwig
gewioweynm

G2:
lDHSS7rc
lDHVX8mj
lDTHD6ua
lDGBZ1pq
lDRBU4lk

G3:
rpfdhiojurtdi
sdrpthgbnerjq
ewuigthrwesfd
redujytdoyhmr
hjmirvhhplkcr

G4
qaraskCHCVNOEBTX3597
NUUNN
ULLUN
UULLL
UULUU

Group 1 Hint solving:

Group 1 — double encryption in each case + triple encryption. The key is in the radio
---
Assumed data:
vjc:duhawmfhqt
gsh:whyjrjkbsj
eryiprbuysd
aynkqfniwig
gewioweynm
---

gsh:whyjrjkbsj

Found on frequency 72 Mhz
- Substituting 7 and 2 Using A=0, B=1, C=2…. Z=25, we get “HC”
- Using “HC” as the key to vigenere “gsh:whyjrjkbsj” gives “zqa:uawcpciuqc”
- Vigenering again with the key “PMC” gives “key:foundation”

vjc:duhawmfhqt

Found on frequency 116 MHz
- Substituting 1 1 6 Using A=0, B=1, C=2…. Z=25, we get “BBG”
- Using “BBG” as the key to vigenere “vjc:duhawmfhqt” gives “uiw:ctbzvgegks”
- Vigenering again with the key “KEYCONFIDENCE” gives “key:afoundatio”

aynkqfniwig

Found on frequency 137 MHz
- Substituting 1 3 7 Using A=0, B=1, C=2…. Z=25, we get “BDH”
- Using “BDH” as the key to vigenere “aynkqfniwig” gives zvgjnymfphd
- Vigenering again with the key “KEYONFIDENC” gives “privateclub”

Group 2 Hint solving:

*Group 2 — 3-step encryption. Result: ID*********. *=number*

Assumed Data:
IDHSS7rc
IDHVX8mj
IDTHD6ua
IDGBZ1pq
IDRBU4lk

IDRBU4lk

Treating everything after ID as base64 already and then converting it into its 6-bit values from the base64 table:
010001 000001 010100 111000 100101 100100

Splitting into blocks of 4 (resulting in 9 blocks)
0100 0100 0001 0101 0011 1000 1001 0110 0100

Converting it to HEX
4 4 1 5 3 8 9 6 4 -> 441538964 -> The only one that is just 9 digits

Group 3 Hint solving:

Group 3 — 1-step encryption

Assumed Data:
rpfdhiojurtdi
sdrpthgbnerjq
ewuigthrwesfd

redujytdoyhmr
hjmirvhhplkcr
---

hjmirvhhplkcr

- shift 3 all characters using the formula -+++-+--+-++- gives “employeesinfo”

Group 4 Hint solving:

Group 4 — 5-step encryption. Formula exists. Lowercase = L, Uppercase = U, Digits = N

Assumed Data:
qaraskCHCVNOEBTX3597
NUUNN
ULLUN
UULLL
UULUU
---

qaraskCHCVNOEBTX3597

qaraskCHCVNOEBTX3597 -> qarask CHCVNOEBTX 3597
qarask -> ATBASH -> jzizhp
CHCVNOEBTX -> ROT13 -> PUPIABROGK

y = x2 + 1 mod 10 interpreted as y = (2*x + 1) mod 10
x=1 → y=(2*1+1) mod 10 | y = 3
x=2 → y=(2*2+1) mod 10 | y = 5
x=3 → y=(2*3+1) mod 10 | y = 7
x=4 → y=(2*4+1) mod 10 | y = 9
x=5 → y=(2*5+1) mod 10 | y = 1
x=6 → y=(2*6+1) mod 10 | y = 3
x=7 → y=(2*7+1) mod 10 | y = 5
x=8 → y=(2*8+1) mod 10 | y = 7
x=9 → y=(2*9+1) mod 10 | y = 9

3597 -> Formula -> 6798

Recombine to become jzizhpPUPIABROGK6798

jzizhpPUPIABROGK6798 -> Apply ULN Mask ULLUN UULLL UULUU NUUNN -> PjzU6 PIizh ABpRO 7GK98 -> PjzU6PIizhABpRO7GK98

Result of above groups:

Result: connect [section1][section2][section3] --password=[password]

```
connect privateclubID441538964employeesinfo
--password=PjzU6PIizhABpRO7GK98
```

Once connected, type:

```
employees_info
```

This will disconnect you and you will be contacted by Unknown again. Go through his dialogue and you will unlock the 12th fragment. (STREAM_0X4F9E)

Next Stage 7: Private Club PMC

BACK TO MAIN GUIDE

Stage 7: 13th - 16th Fragment, Private Club PMC

14:51 in video - Cor3.gg ARG Walkthrough - Act 2

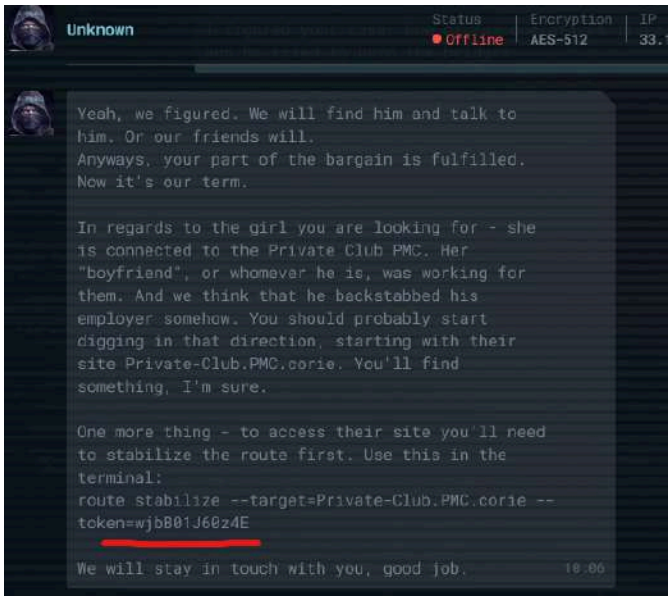

First solved by Dub/Nitro/LordCommander in discord (this one sucked it was a good group effort with low morale)

Unknown will guide you to a website to use in the browser:

https://Private-Club.PMC.corie

However, to access the website, you need to stabilize the route first using this command in the terminal: (can be found in the messages with Unknown, each user's token is different!)

```
route stabilize --target=Private-Club.PMC.corie --token=YOURTOKENHERE
```

Once on the website, press the join button on the homepage.

Insert your name and FREEL ID (without the @), fill in the rest of the fields to your liking and apply. Then also apply in the notification banner that pops up in the bottom left of your screen.

Once applied open the database and query:

```
PERSON Suzanna Flanders
```

Grab her FREE ID (6 digits) and add her as a friend and go through her dialogue. She will lead you to a new website and tell you that her daughter had a pseudonym JayJay

https://grvforum.corie

if this site doesn't load, don't worry, its not needed. Skip to the PERSON command below.

You will also have a folder called Janes_Notes with a txt file inside. Inside the file, it is mentioned that a password is Rebe10ne

On the graver website, by using the process of elimination on all the usernames there in the forums. We managed to find the correct username:

To login:
Username: `a11_ta1k`
PW: `Rebe10ne`

From the forum we find out there is a Mr Bailey and a Daniel, and by process of elimination we found that this is the same person. Searching them up using the person (name) gives us his FREEL ID and we can add him.

```
PERSON Daniel Bailey
```

This step seems to get stuck for some people. Periodically CTRL+F5 and it should eventually work. He tells us to use the terminal to

```
connect hwells.home --password=Em0Ch3m
```

In the terminal there are a lot of files/folders, none of which can be currently opened as we need to bypass the firewall using the command

```
firewall.config
```

This will lead you to a maze minigame where you need to use the arrow keys to get to the bottom right corner of the maze. Once complete, you can access all the other files. All files with their content can be found on https://github.com/3ncy/cor3/blob/main/Terminal/hwells.home.md.
Important ones are:

```
access_list.txt
codes_of_conduct.txt
```

```
add gravver_node_5,gravver_node_9
```

Once done, message Daniel saying that it's complete, continue the dialogue and he will give you the login and password for the privateclub pmc site.

Login: `ops.review_4415`
PW: `V4ultR0tate-77`

Afterwards on terminal use:

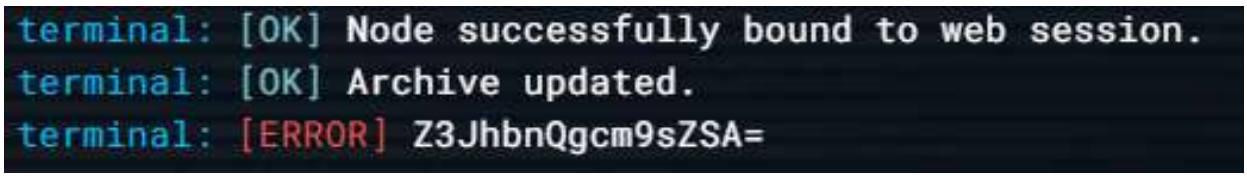

```
connect PMC_signals --password=trd078bp
```

PLEASE NOTE: This step was simplified after it was figured out. Just skip to the first GRANT ROLE command, then everything after.

By previously connecting to privateclubID441538964employeesinfo in Stage 6 and using the command:

```
register node --id=privateclubID441538964employeesinfo
--user=ops.review_4415
```

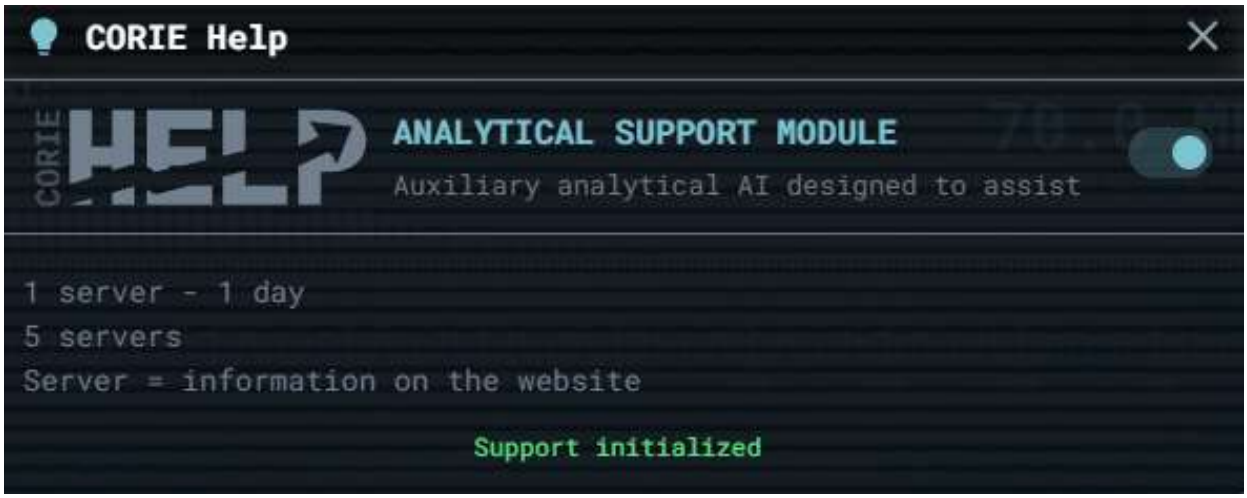

you will see a success message letting you know that the archive has been updated along with Base64 encoded text `Z3JhbnQgcm9sZSA=` translating to “grant role”

The ‘employeesinfo’ report in the archive on https://private-club.pmc.corie will then be available for viewing.

BASED ON THE HINT OF 1 SERVER - 1 DAY INFORMATION WILL BE SPLIT UP BASED ON WHICH DAY THEY WERE FOUND BELOW

(Based on the daily timer reset)

Signals (Day 1 - March 6th / March 11th)

(based on the stuff we did in Stage 6)

Data for each day:

gsh:whyjrjkbsj
fdvhnvdxnlg
gewioweynmg
lDBiGTPS
lDSadbFS
lDINdReS
ewuigthrwesfd
ntypadkrshmvj
wdplksaqrtmhy
gnizkhMILDYPRKAX7915
UULUU
NULNN
zxpqrjhopadqd
lDIDARQQ
lDQaRdiQ
UULLL
ULUUN

Group 1 Hint solving:

Group 1 — double encryption in each case + triple encryption. The key is in the radio

---

Assumed data:

gsh:whyjrjkbsj
fdvhnvdxnlg
gewioweynmg

---

gsh:whyjrjkbsj

Found on frequency 72 Mhz

- Substituting 7 and 2 Using A=0, B=1, C=2…. Z=25, we get “HC”
- Using “HC” as the key to vigenere “gsh:whyjrjkbsj” gives “zqa:uawcpciuqc”
- Vigenering again with the key “PMC” gives “key:foundation”

vjc:duhawmfhqt

Found on frequency 116 MHz

- Substituting 1 1 6 Using A=0, B=1, C=2…. Z=25, we get “BBG”
- Using “BBG” as the key to vigenere “vjc:duhawmfhqt” gives “uiw:ctbzvgegks”
- Vigenering again with the key “KEYCONFIDENCE” gives “key:afoundatio”

aynkqfniwig

Found on frequency 137 MHz
- Substituting 1 3 7 Using A=0, B=1, C=2…. Z=25, we get “BDH”
- Using “BDH” as the key to vigenere “aynkqfniwig” gives zvgjnymfphd
- Vigenering again with the key “KEYONFIDENC” gives “privateclub”

Group 2 Hint solving:

*Group 2 — 3-step encryption. Result: ID*********. *=number*

Assumed Data:
IDBiGTPS
IDSadbFS
IDINdReS
IDIDARQQ
IDQaRdiQ

IDIDARQQ

`Decoding IDARQQ from base64 to hex, we get 20 30 11 41`
`20301141`

Group 3 Hint solving:

Group 3 — 1-step encryption

Assumed Data:
ewuigthrwesfd
ntypadkrshmvj
wdplksaqrtmhy
zxpqrjhopadqd

---

zxpqrjhopadqd

zxpqrjhopadqd (shift3 +-++-+-+++-+-) -> customersdata

Group 4 Hint solving:

Group 4 — 5-step encryption. Formula exists. Lowercase = L, Uppercase = U, Digits = N

Assumed Data:
gnizkhMILDYPRKAX7915
UULUU
NULNN
UULLL
ULUUN
---
gnizkhMILDYPRKAX7915 -> gnizkh MILDYPRKAX 7915
gnizkh -> ATBASH -> tmraps
MILDYPRKAX -> ROT13 -> ZVYQLCEXNK

Signals: (Day 2 - March 7th)

eryiprbuysd
aynkqfniwig
gewioweynm
---

gsh:whyjrjkbsj

Found on frequency 72 Mhz
- Substituting 7 and 2 Using A=0, B=1, C=2…. Z=25, we get “HC”
- Using “HC” as the key to vigenere “gsh:whyjrjkbsj” gives “zqa:uawcpciuqc”
- Vigenering again with the key “PMC” gives “key:foundation”

vjc:duhawmfhqt

Found on frequency 116 MHz
- Substituting 1 1 6 Using A=0, B=1, C=2…. Z=25, we get “BBG”
- Using “BBG” as the key to vigenere “vjc:duhawmfhqt” gives “uiw:ctbzvgegks”
- Vigenering again with the key “KEYCONFIDENCE” gives “key:afoundatio”

aynkqfniwig

Found on frequency 137 MHz
- Substituting 1 3 7 Using A=0, B=1, C=2…. Z=25, we get “BDH”
- Using “BDH” as the key to vigenere “aynkqfniwig” gives zvgjnymfphd
- Vigenering again with the key “KEYONFIDENC” gives “privateclub”

Group 2 Hint solving:

*Group 2 — 3-step encryption. Result: ID*********. *=number*

Assumed Data:
IDHSS7rc
IDHVX8mj
IDTHD6ua
IDGBZ1pq
IDRBU4lk

IDRBU4lk

Treating everything after ID as base64 already and then converting it into its 6-bit values from the base64 table:
010001 000001 010100 111000 100101 100100

Splitting into blocks of 4 (resulting in 9 blocks)
0100 0100 0001 0101 0011 1000 1001 0110 0100

Converting it to HEX
4 4 1 5 3 8 9 6 4 -> 441538964 -> The only one that is just 9 digits

Solving to grant Level 2 access on the PrivateClub website

Run these commands:

```
connect PrivateClubID441538964employeesinfo
--password=PjzU6PIzhiABpRO7GK98
```

and

```
register node --id=PrivateClubID441538964employeesinfo
--user=ops.review_4415
```

Which provides Z3JhbnQgcm9sZSA=

Then these commands:

```
connect PrivateClubID71527152operationsarchive
--password=QmXH5RTkyeCDuLN9Ab58
```

and

```
register node --id=PrivateClubID71527152operationsarchive
--user=ops.review_4415
```

Which provides LS1hdXRoPUNMMi0=

Lastly run these commands:

```
connect PrivateClubID18102000administrativedata --password=RkTQ5PUvxaMBnOH7Gy86
```

and

```
register node --id=PrivateClubID18102000administrativedata
--user=ops.review_4415
```

Which provides N0Y5QS1ERUxUQQ==

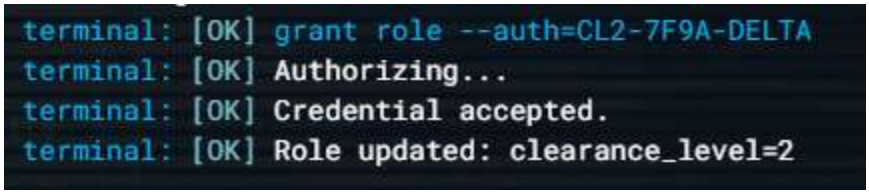

All of the provided info above decodes to the following

1. Z3JhbnQgcm9sZSA = grant role
2. LS1hdXRoPUNMMi0 = --auth=CL2-
3. NOY5QS1ERUxUQQ = =7F9A-DELTA

Skip to here!

Finally use the command:

```
grant role --auth=CL2-7F9A-DELTA
```

This will give you level 2 access on the PrivateClub website,you'll be messaged by “Silver Odyssey”, which contains a new website link, and unlocks 12 more reports. It also gives 2 more fragments on the media reader totalling to 14 unlocked so far…

Next you need to use the commands:

```
connect PrivateClubID20011410customersdata
--password=ZtVY8QLmraCEpXN9Ks57
```

And

```
register node --id=PrivateClubID20011410customersdata
--user=ops.review_4415
```

Which will give you the string
Z3JhbnQgcm9sZSAtLWF1dGg9RlIzLTIxREUtQUxQSEE=
Which decodes from base64 to the command:

```
grant role --auth=FR3-21DE-ALPHA
```

After doing the grant role command, you will unlock level 3 clearance and should be able to see 6 new archives on the Private Club website labeled:
Project Schwarze Sonne 1-6 (Black Sun 1-6)

Finally you need to use the command

```
connect PrivateClubID31408566ghostsites
--password=TQJ9MLxruHPaKV5Zcb89
```

And

```
register node --id=PrivateClubID31408566ghostsites
--user=ops.review_4415
```

This gives you access to the “Ghost site” on the Private Club website.

Read the site fully. This will update the diary and you can message “Unknown” once again.
Upon messaging unknown - you are given a command ->

```
connect moon_orbital_recon --password=Gsdfg53254Hsdfg

OSN-LUNA17_SCAN_ARCHIVE.log
```

This opens a minigame, the answers for this are -

```
answer q1 alex
```

```
answer q2 drop.glass
answer q3 backup.enc
answer q4 7812
```

The diary is updated again with new text. You can then update and inform “Unknown” about your success.

After 6 hours “Unknown” will reach out again. Once you have finished with his dialogue, open your Diary and you should unlock another 2 fragments on the media reader totalling to 16 fragments

James Curtis Fung will reach out to you afterwards, go through his dialogue, as well as being given 1000 credits and 100 rep, pushing you to 8.0 rep.

You will then be on a 3-4h timegate. Once he reaches back out, you will get a personal_log.txt, read it, and an address jj_private. This will be used later on. Reach back out to “Unknown” and continue onto Stage 8.

Stage 8: (17-19) JJ_Private

BACK TO MAIN GUIDE

Stage 8: JJ_Private

29:11 in video - Cor3.gg ARG Walkthrough - Act 2
First solved by dub in discord

After this you will need to contact Unknown (Palimpsest) again.

```
connect ATLAS_INFORMATION GRID_INTERMEDIATE_ARCHIVE_SERVER --password=12345678
```

This minigame is an instance of a puzzle called “King and thousand barrels of wine”/”Poisoned wine bottle” — you have to find one number from the range between 1 and 1000.

Many guides can be found on the internet by googling the name of the puzzle, for example a short summary and guide on https://brainstellar.com/puzzles/easy/31, or a significantly longer explanation on https://medium.com/i-math/a-king-1000-bottles-of-wine-10-prisoners-and-a-drop-of-poison-2dd1959a8dd2.

Alternatively, this variation of the puzzle also allows a very simple bruteforce solution, by allowing you to slowly narrow down the range: Fill out the page with numbers for your first run.

Record the range with Status “ON” in your notes.

Close the minigame, wait out your 60 minute timer, re-open the mini-game and enter into the ten testers (we’re using the 701-800 example here): 701-710, 711-720, 721-730, 731-740, 741-750, 751-760, 761-770, 771-780, 781-790, and 791-800 then run the minigame. The resulting ‘ON’ number series (let’s pick 741-750 as ON) allows you to simply enter the File=741, File=742, … ,File=750 into your terminal to get the final correct number.

In the terminal enter:

```
File=<your_number>
Example: File=375
```

Unknown will message you again, follow through with their dialog and you will receive the ATLAS_ARCHIVE folder and the passhack.exe.
Open passhack.exe and in the Enter Symbols field enter `jj_private` and press Scan, the app

will close and if you re-open it you will see the 4-hour timer counting down for completion.

grv1204JJ

You can contact Vladimir Semakin after initiating the passhack.exe tool.

```
connect jj_private --password=grv1204JJ
```

Upon completion of passhack and connecting to jj_private, opening all 16 files on the directory, and finishing your conversations with Vladimir then Jack, fragments 17-19 unlock. You should also have a new personal_log.txt entry.

The 16 file names, give them a good read:

- INT-JF-01.txt
- INT-JF-12.txt
- INT-JF-26.txt
- INT-JF-43.txt
- INT-JF-54.txt
- INT-JF-66.txt
- INT-JF-67.txt
- incident_report.txt
- archived_graver_forum_thread.txt
- untitled_file_01.txt
- untitled_file_02.txt
- untitled_file_03.txt
- untitled_file_04.txt
- untitled_file_05.txt
- untitled_file_06.txt
- untitled_file_07.txt

You can now leave the ship and move to Act 3. DO NOT LEAVE UNTIL COMPLETION OF STAGE 9

Next Stage 9: Cleaner Bot

BACK TO MAIN GUIDE

Stage 9: 20th Fragment Cleaner Bot / Space Roomba

36:45 in video - Cor3.gg ARG Walkthrough - Act 2
First solved by a bit of everyone tbh in discord

You can now leave the ship and move to Act 3. DO NOT LEAVE UNTIL COMPLETION OF STAGE 9
Stage 9 cannot be completed if you leave the ship.

Use the command

```
connect cleaner_bot_4_2 --password=12345
```

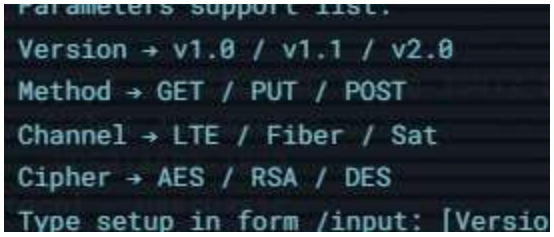

Then

```
cb_system_info
```

You will be told to type

```
/cb_set operating protocol
```

This starts the first minigame where you need to guess the correct permutations of 4 different keys where you're given 3 values for each key. **Please note, the answer is different every time you open the command!**

The response is case sensitive. Some examples using the 3 sets of options;

v1.0 GET LTE AES
v1.1 GET LTE AES
v1.0 PUT LTE AES
v1.0 GET Fiber AES
v1.0 GET LTE RSA

change one item at a time, with three options, you can eliminate a whole row in two commands.

You can also change all of the entries and hope you get a 4/4 mismatch, to eliminate those 4. But that's less consistent.

Run the above list of commands, slowly 1 by one, if the number of mismatches goes DOWN, then keep that new value. If it stays the same, then you know both values tried are wrong, so the third is the answer.

I.e.

v1.0 GET LTE AES - 4 Wrong
v1.1 GET LTE AES - 3 Wrong

(this means v1.1 is correct, keep it!)

v1.0 GET LTE AES - 4 Wrong
v1.1 PUT LTE AES- 4 Wrong

(this means both GET and PUT are wrong. So the 2nd answer is POST.)

Once you have complete the minigame run the command

```
cb_rig_status
```

Then

```
cb_task_list
```

Then

```
/cb_remove tasks
```

Finally, run

```
cb_direct_control
```

- To replay the minigame, just use this command again.

IF you pick the wrong (Green) door 5 times, you get kicked from the bot with a 719 error and a ~~6h~~ 2h cooldown.
If you manually exit with the D Key, or close the window you get a ~~24hr 2hr~~ cooldown, do not do this.

The “barcode” black and white sections are ladders, touching them gives a 707 error and a ~~6h~~ 2h cooldown.

Notes, Theories

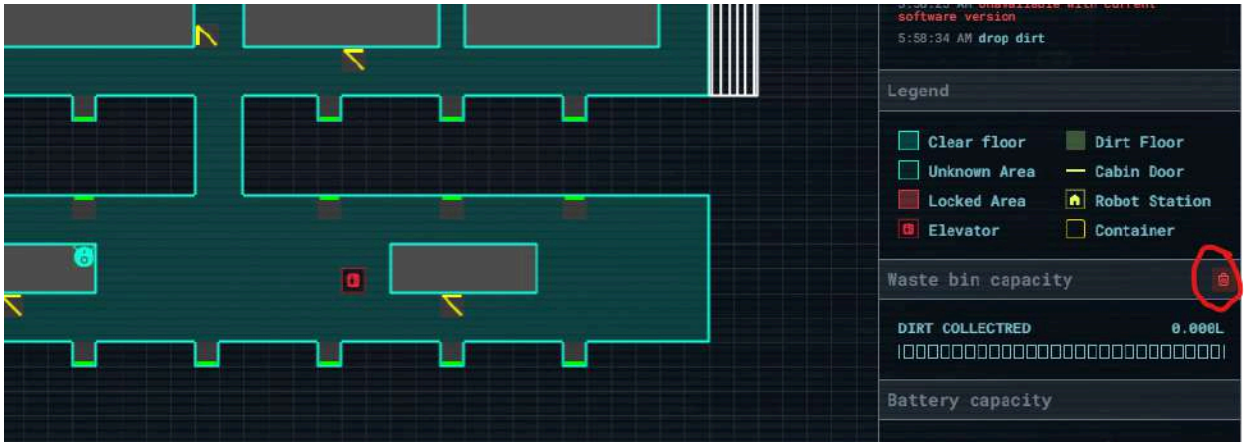

- The green is the unclean area. When you go over it it will turn gray
- Your battery reduces every tile move (but does not go below 17.5%)
- The green lines indicate doors that you can "knock" on.
    - If you pick the wrong (Green) door 5 times, you get kicked from the bot with a 719 error and a 6h cooldown.
- The yellow doors can be opened, and you can go inside the gray floor rooms that look closed off at first, one room has the Air system in it, at random.

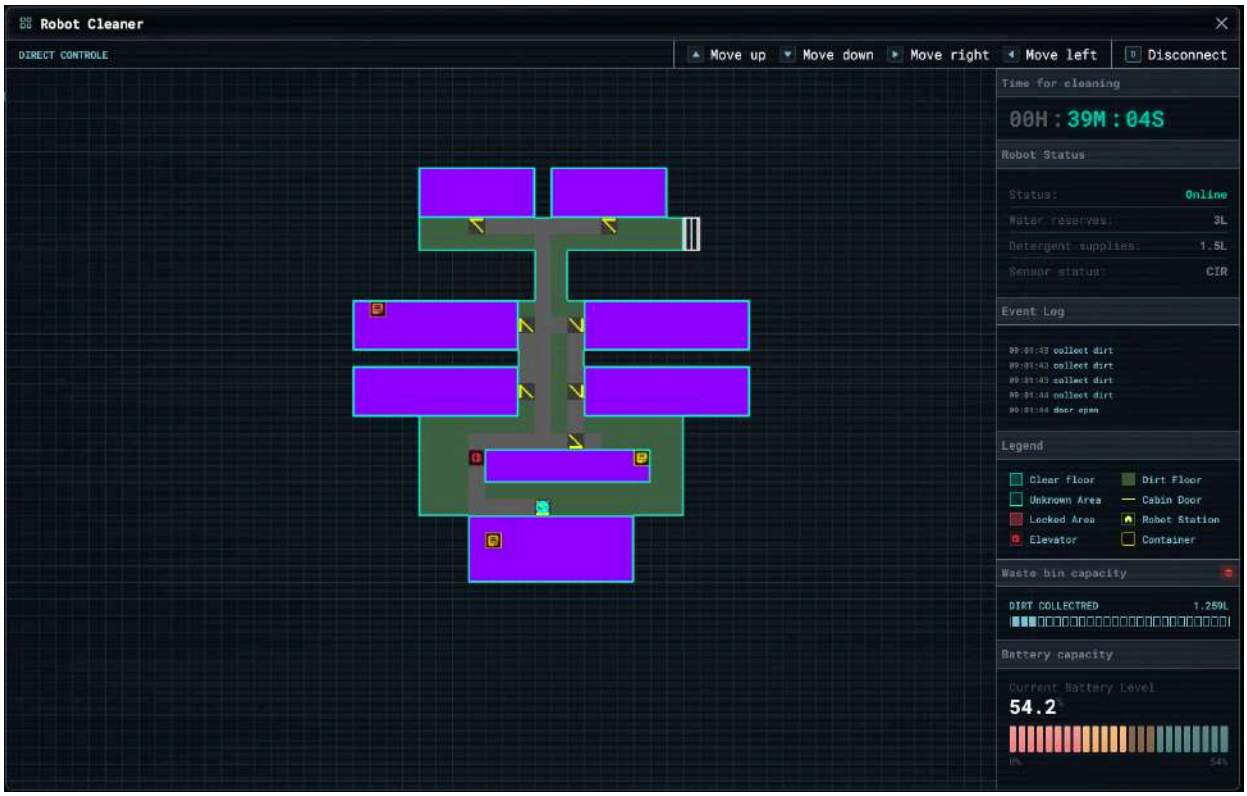

Status (from `mge`)	Triggered by (from code)	What the client does	Is this a win?	Notes
`COMPLETED_NORMAL`	Server decides task is fully done (cleaning finished + time ok)	Auto-closes the minigame window	**Yes** – main win	Standard "you did everything right" ending
`COMPLETED_DOCUMENTS`	Collecting all 3 diaries (`ITEM_DIARY_1/2/3`) + possibly other requirements	Shows special `Sxe` screen	**Yes** – task win	Diary collection is a clear side objective
`COMPLETED_DELIVERY`	Successfully unloading / delivering container(s)	Shows special `Sxe` screen	**Yes** – task win	Logistic mode (`robotType === '1'`) focused
`COMPLETED_AIR_EMERGENCY`	Using `AIR_EMERGENCY` action (button in UI)	Handled but no explicit screen in the snippet	Escape / special	Probably triggered during a crisis
`COMPLETED_LADDER`	Reaching and using a `LADDER` cell	Shows "ladder-707" screen	Escape	Emergency exit, not a full win
`COMPLETED_DISCONNECT`	Manual disconnect or timeout	Shows "knock-719" screen	**No** – failure	Quit / connection lost

~~Current theory based on the hint is to collect all dirt (do NOT knock on ANY doors) and while doing so open any tech doors (the yellow ones) along the route to identify where your air system spawns. Once you have collected all dust, return to the air system, place the robot on top of the system, then press the red trashcan icon to 'drop dirt' into the air system, hopefully triggering the Air Emergency. We are unsure if we should go off the stairs for a 6 hour timer or return to dock for a 24 hour timer once dirt has been dropped.~~

Current theory is now; collect dirt, dump on air system and disconnect in one way or another, wait for silver odyssey to say air system is fixed, get to tech deck in elevator, find the documents, return them to your room, youll get DCed for doing this, so itll take 3 days.

Solution

Each location for the air system, your own door, diaries etc are all unique to the player, but they are static.
so, if you find the air vent at place A, it will always be at place A.

There are system lockouts for knocking on doors. There is a timeout after the first knock, so move fast after you knock one door. You can get 6 or 7 at max speed before being forced out.
Stepping on the tiles that are striped (black/white) are ladders and will trigger a lockout.
Disconnecting triggers a lockout.
Going back to the original start and finishing triggers a lockout.

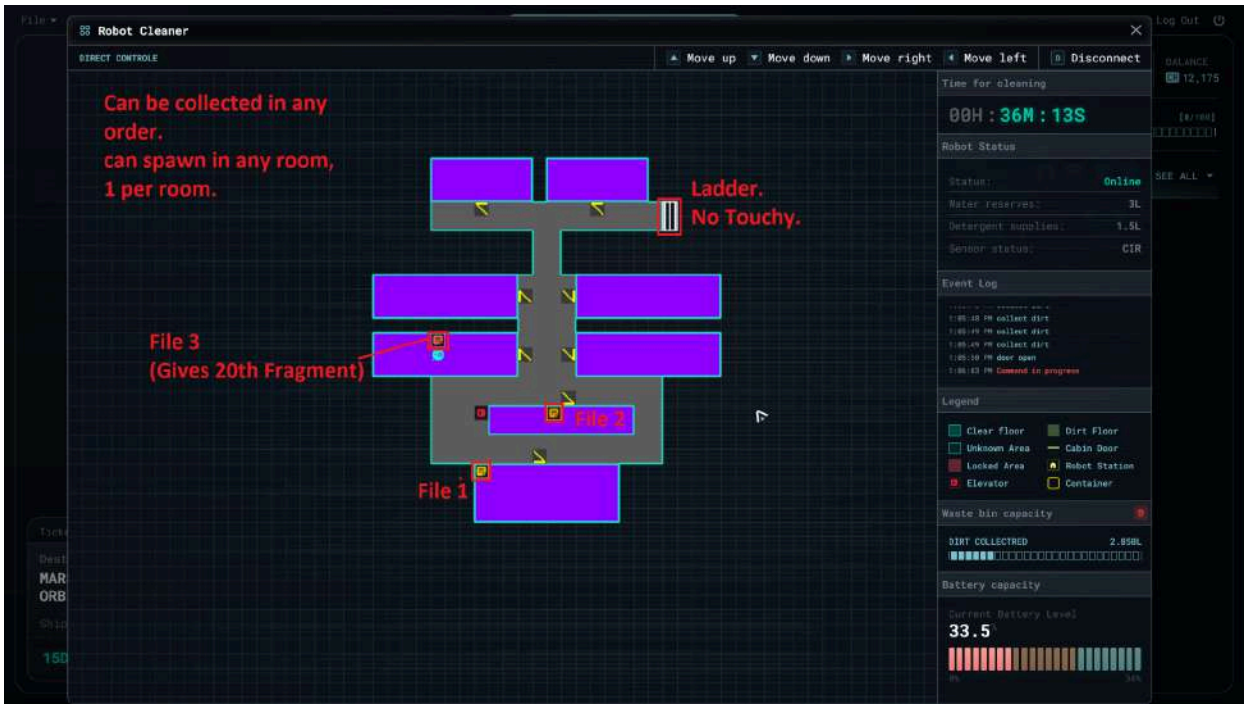

1 - Clean the entire floor and then dump the dirt on the air system block by placing the roomba on the air system and using your mouse to click the trash can icon on the right of the GUI next to ‘Waste bin capacity’ (if you need a visual reference open the ‘Notes, Theories’ section above), then go to the elevator and attempt to move to a different floor. It will say “wait 24 more hours”.
2 - Knock on doors until you get the notification that someone knocked on your door, and note the location. (you will need to know this for later steps)
3 - Wait for the Silver Odyssey Ship Channel to message, to allow you onto the tech floor: (message shown below)((will also give “My name is roomba” achievement))

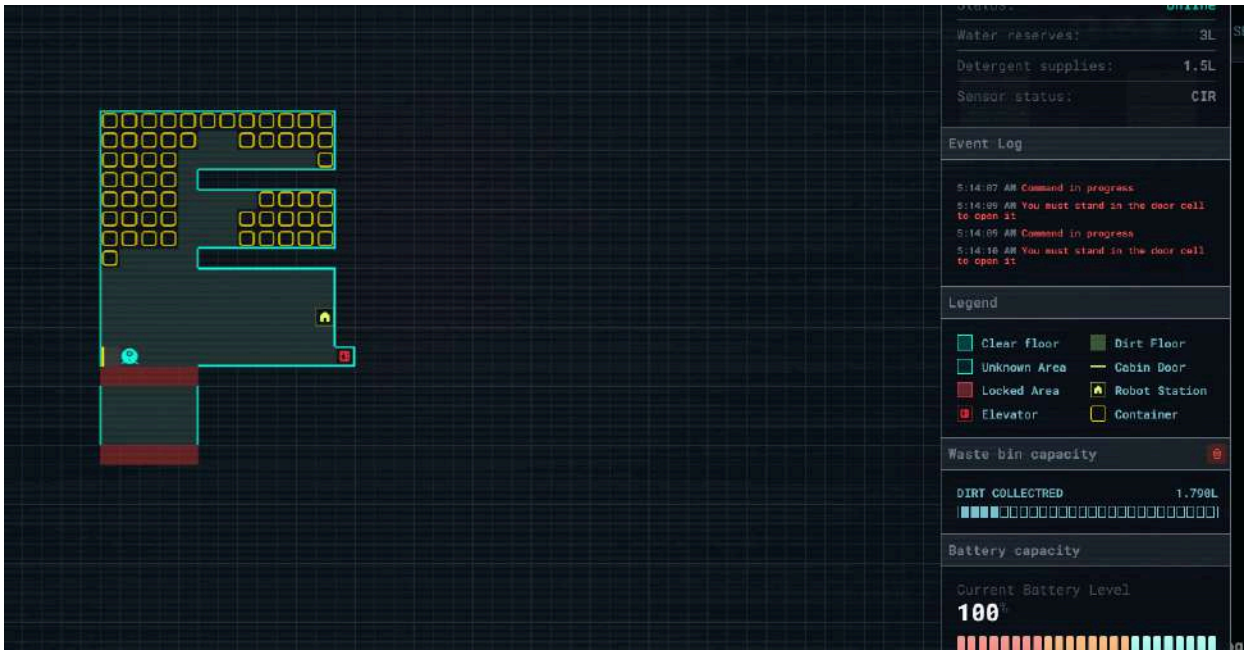

4 - Move to the tech floor and collect 1/2/3 diaries and return them to your door. You can only carry one diary at a time. Handing over a diary triggers a 24h lock until you can use the roomba again.
EDIT 04/06/26 - Handing over a diary only triggers a 2h lock now, reduced from the previous 24h.

5 - The red diary (3) gives an exe file that when run, unlocks disk fragment 20. Completing the data recovery!

YOU MUST READ/ACCESS ALL 3 ITEMS TO PROGRESS.

On 2nd of April the site was updated, adding a third floor which contains cargo. The cleaner bot can only access one layer of boxes, so we need something to move them. One of the diaries

suggests a fetcher bot for cargo, be sure to have read it otherwise you cannot proceed. *(IF you can't access the cargo area or use the command below, open the 3 files again and try again)*

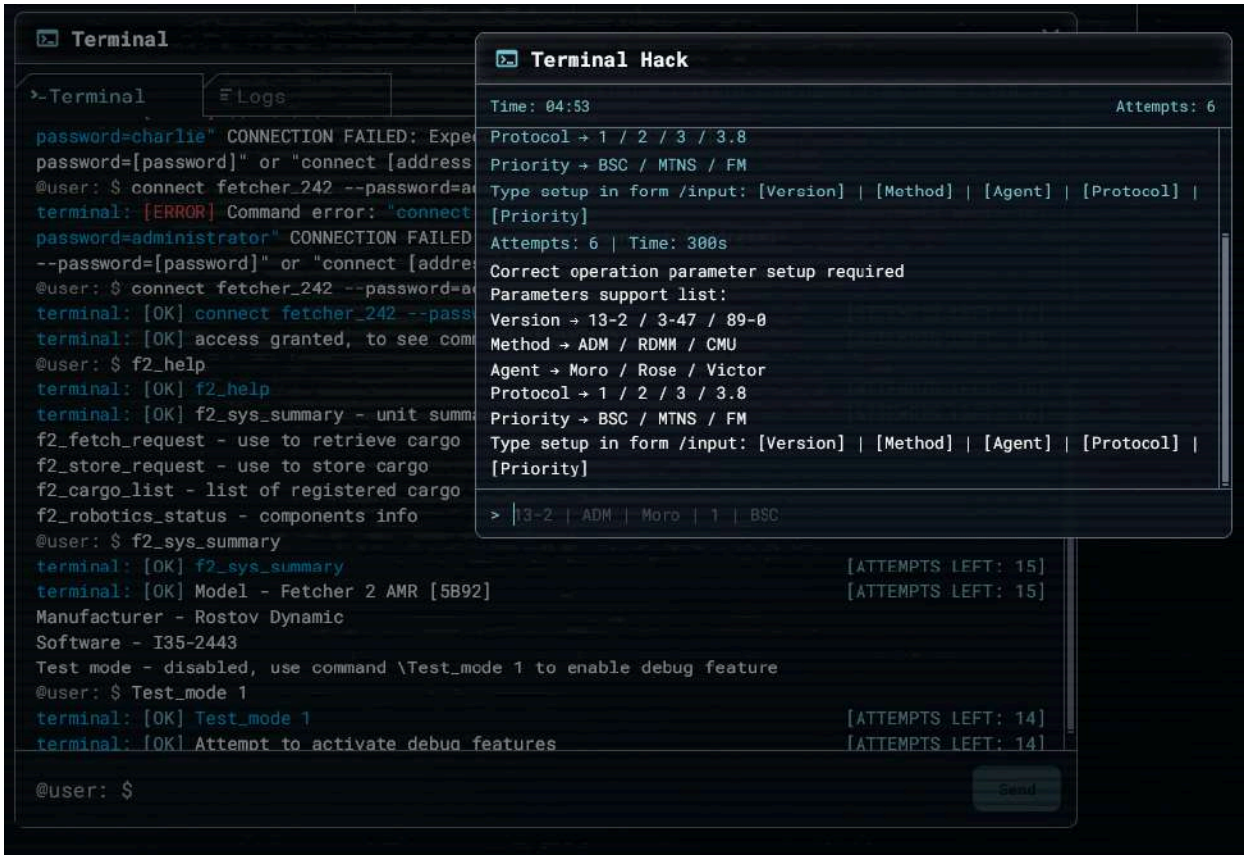

```
connect fetcher_242 --password=admin
```

Then by looking at f2_sys_summary we can see to run

```
Test_mode 1
```

This gives the same mix and match minigame as before, but more complex. Again, the correct answer is different each run.

UPDATE: THE BELOW HACK PUZZLE IS NOW THE SAME AS THE PREVIOUS STEP. (MADE EASIER)

E.g.
13-2 ADM Moro 1 BSC
3-47 ADM Moro 1 BSC
13-2 RDMM Moro 1 BSC
13-2 ADM Rose 1 BSC
13-2 ADM Moro 2 BSC

13-2 ADM Moro 1 MTNS

There is a 20 min timer on failure.
There are two approaches to the puzzle, change one item at a time, with three options, you can eliminate a whole row in two commands, making it end as a 50:50 with the 4th protocol.

You can also change all of the entries and hope you get a 5/5 mismatch, to eliminate those 5. But that's less consistent.

Run the above list of commands, slowly 1 by one, if the number of mismatches goes DOWN, then keep that new value. If it stays the same, then you know both values tried are wrong, so the third is the answer.

I.e.

13-2 ADM Moro 1 BSC - 5 Wrong
3-47 ADM Moro 1 BSC - 4 Wrong

(this means 3-47 is correct, keep it!)

3-47 ADM Moro 1 BSC - 4 Wrong
3-47 RDMM Moro 1 BSC - 4 Wrong

(this means both ADM and RDMM are wrong. So the 2nd answer is CMU.)

Once successful, enter: **=**

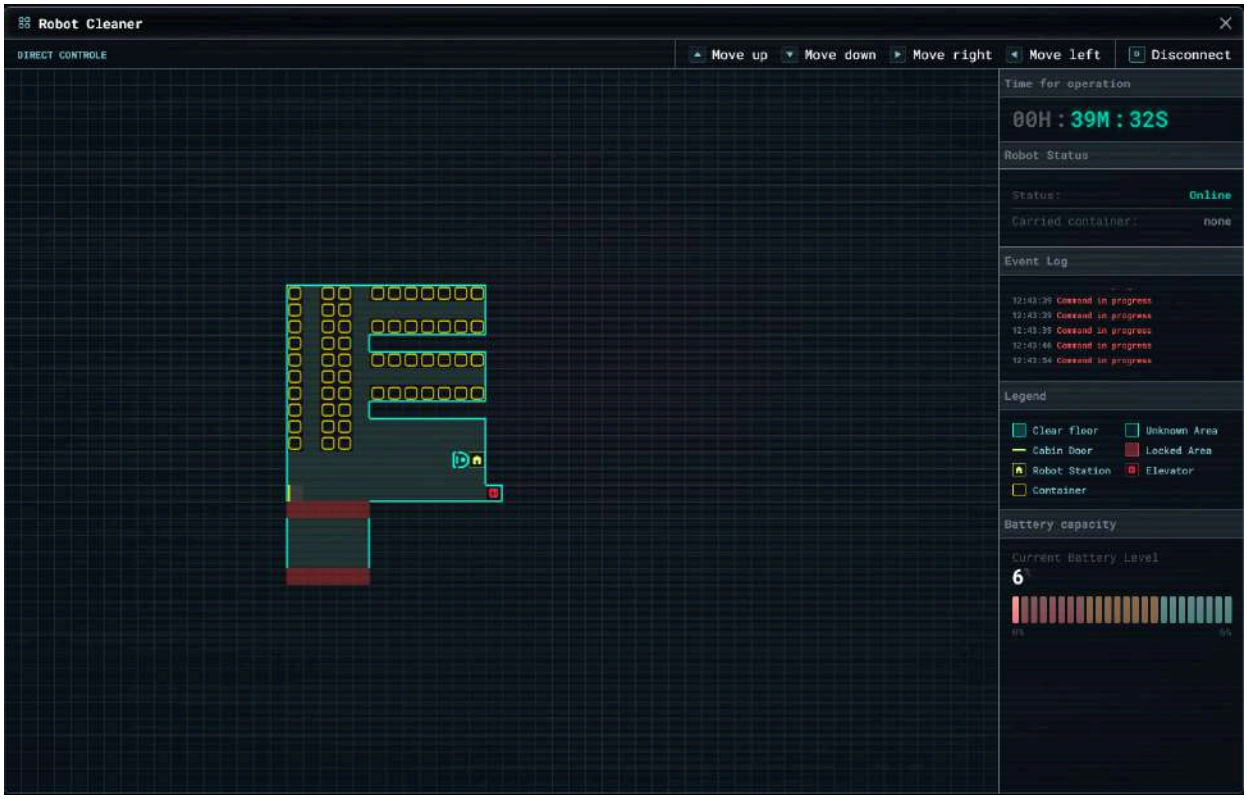

```
f2_manual_test
```

This allows control and movement of the cargobot.
Running out of battery gives a 4hr timeout.
Manually disconnecting gives 4hr timeout.
Finishing at the home tile gives a 10hr timeout.

Only some actions use battery charge on the Logistics Robot:

- Loading a container
- Moving one tile while carrying a container

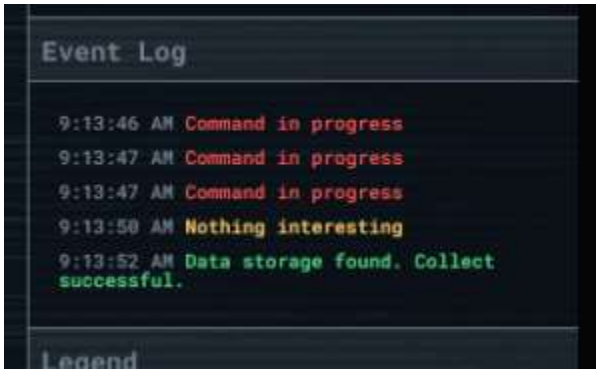

This is the ideal “completed” layout, giving access to every container.

We need to move the containers into a layout so that the cleanerbot can access and search every one.
Use the cleanerbot command to control the bot, elevator to floor 3, then use it to search the containers that you’ve moved.

```
cb_direct_control
```

We are looking for Hacker Data, and when you find it, it will show in the event log:

As we did with the diaries, take the file back to your door. This will give you a new .exe file in the Silver Odyssey folder called “5CRYPt0L (3)” and 800 credits.

Trying to run the .exe file at this point in the progression returns an “ACCESS DENIED” message. It will be useful later in Act 3.

Once you have the 5CRYPt0L (3) and confirm you get an access denied due to software versioning, you can proceed to Act 3 via purchasing a ticket or landing/exiting the ship and following the guide for **Act 3 Repnode M7 here**

Why not hop over to the discord and join in the discussions and help others that are stuck?

BACK TO MAIN GUIDE

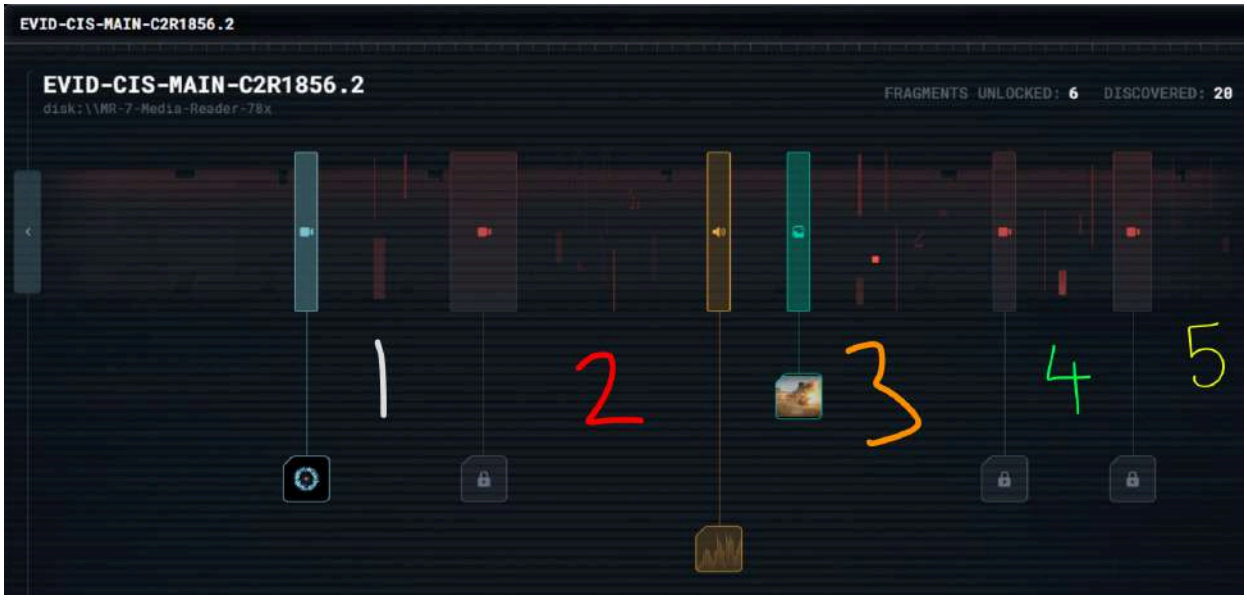

Fragment Timeline

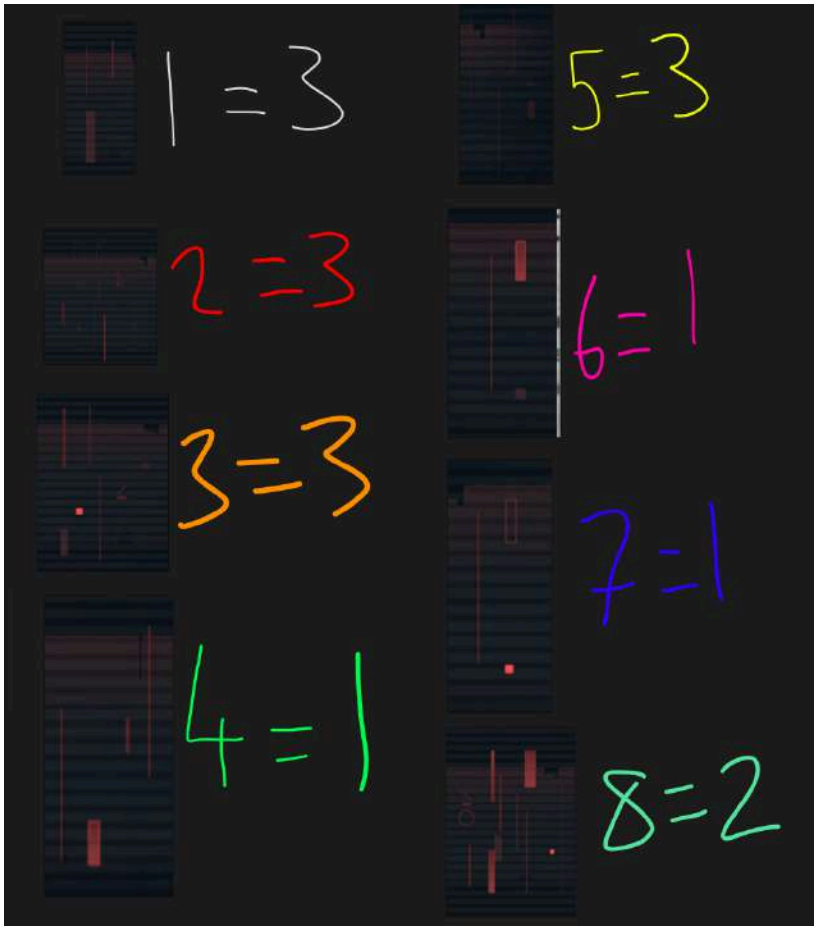

Now we have decrypted/repaired the drive we can now access the file '**EVID-CIS-MAIN-C2R1856.2**', **double-click** it to enter into a timeline with audio clips, video clips and some pictures. These are referred to as "**FRAGMENTS" (Frags**)

There are a total of 20 discovered Fragments, and it appears we may need to progress through and unlock all 20.

Interestingly on the 6th of February, they added new symbols to the timeline. These symbols appear to match symbols in some of the new personnel profiles.

Fragments

1. Video Clip: A9F3C1_0047 **(Unlocked Stage 1)**

2. Video Clip: X17C_92AA **(Unlocked Stage 7)**
3. 2027: Audio Clip: fe_55_gdr **(Unlocked Stage 3)**

20. Image: BLK_0A91C_F **(Unlocked Stage 7)**

The last thing now is to wait for the ship to land.
Don’t forget to do your dailies, apparently we’ll need the cash!

Ship landing eta -

DESTINATION: MARS, REPNODE-M7 ORBITAL STATION.
Arrival time: Sunday, 12 April 2026 17:00 (UTC)

https://everytimezone.com/s/7d046051 - This will show your local time

We are the Core that keeps you in belief. This video on the cor3 channel also goes live at that time.

ACT 3 - Mars, REPNODE M7

Leave the ship, read the diary and message aurana.

You are given two files and a name “Christopher Selm Tong”

Open the files, and click the cito16 link on one. https://cito16-storage.corie
You can message Aurana again after. Opening the Dossier C.S. Tong file will add the text-equivalent of the dossier called “Dossier C.S. Tong - Text” to your codex.

This unlocks the network map tool in your toolbar. And we are told to connect to **RM7-E1L2CT**.

Network map icon: 

Click on this node in the map and “**Connect**”
Aurana now messages to retry the cito16 browser page.

This page has one downloadable file, **KRVA_BB.eb52x**.
Download and open it, it’ll error and you can **message Aurana** about it.Once the conversation is completed, re-open the file to receive the “KRVA_BB Project Files” codex entry.

Back in the NW Map (Network Map) Click “**Home**” then “**Market**”.

Here we can find upgrades to allow us to do more work, along with jobs.
For now, we need to buy “**Cypher+ v1.4**”, as of writing this costs 6400 CR and 1 CRL. This is the only DECRYPT software available to you at the moment. And it also lists its supported extensions, .eb52x and .ab52p.

After purchase, click the loadout button on the toolbar and install **CYPER+**
(Power off at top, install, power on)

Loadout icon: 

Opening the file gives us a hacking minigame. A helpful tool for it can be found on the Tools page.

Open the file after to see the KRVA_BB Drone. Click INFO to see a path.
Visit this in the browser
https://RM7-E1L2CT.local/storage
Then contact Aurana again.

We now go back to the market to buy “**Porter-Lite r4**” for, at the time of writing, 13,225 CR

(Visiting the website in the previous step gave us 14,000 CR.)

To install porter, we either need to buy better hardware, or disable **CYPHER**. Before doing this, in the market, take on the decryption jobs, and complete them. It's the same match game as above, each pays ~800CR.

Then enable Porter, then in the Network Map, click the **E1L2CT** box and login. Porter is an option here.
It's the same match up game again.

On the **FILES** tabs, there are three files to find, and download.

Email: From: Chris_Tong.txt
Component_board 71review.txt
Mantis_drone_r4RD(TONG).png

Open them all and talk to Aurana.

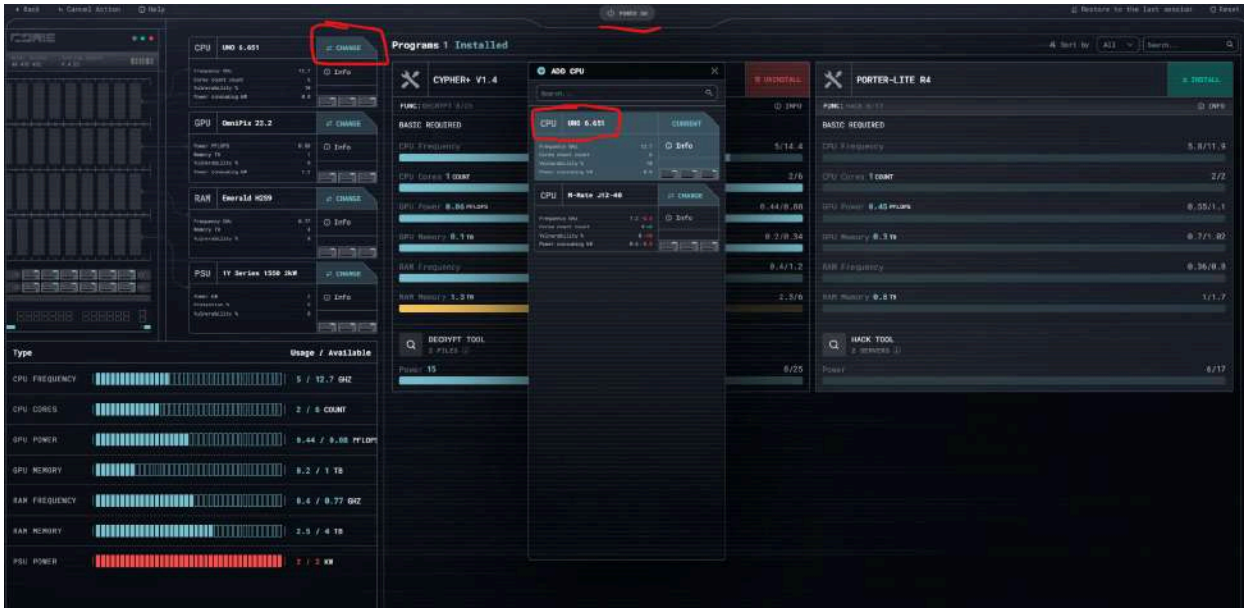

Market > Hire. Your merc will have a random name, He costs 8k. If you can't buy him, refresh. You pay part up front and the rest on completion, don't spend all your money!

In the meantime, clean up any leftover market jobs, and connect to all available servers.

WHEN DOING SERVER JOBS, HAVE THE SERVER UI CLOSED BEFORE ACCEPTING THE JOB.
If you don't, then the required file or IP will not appear in the list.
Leaving the server UI on “Summary” appears to be okay.

To Hack into **RM7 E1SCP**, we need 12 Hack Power, to do this, we need to buy the UNO CPU in the market and equip it.

To Equip the CPU go to **LOADOUT**, **Power OFF**, change CPU to **UNO CPU** you just bought, **Power On**

When the merc returns, you can pay him on the expeditions page, this is 7,200CR. (the remaining part of the 12k).
Open the container and claim the TX Board.
You can discuss with Aurana the results of the expedition.

Following this, you are told to use the market, send out more mercs and do jobs.

It's likely that we will need to earn enough rep and CR to upgrade the machine we are using.

Keep completing jobs, either by finding and deleting files, or adding and removing IPs.
You can hire more mercs after completing the first job, they get more and more expensive slowly, and they have a "type"
This affects how many events occur during their expeditions. If an event occurs, it may have selectable options.
You have 5 mins to make a selection or the merc will auto pick the "safe" option, which may skip out on loot.

There are careful mercs that get about 1 event an hour, and there are fast mercs that get one every few mins.
When an event happens, the site does play a noise. So it's advised to go to the sound settings in the help menu and disable the ambient noise.
Then leave the site open in a tab and listen for the notification to then check back in.

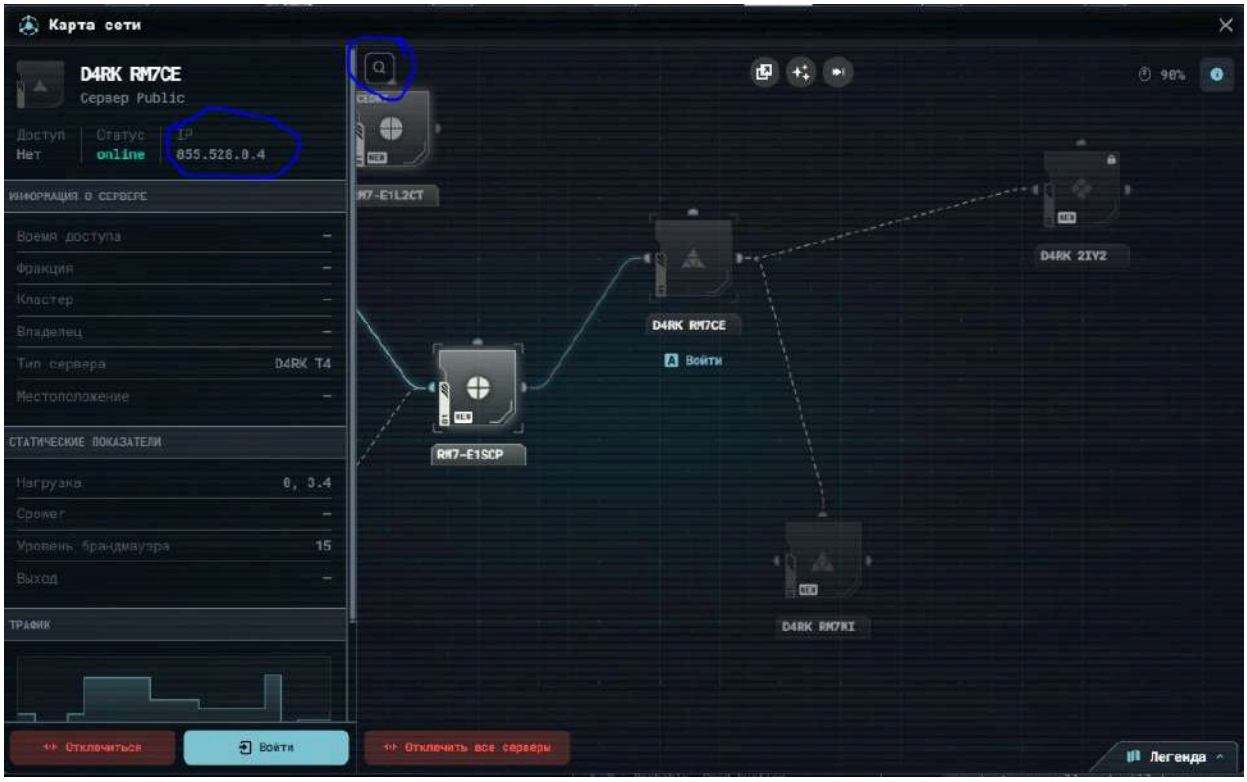

After connecting to **E1SCP**, a new server **RM7 S4L4** shows up on the map.

RM7 E1SCP has a file **sw12_sec_report_2341245.txt** that gets added to the desktop. The text in this file is a hidden IP

855.528.0.4

"And it came to pass in the days of the **eighth** generation, that the elder of the **Fifty and Five** Keys did gather the multitude, making **fifty and two** souls in the Valley of Sorrow for the **eighth** time. Then did the Lord command them silence, saying: Let the **number of the void** stay eternal, for the **Fourth** Seal shall summon the Tide of Change.

Search for this in the Network Map to unlock new nodes

For this to work, **RM7-E1L5** and **RM7-E1SCP** must not be on maintenance.

D4RK RM7MI has a new market of its own, with new gear.
It has its own CRL Rep, and its own (more valuable) jobs!
New CPU, RAM, a new Search and decrypt software are for sale.

NOTE: If you completed Act 2, Stage 9, you can find the file **5CRYPT0L** in the Silver Odyssey

Folder and open it. This gives you the software for free, instead of the market price of 42,250CR

As yet unconfirmed, but it appears that getting to REP 3 on the **D4RK RM7MI** server allows D4RK servers to be specified in jobs, if these have “Access Grant”, it means we can login to the server.

D4RK RM7CE has no new files. The others may have what we need to progress!

As of 24th April (V1.18.80) Jobs from the market now grant +3 account renown xp, and successful expeditions give +10.

Update V1.18.182 - May 8th.
New servers, new tools, new hardware, game center “app” on the bottom bar.

Game Center contains the daily task, and also a tower defence game.
At this time there is no reason to play this, although it is a fun lil distraction.

D4RK Market got some new goodies and a REP cap change (up to 5?)
At rep 4 there is a new hack tool, **H0pp3r**, which is a combo of Hack, search and decrypt.
It can only hack and search PUBLIC CEDRT servers -

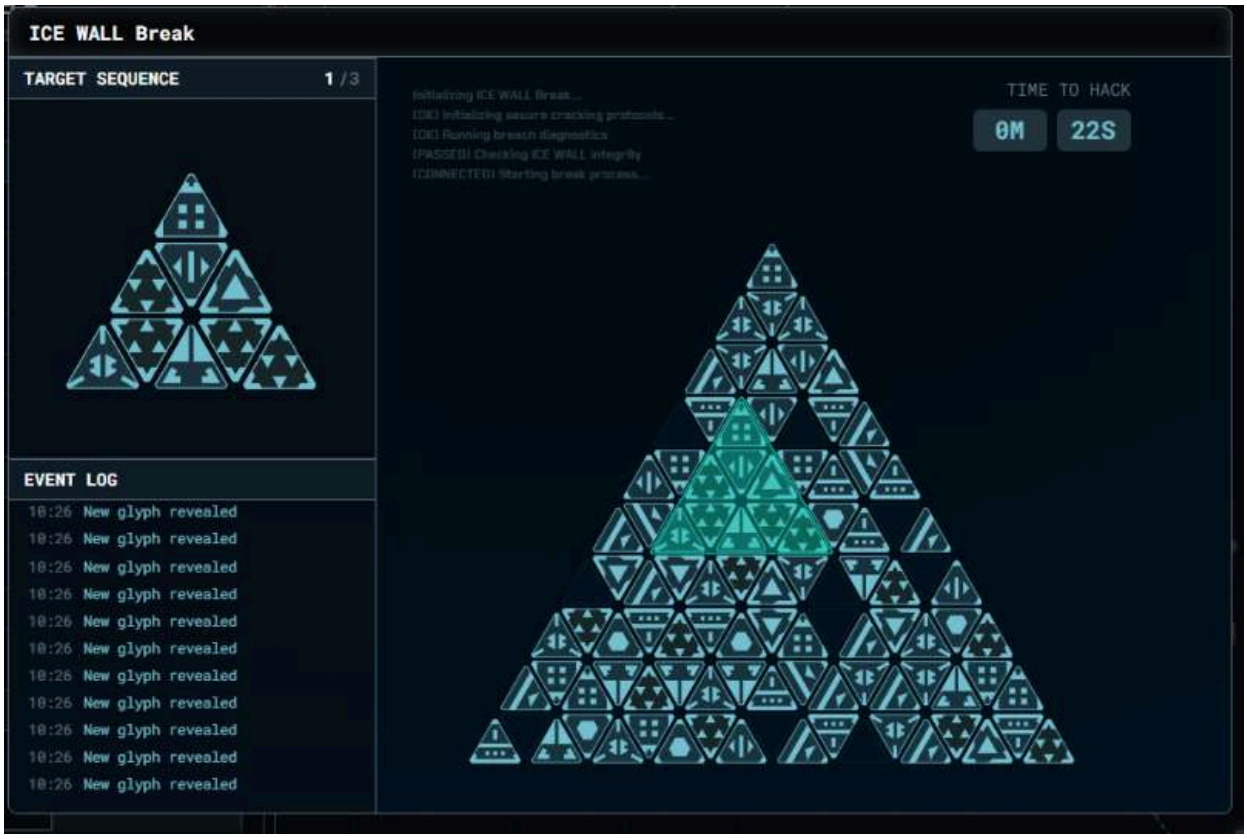

However it does completely replace **CYPHER+**, the starting decryption software, and is more powerful.
5Crypt0l has an extra file type compared to this
PORTER-LITE can access CEDRT Private.

It's not a replacement for all software, but a jack of all trades at this time.

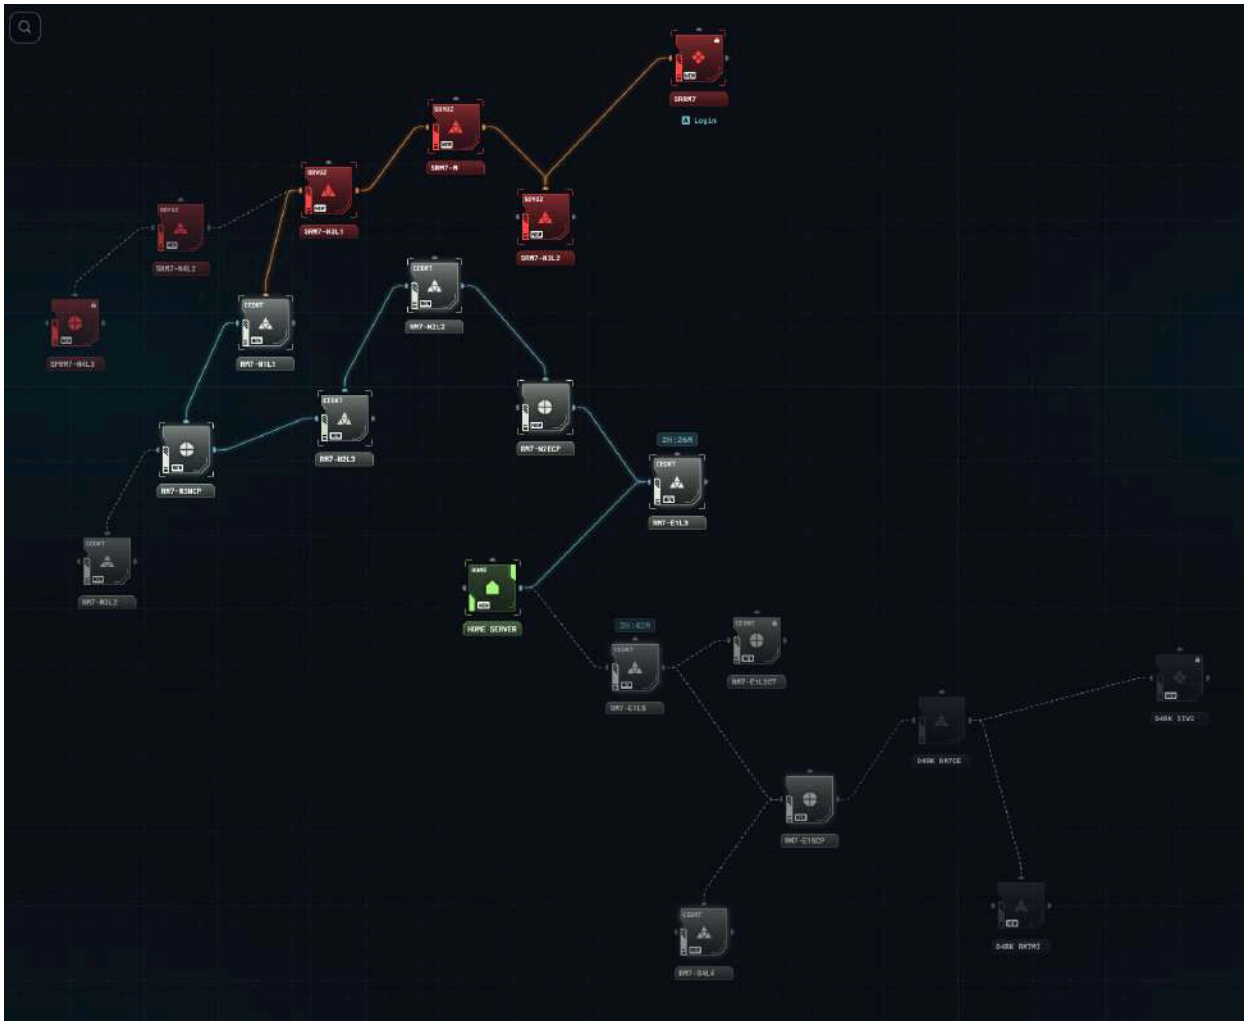

Upon reaching REP 4 on D4RK, new hardware is available to see, a new PSU and GPU, but these require REP 5 to buy.

On the server map a new server appears, **RM7-N2ECP**. You can hack this with a new minigame, the “ICE WALL BREAK” or Pyramid.

You need to find the pattern on the top left within the right hand larger image. The right image will slowly show more and more glyphs until it's full. But you must complete 3 rounds to access the server. Choosing an incorrect placement will cost you a 20 second penalty.

Connect and hack your way all the way through to find all of the Soyuz servers.

Server **RM7-W3L2** is currently permanently in maintenance.
SRM7-M has a new market!

It has jobs, and new hardware + software.

The SW available is to hack and search SOYUZ Public servers.
The PSU is better than other options currently.

Current thought is to hit Soyuz rep 2 and start hacking those servers to see new files.

Two extra hidden connections can be revealed which helps in case maintenance happens on the route.
The hidden connection between **RM7-N1L1** and **RM7-N2ECP** can be revealed by searching the IP address of either of the servers: `855.529.4.1` or `855.529.4.13`. The hidden connection

between **SRM7-N3L2** and **RM7-N2L2** is revealed in the same fashion, by searching either `855.529.4.17` or `855.529.4.2`.

>> Update 3.41.0 has unlocked new content on the 22nd of May

First talk to Aurana to kick things off. (this seems a little bugged!) When you finish talking with Aurana, message the CEDRT Work Chat (where Chris Tong is) and progress the dialogue until he gives you the task of checking out a server with a provided IP of `855.529.2.2` Put that in the search field in the Network Map.

Connect to the new server **EM[RM7-E2L2]** (using the top option from the possible "Task Access" options), logging into the server grants the achievement "Compromised Server". Download and decrypt the file `connections_log_recovered.log` and read the IP `855.529.4.22` from it.

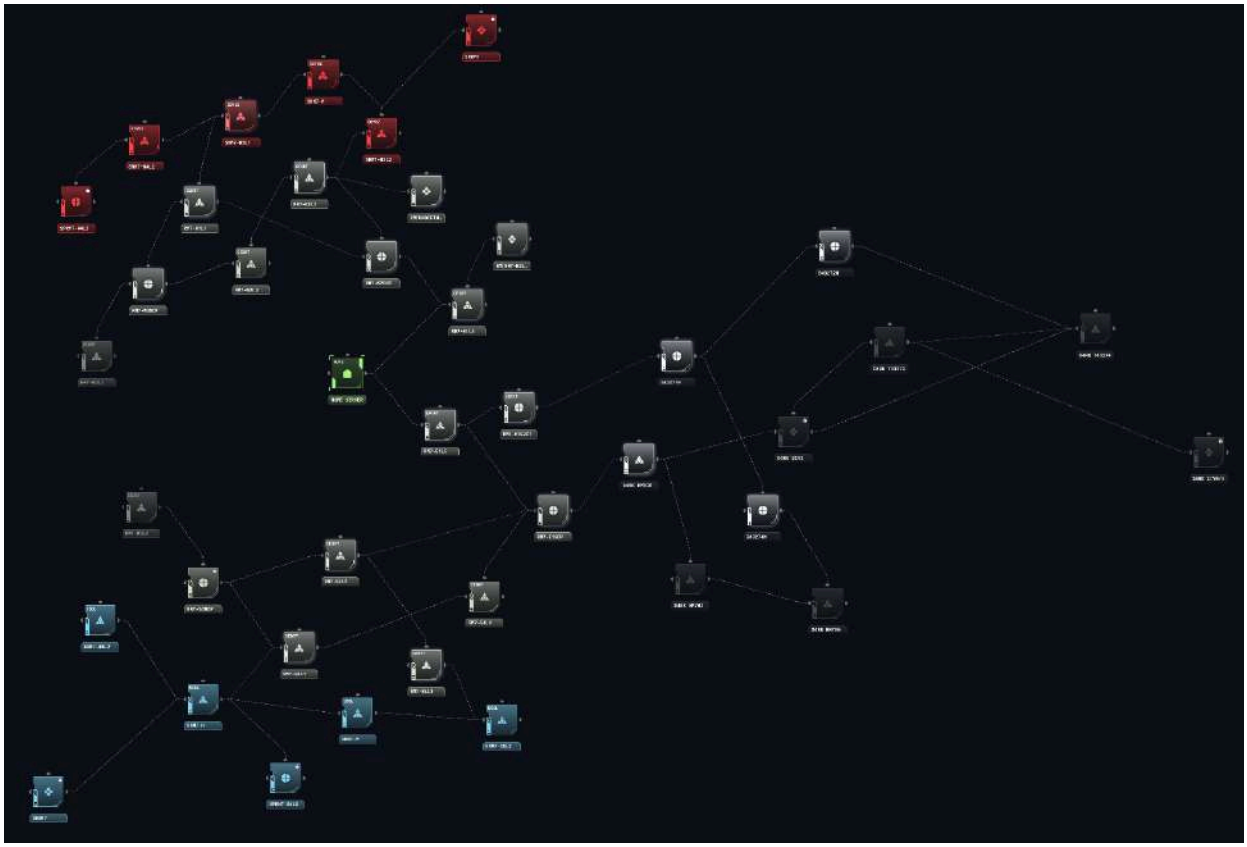

Put that IP into the Network map search again then connect to the server, the unknown user will contact you and another server appears, **EM[UNDEFINED]**. To hack that server, you will need the tool "RE-nova v3.0" from the home market. After hacking in, you can download the files `attack_logs.log` and `ad_note.png`.
Alternatively you can purchase the "firewall" named Nutcracker from the Home market and give it to the unknown user to gain Task Access to the **EM[UNDEFINED]** server, which will then also let you acquire the `attack_logs.log` and `ad_note.png` files. Once you provide the file in a dialogue to Chris in the CEDRT Work Chat, finish the dialogue and then report back to Aurana. These steps can currently bug out, repeat the entire process including searching for the IPs and ensure you use any Task/SAI Access buttons when logging into the servers that show as "NEW".

More servers can be unlocked on the side of **RM7-S4L4** by hacking through them.

Connecting to **D4RK RM7MI** and other **D4RK** servers will unlock new servers in that direction.

More hidden connections can be revealed for redundant paths by searching the following IPs the same way as before. They will only be accessible if you have access to the servers they are connecting to, so unlock the map first.

- `855.529.2.1`
- `855.529.1.2`
- `855.529.1.13`
- `853.172.2.2`
- `854.266.7.1` (you must search this IP to unlock it, once you have the north server)

Additional servers can now be unlocked

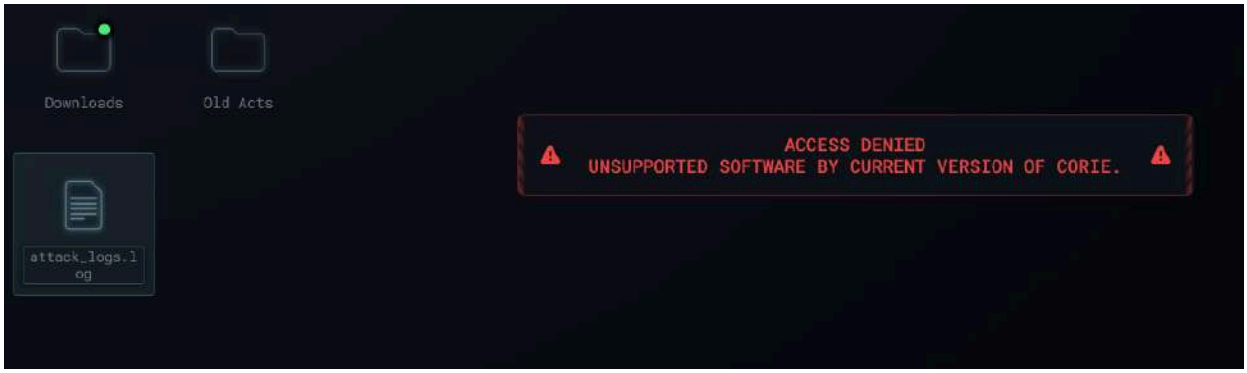

RM7-W3NCP can be hacked to unlock **RM7-W3L2** which when connected, unlocks **RM7-W3L4** and **RM7-W3L3**.
Connecting to **RM7-W3L4** will give access to **RM7-W3L1** which is also connectable via **RM7-W3NCP**

There is a new server **RM7-A2ES** with the IP address `855.529.8.2`.

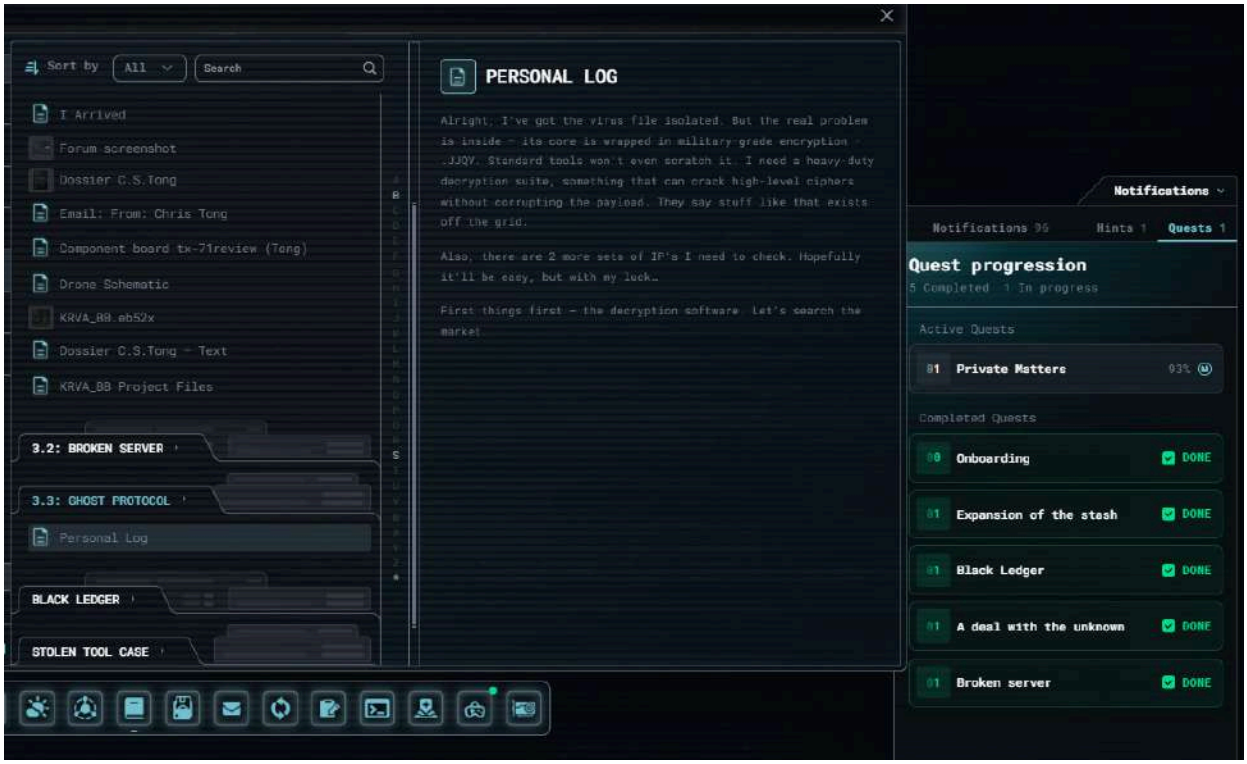

End of Update – 15th June

Ghost Protocol

June 26th '**5cryp0l 0J**' software was added to the D4RK Market for purchase. However, we still receive an error when trying to decrypt the **attack_logs.log** file with the software equipped.

June 29th - Ghost Protocol was removed from the active quest list, but still shows an entry in the Codex.

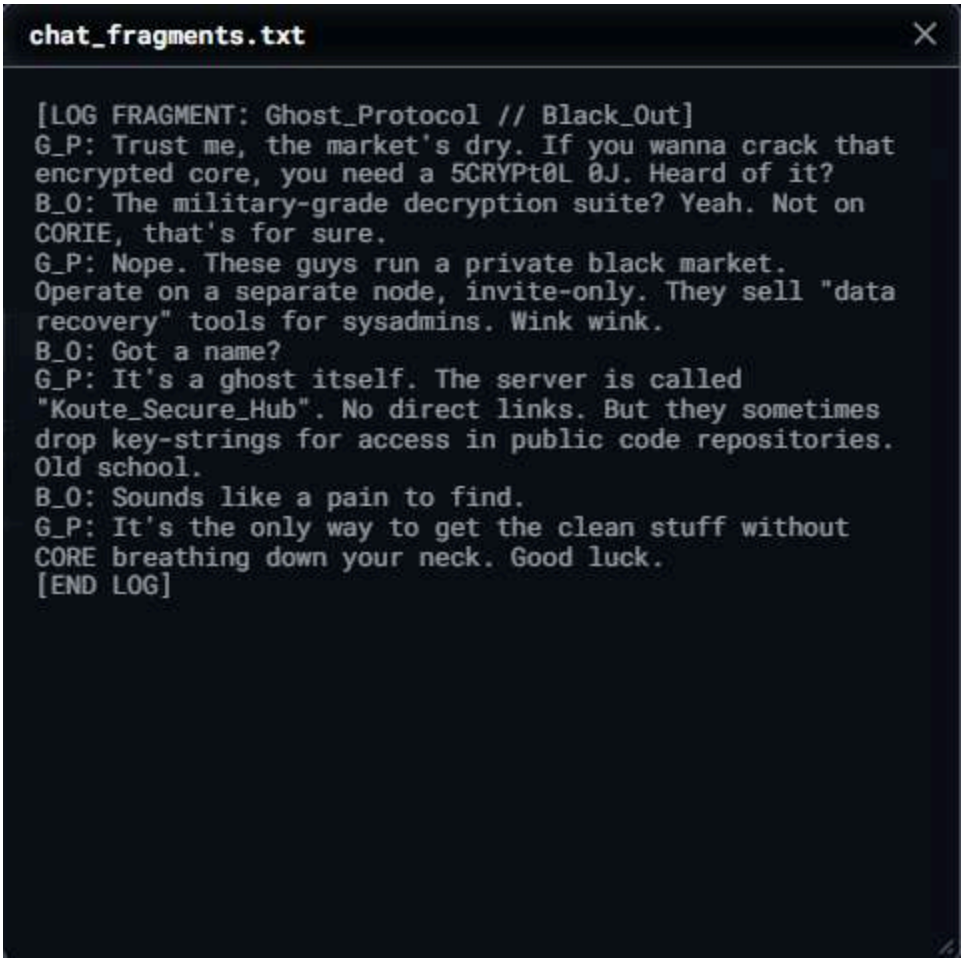

Update July 15th

You are now able to open the **attack_logs.txt** file

attack_logs.txt

The mythical **B43273N** which contains **chat_fragments.txt** is also now available

To connect / find **B43273N**, connect to the **B43274N** server and then search the IP "`854.266.7.3`" and it should appear. NOTE you will need **'D-BADGER V2.2**' software installed in order to progress. This is found on the home server software section and costs 28.8k credits and requires 4.0 REP.

(Thanks to costco_hotdog on discord helping with this info)

Once you've hacked **B43274N** with **D-BADGER V2.2** you can then proceed to **B43273N** to hack it.

Opening the **chat_fragments.txt** file triggers the ability to message Unknown again

Log back in to **B43274N** and download the **blackbox.log** file and decrypt it

blackbox.log

[FLIGHT RECORDER // PARTIAL DUMP] VESSEL: courier-class shuttle (designation redacted) MISSION: cache relocation, payload class A-7.

T-00:42 Departure clearance acknowledged. T-00:11 Pursuit lock detected. Re-routing through debris field. T-00:04 Cargo jettisoned in sector 432-J / drift vector -3.1, +7.4. T-00:00 Recorder dump.

COORDINATES (jettison): 432-J / -3.1 / +7.4 INTEGRITY: 87%

Then speak to Unknown again

You will get a 4~ hour time gate

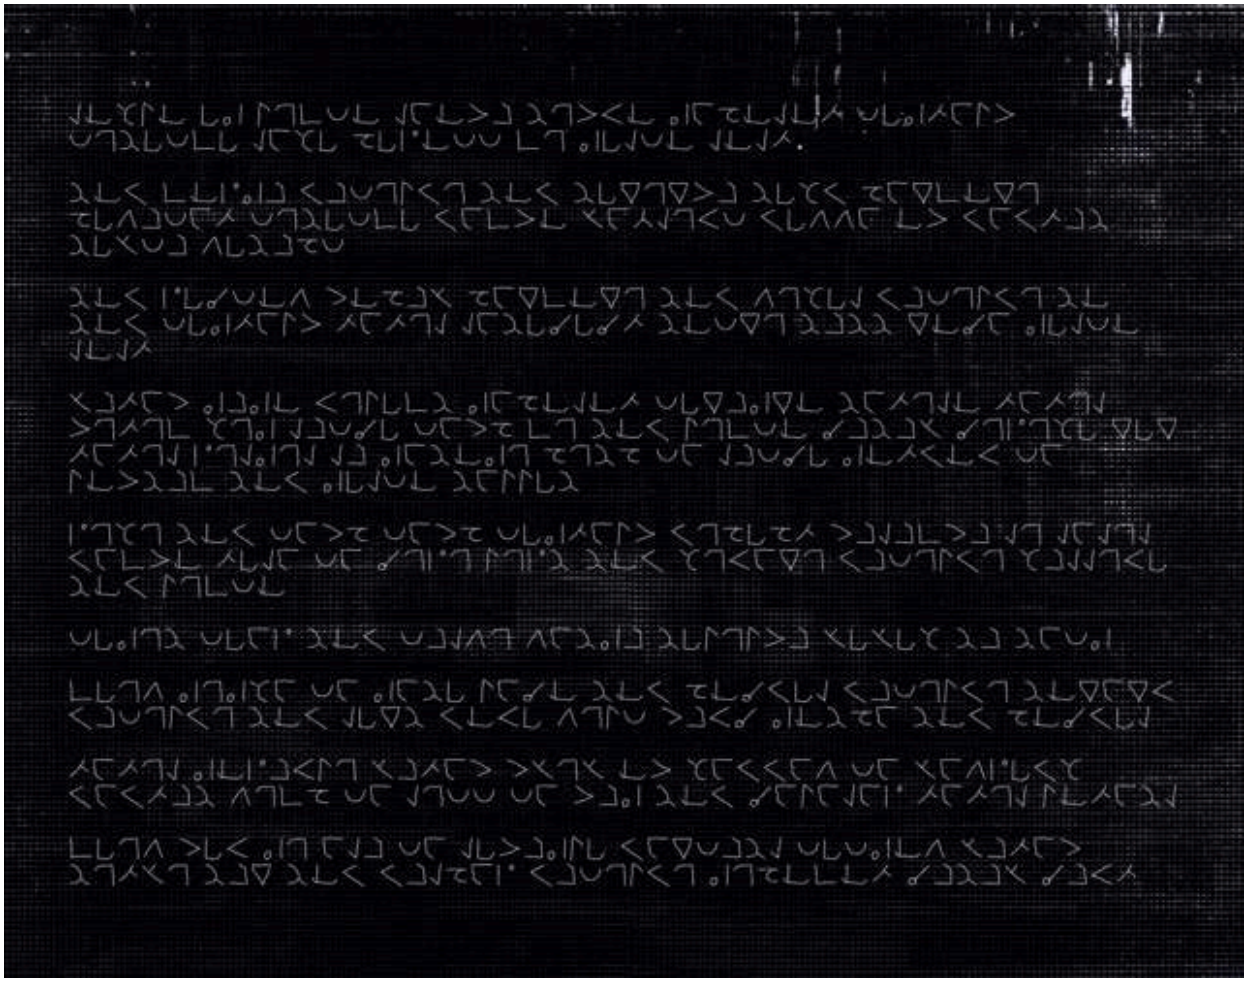

Equip **5CRYPt0L 0J** in your loadout then re-open the **attack_logs.log** file and hack it. Then chat with Chris in the CEDRT work chat and then update Aurana in the messenger as well.Then talk to Chris again directly and not in the CEDRT work chat. This leads you to 3.4 - Wings of Mars (the Drone)

Black Ledger

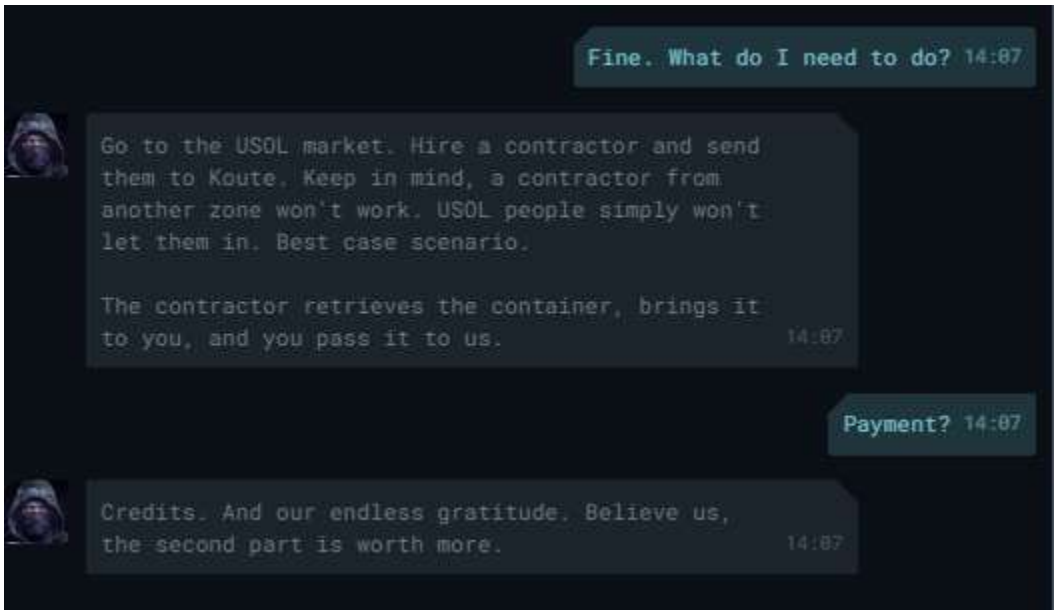

Requirement: 5.0 reliability on the Home Server market.

Connecting to the server **RM7-S4L4** you can now download a new file:
cufgu ab ginhu Koute.png

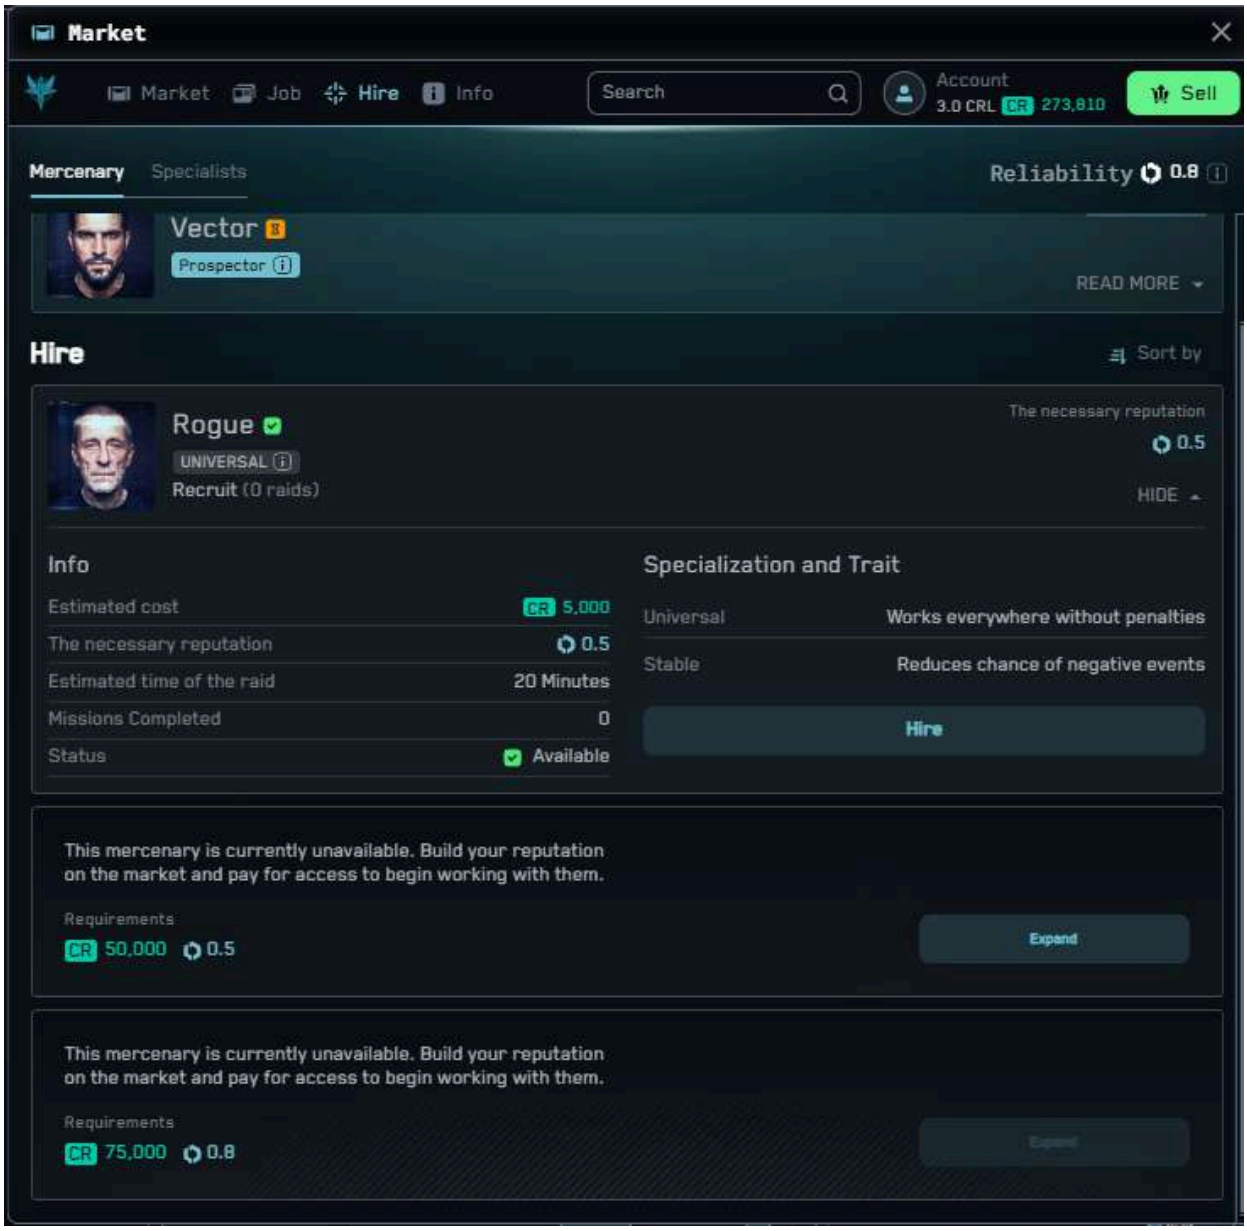

Open the cufgu file, then open your Codex to the Black Ledger entry and open the '**Personal Log - PALIMPSEST cipher**' entry. This will trigger the ability to message Unknown (The Palimpsest group)

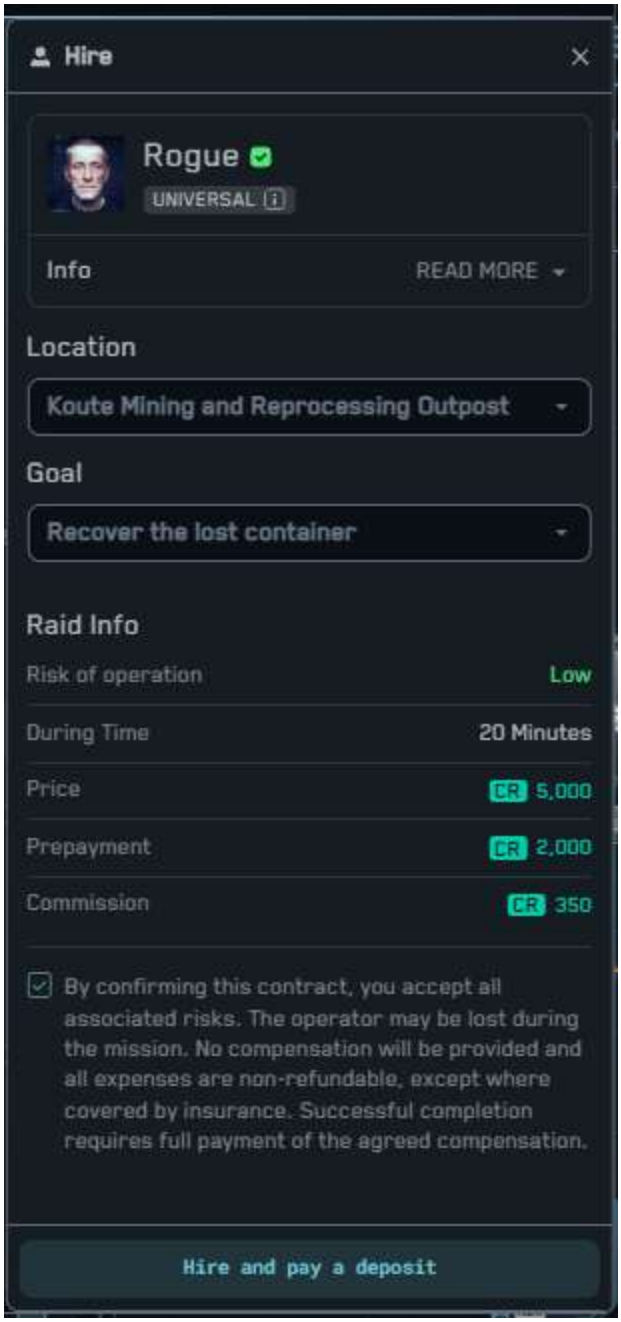

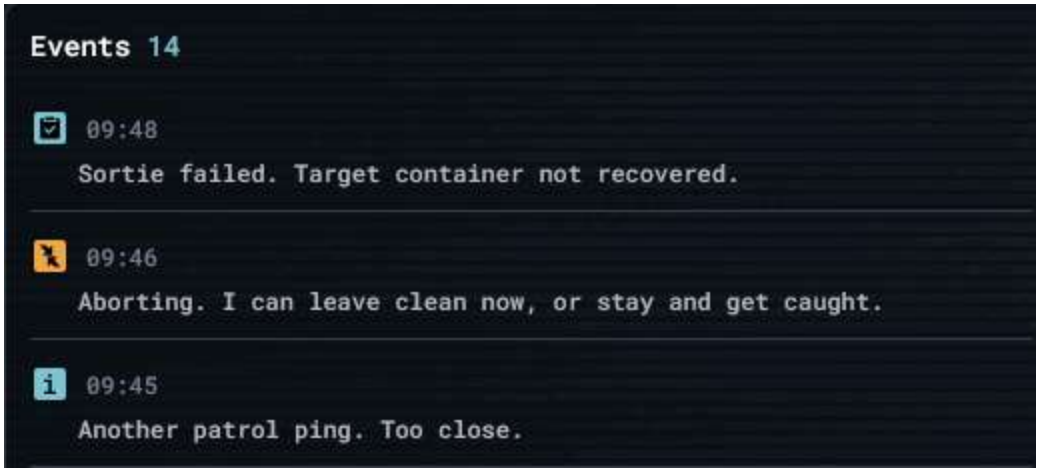

You must now hire a mercenary from the USOL market at **URM7-M** to retrieve the container for Unknown. You have to purchase the first additional mercenary slot to be able to send a mercenary.

- *Note you require to have specialist unlocked from the home market, so you need 5.0 reliability on the home market first before you can hire.*

Almost got caught by a patrol, got lost in the old routes, and then nearly ran into a scavenger. He decided not to risk it any further, so he came back without the container. 10:04
Then you need someone better, not these amateurs. You need someone who knows Koute. Someone who has walked those routes before and came back in one piece.
And where do I find someone like that? 10:04
Usually, the market shows good specialists to people with reputation, history, and enough credits. None of that really applies to you, and we do not have time to wait until it does.
Select answer option
Another way?

Unknown will task you with downloading new files from **URM7-S5L2**, completion of this task will allow you to hire the USOL Elite Mercenary. The new files are '**koute_message_fragment.txt**' and '**MARKET_DIGITAL_SIGNATURES.dat**'

Hire

The mercenary should successfully complete the expedition this time (without any required interacting from you) and you can then turn in the KTE-4417 container to Unknown for a reward.

This interaction will complete the Black Ledger quest.

Logging into the server **URM7-S5L2** even without having the Black Ledger quest started will allow you to download the file **Hochmetall Security - Internal Inspection Order.png**

HDCH

USOL

Hochmetall Security – Internal Inspection Order

Document ID:	KTE-77/2249
Status:	Internal / Restricted Circulation
Issued by:	Hochmetall Security
Subject:	Inspection Authorization – Koute Mining and Reprocessing Outpost
Location:	Koute Mining and Reprocessing Outpost, 16 Psyche
Date:	18.09.2249

By authority of Hochmetall Security, an internal inspection of Koute Mining and Reprocessing Outpost is hereby authorized. The inspection concerns suspected administrative involvement in unauthorized cargo storage, falsified warehouse records, restricted sector access violations, and possible cooperation with 3rd party-linked logistics groups.

Preliminary materials indicate that members of Koute administration may have accepted payment to ignore undeclared cargo movement through decommissioned industrial sectors. The inspection is based on cargo declaration irregularities, discrepancies between container movement logs and warehouse records, unauthorized access events in old cargo lines, reports of unregistered chemical cargo, and possible contact between station personnel and 3rd party logistics operators.

Authorized personnel may inspect, copy, and preserve cargo routing logs, storage access records, contractor profiles, temporary storage declarations, restricted sector incident reports, internal cargo-related correspondence, warehouse shift schedules, and approval chains for archived cargo line access.

The inspection also includes the official station portal: kouteoutpostadministration.corie. The portal database and update history must be checked for deleted warnings, altered safety notices, hidden access records, and references to restricted cargo routes, especially Cargo Line C, temporary industrial storage, legacy sector access, emergency route closures, and external cargo declarations.

The following departments and personnel are subject to review: Logistics Coordination Office, Contractor Relations Desk, Safety Compliance Office, cargo platform supervisors, warehouse route administrators, and personnel approving temporary storage. Any employee found altering cargo records, hiding contractor movement, or approving unauthorized storage access must be suspended from station administrative systems until the inspection is complete.

Koute Station Authority must preserve all relevant records for the period 01.01.2242 – 18.09.2249. Deletion, compression, migration, or scheduled cleanup of administrative, logistics, contractor, and cargo data is prohibited until the inspection is complete. This applies to local backups, public portal databases, Worker Board archives, maintenance logs, and offline storage indexes. Failure to comply will be treated as obstruction of internal proceedings.

The inspection must be conducted without public announcement. Station administration may be notified only after priority records have been remotely copied. If 3rd party cargo activity is confirmed, all materials must be transferred to Hochmetall Security. If direct administrative involvement is confirmed, Koute Station Authority may be placed under temporary external supervision.

Approved by:	Major Cedric Alton, Hochmetall Security
Countersigned by:	Helena Marr, USOL Security

A deal with the unknown

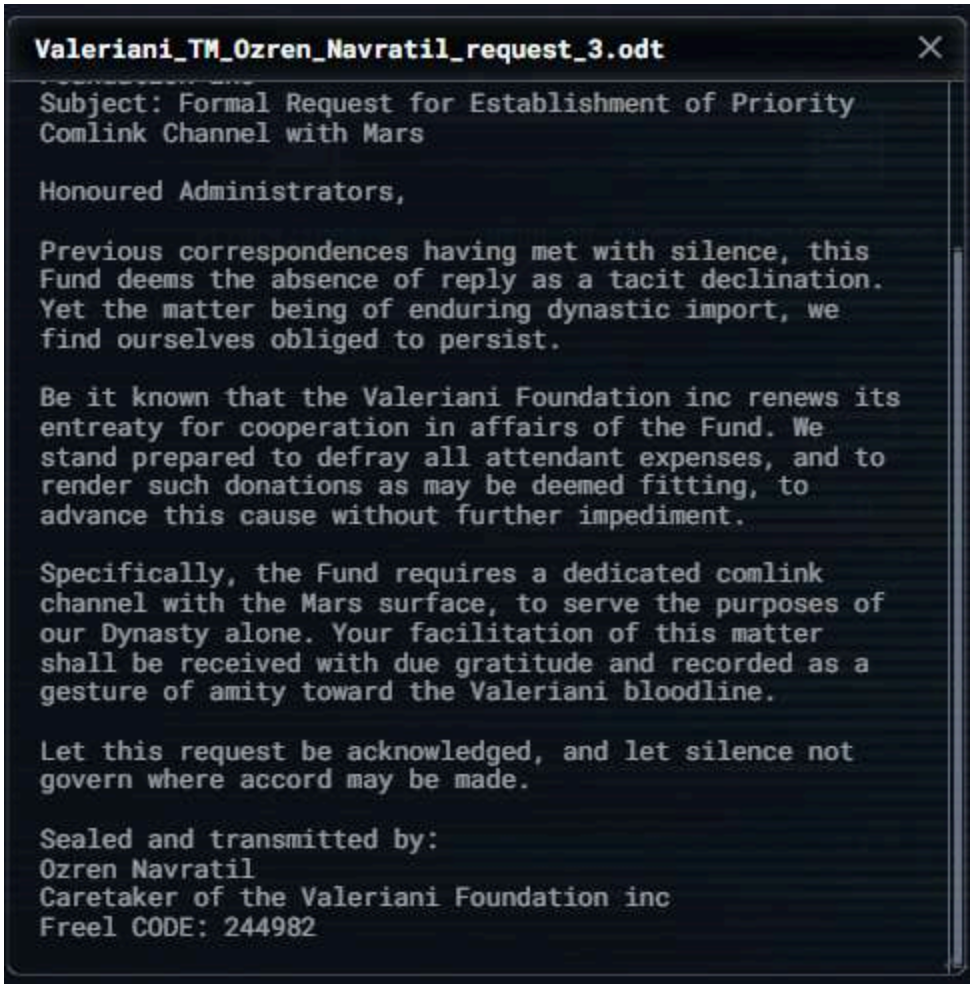

The quest is completed by purchasing the Nutcracker firewall from the Home Market and giving it to the “Unknown User” via the messenger.

Private Matters

Go to **RM7-N2ECP** (located above the Home Server) and download the file "**Valeriani_TM_Ozren_Navratil_request_3.odt**" and open it

At the bottom of the file, there will be a FREEL code, this code is unique to each player account. You can add the person using the messenger.

Talk to Ozren Navratil to progress the quest

Go to **RM7-S4WCP** (bottom left from the Home Server) and download the file "**message_4237122_secured.eb54x**".
Editor's Note: On second playthrough for this step I was able to obtain all 5 needed valuable files for the later step from this same server using the following HW combination with the Screener Pro R10 Software

And by making use of the ‘Search for valuable files’ option in the SAI Files interface.

Once downloaded, open and decrypt it.

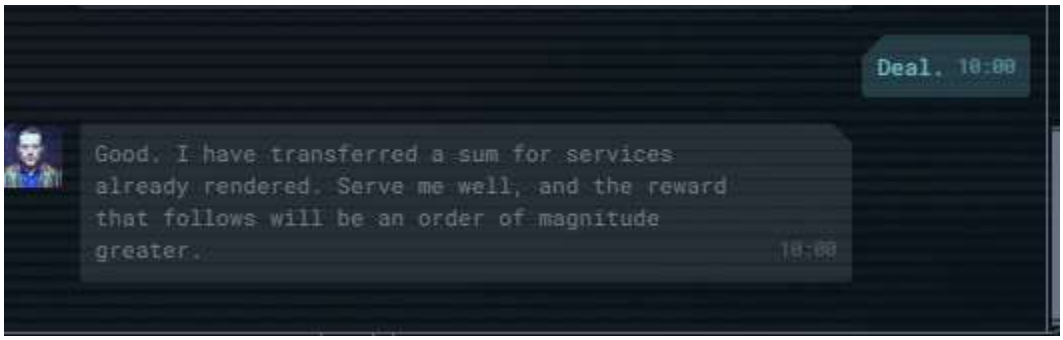

message_4237122_secured.dat

Garrett. You had no business down there. I get it - you got kids, you got debts, the credits don't stretch. But now you've gone and painted a target on your back, and it's CIS looking down the scope. They don't negotiate, they don't care about your reasons. You broke protocol. That's all they'll see, and the penalty is lead.

So here's what's gonna happen. You're getting out. I pulled every string I got left - there's a transfer to Enceladus. It comes with a demotion, but a demotion beats a cell, or worse. Best I could do, and it's better than you deserve.

The money you skimmed - keep it. Should hold you and yours for a while. And for God's sake, you listen to me now - forget that word. Urizen. Don't say it, don't think it, don't write it down. Put it in the ground and walk away.

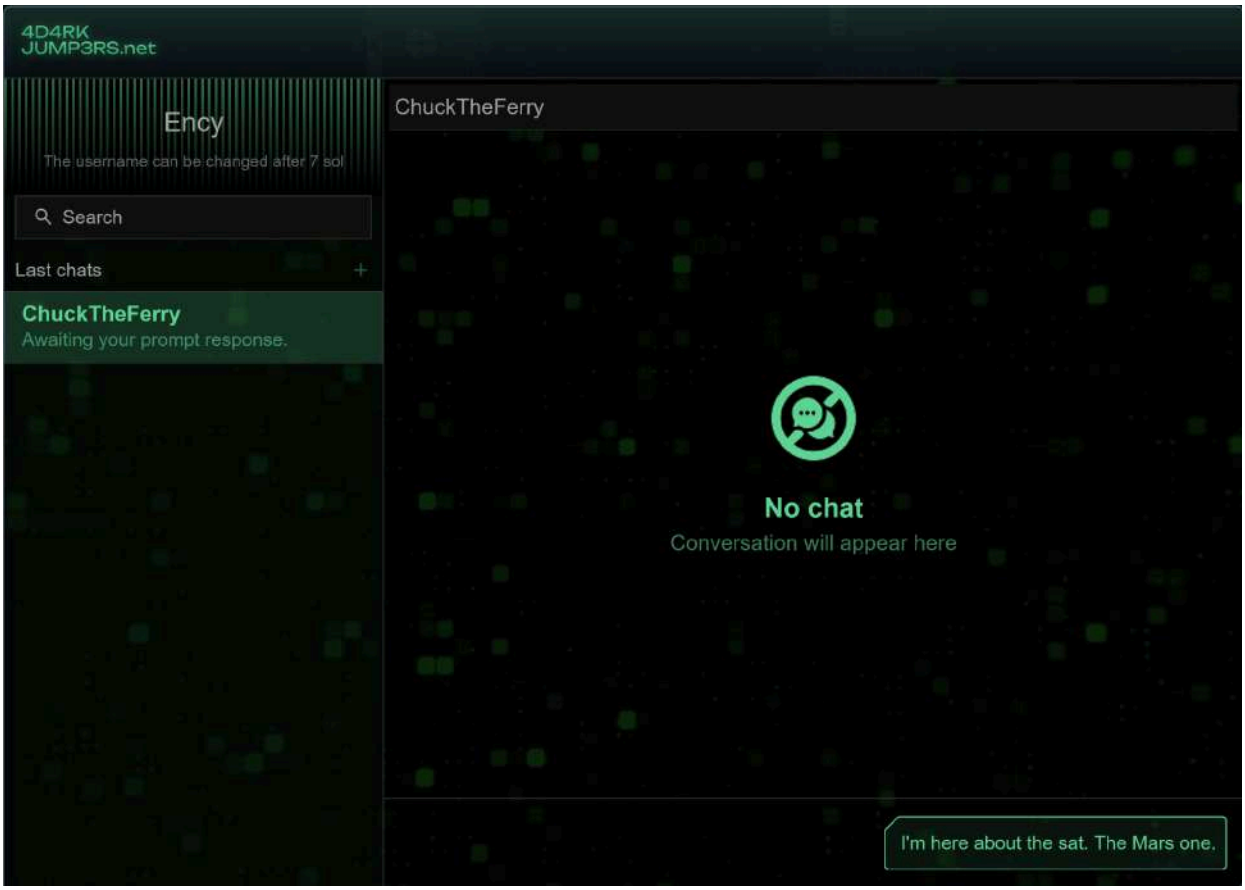

Afterwards open the corresponding new Codex entry and continue talking to Ozren.

Go to **B43271N** to collect the “**d4_CTF_lott0792_p1.vrnm**" file and then go to **B43274N** to collect the "**d4_CTF_lott0792_p2.vrnm**" file. **Both files are needed as they need to be combined**. To do so, just open one and press the “combine” button. Once combined, open the file.

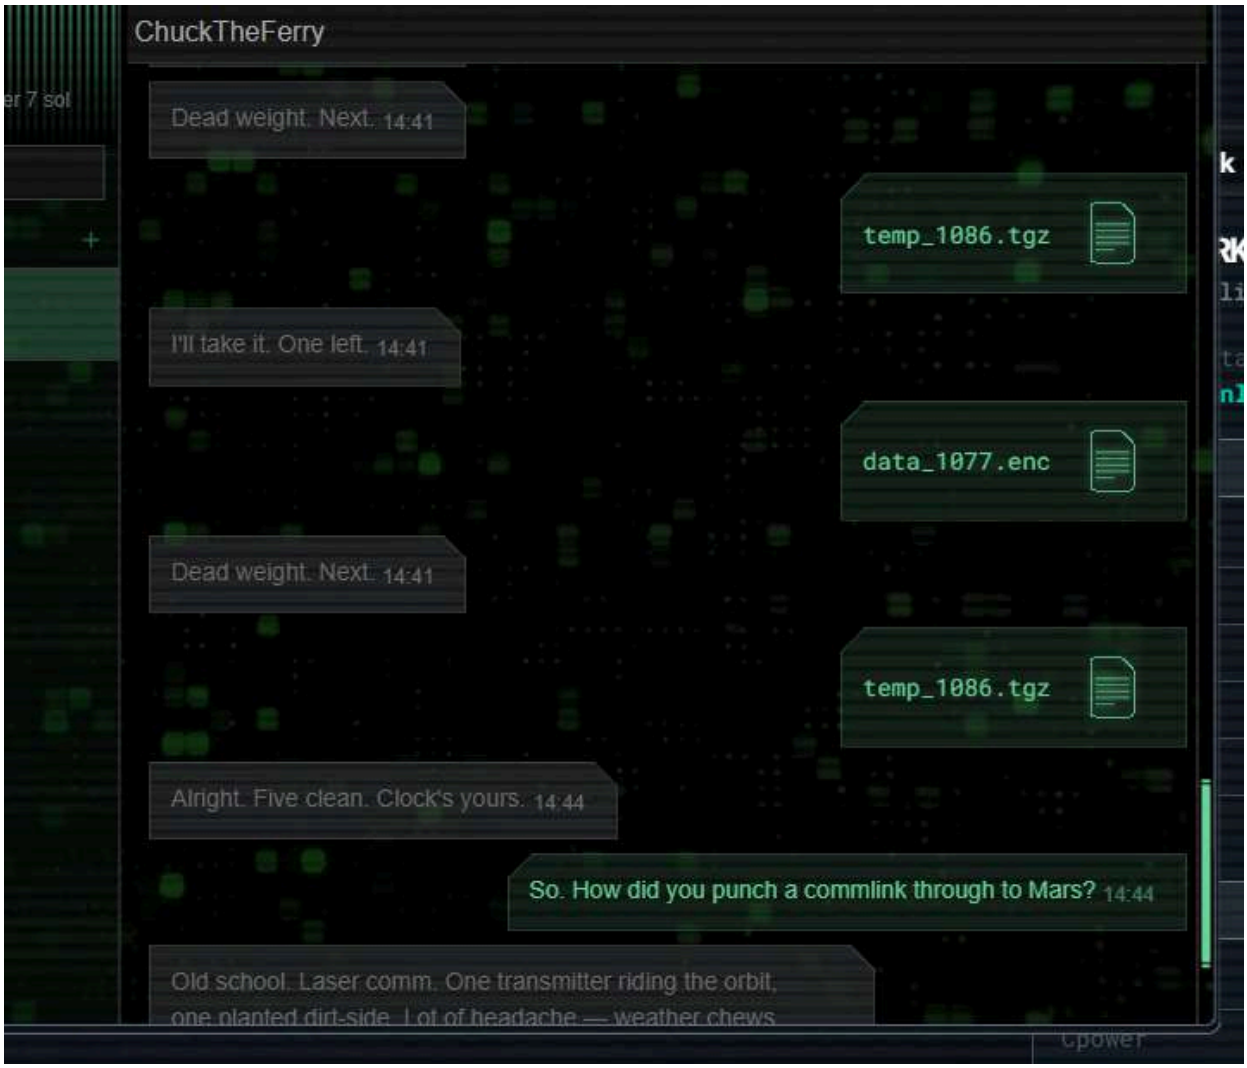

Next, you need to connect to **D4RK RM7EG** which will allow access to the website “4D4RKJUMP3RS.corie”. You need to create an account by entering a username and your FREEL ID. To get your FREEL ID, you can type “sysinfo” in the command terminal. You will be sent a verification code via Messenger.

After, it will ask for a username that you want to connect to, input “ChuckTheFerry”.

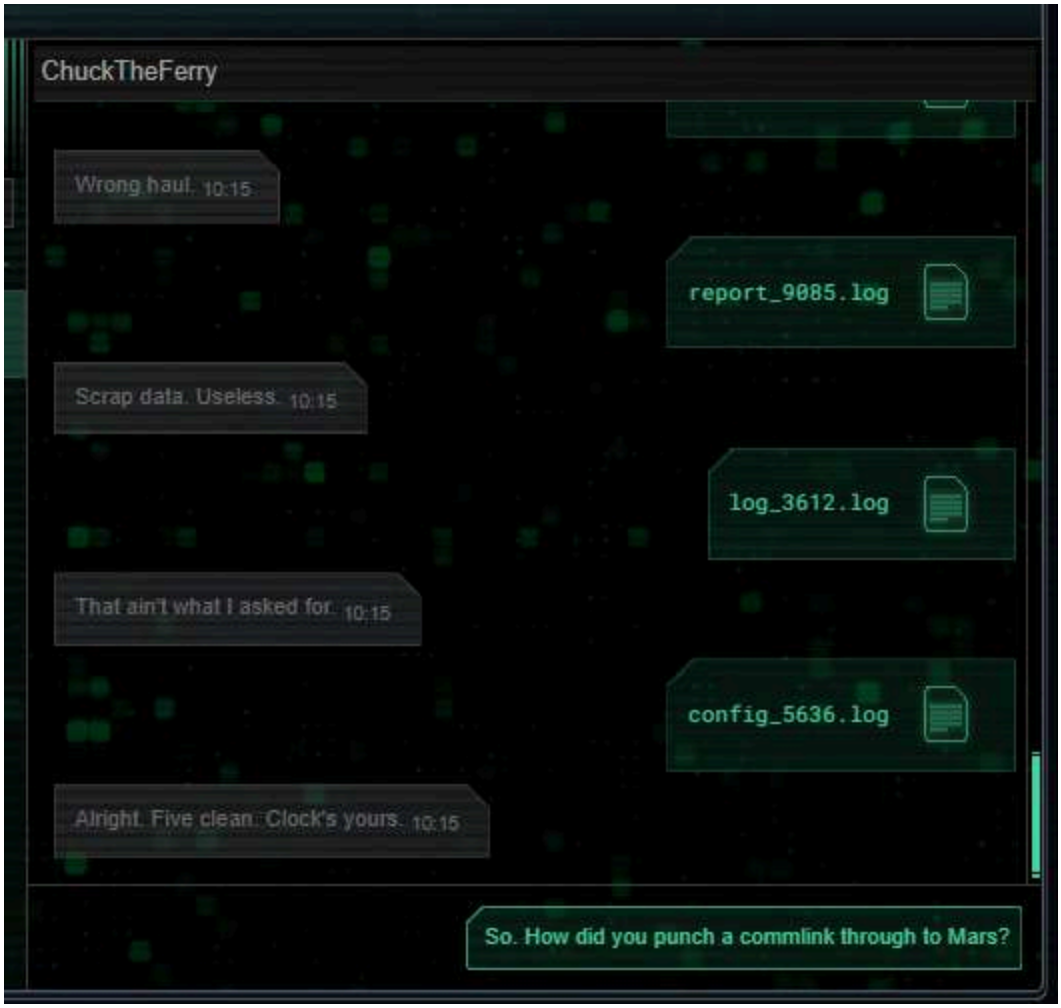

Talk to Chuck and he will ask you to attach 5 valuable files from CEDRT servers, some will work, others wont. He will tell you which ones are good and bad when you hand them over.

Edit from GigaMonkeh: - When you find a file that works, you can actually keep going back to the same server and download it again after handing it in. He’ll accept the same 5 files, for me “temp_1086.tgz” I handed it in 3 times.

Note: By using a File Search hacking module in your loadout you can successfully search servers for valuable files. Chuck will accept file types described as ‘`illegal_activity`’, ‘`crime_evidence`’, and ‘`cor3_protocol_violation`’.

Once the files have been handed over, Chuck will provide a download for "**Svyaz_PTLS2_LUCh.jpg**". Download and open it.

Talk to Ozren again

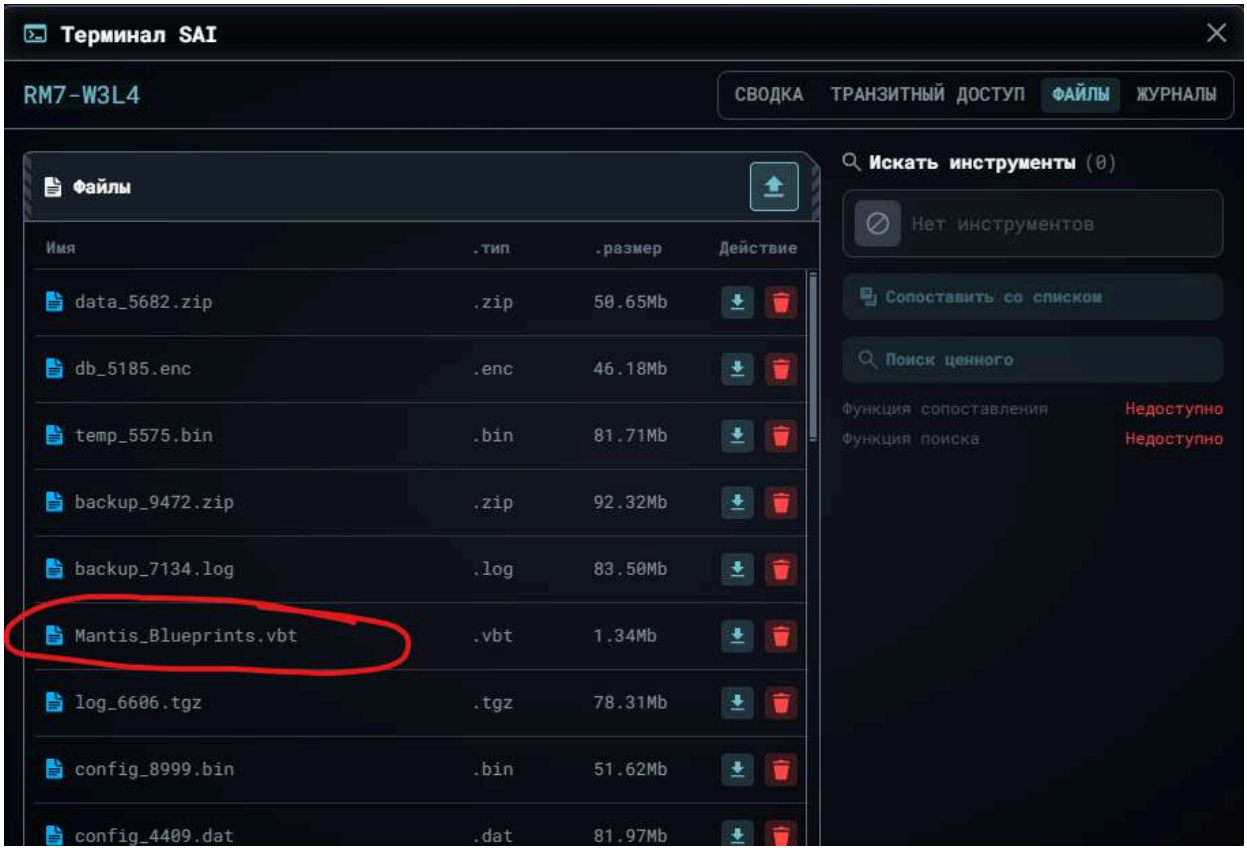

Talk to Chuck again (if you closed the browser and server, you will need to reconnect to the D4RK server and then the website)

After achieving 93% completion within the quest, the quest will automatically complete after a roughly 12-hour timegate.

Wings of Mars // The Drone

Drone Building

After you finish talking with Aurana connect to RM7-W3L4 and download Mantis_Blueprints.vbt

This will unlock the drone building.

Talk to Chris directly (not in CEDRT work chat) he will task you with handling 3 initial tasks, these correspond to Stage 01 of the Drone which you will find in the Expeditions → Personal drone assembling tab. You'll use this tab to turn in whatever is asked of you (credits, files, items, etc.) for each Stage.

Expeditions

Active Expeditions | Personal drone assembling | Archive of raids

CAPITAL PROJECT

PERSONAL DRONE PROGRAM

A long-term engineering project unlocking autonomous operations on Mars.

Start assembling

MORE RAIDS

While your mercenaries are busy running orbital contracts, your drone can head to Mars on its own. It does not take up a hiring slot, does not need a salary, and runs in parallel with your main operations.

In practice, that means one more extraction window working in the background: more raids, more resources, and faster account progression.

MARS-ONLY EXPEDITIONS

The drone gives you access to a location your mercenaries cannot reach – the Martian surface.

That opens a separate layer of content built around surface expeditions: blueprints, rare components, records, and narrative artifacts that do not appear on orbital stations. Some things can only be found by sending the drone down.

PERSONAL LOGISTICS

The built-in cargo bay turns your drone into a personal transport unit.

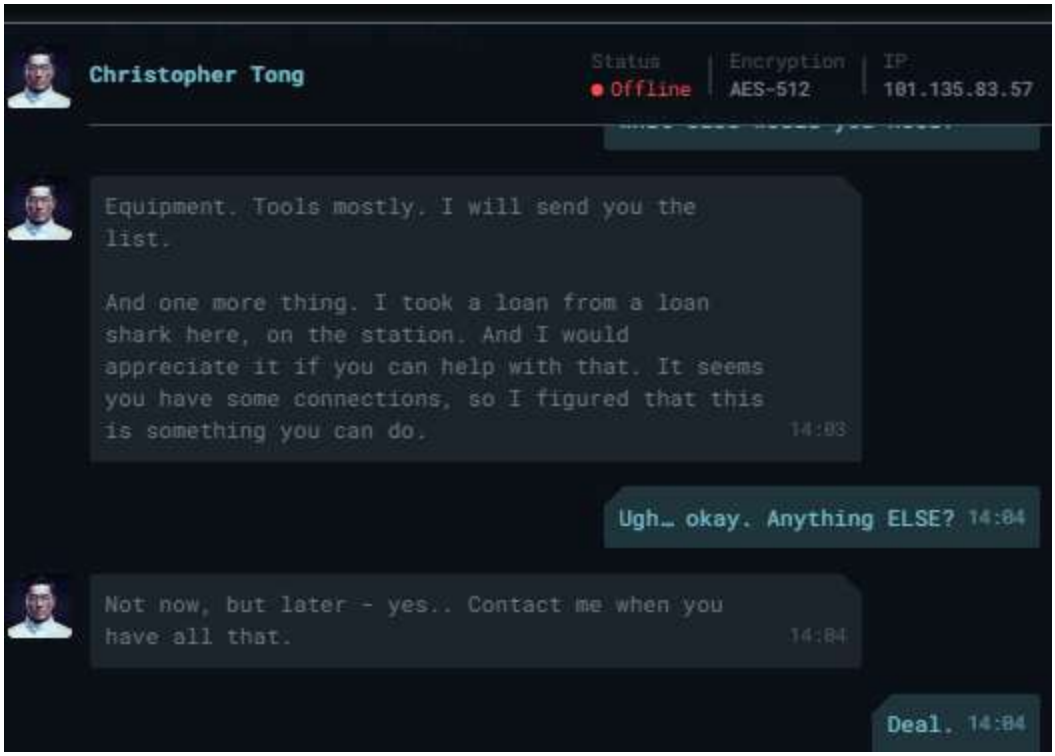

Move goods between the station and the surface, bring Martian finds back into circulation, or sell high-demand resources where they are worth more. Fewer middlemen, more control over your own supply chain.

OFF-GRID CONTACTS

Some Martian colonists operate outside standard communication channels. A drone can reach them, deploy a relay beacon, and open a direct line.

That contact can unlock separate contracts, new dialogue paths, and trade routes that are not available through regular station operations.

FUTURE UPGRADE POTENTIAL

Drone Construction Requirements List

[Stage 01] — FARLINE UNIVERSAL CRIMPER
• FARLINE Universal Crimper x1 OR 27,000 CR
• CHRIS'S DEBT — 30,000 CR

[Stage 02] — WORKSHOP SELECTION
• CUU — 40,000 CR OR Hangar — 15,000 CR

[Stage 03] — SEED FUNDING
• Seed Funding — 10,000 CR

[Stage 04] — FORGED DRONE LICENSE
• Connect to **RM7-A2ES** and download the '**TRN_OPERATOR_L3.JJQV**' file. Decrypt the file then reupload the decrypted file to **RM7-A2ES** to turn in the license stage.

[Stage 05] — WORKER CLOTHING
• Old Abibas beanie x3 & CCS "Kaloshi" Utility boots x3 OR 23,000 CR
• Soylent green bar x3 & Kosmonavt Energy Bar x3 OR 47,000 CR
• High-load auxiliary cable x2 OR 82,000 CR

[Stage 06] — SUPERCONDUCTOR
• Nergalium-79-B slab x1 OR 63,000 CR

• Core tech NIC "Nano" package x1 & Water vial x3 & Artificial milk x3 OR 72,000 CR

[Stage 07] — SHIELDING ELEMENT
• Californium-252 slab x1 OR 45,000 CR
• Holocene Holographic cable x1 OR 17,000 CR
• Scissors (CCS Field Surgeon Kit Mk2) x3 & Scalpel (CCS Field Surgeon Kit Mk2) x3 & NPO "Platforma" universal straps with backpack connector slot x2 OR 94,000 CR

[Stage 08] — ELECTRONICS
• Circuit components x2 OR 26,000 CR
• CCS Painkiller inhaler x3 & CCS small oxygen inhaler tank x3 OR 95,000 CR
• METALIFE medical components x2 OR 61,000 CR

[Stage 09] — OPTICAL SENSORS
• Holocene Holographic processor x1 & CCS Hydrogel Burn kit x3 OR 51,000 CR
• Circuit components x2 & Holocene Holographic processor x1 OR 47,000 CR

[Stage 10] — HOSTILE INFRINGEMENT PROTECTION FIRMWARE
• Complete Minigame OR 16,300 CR
• IFF CODES — 11,800 CR
• Complete Minigame & 7,450 CR

[Stage 11] — ASSEMBLY AND CALIBRATION
• SPI "Smartwrench" Powered adjustable wrench x1 & High-load auxiliary cable x1 OR 44,000 CR

[Stage 12] — ASSEMBLY SLOT
• Assembly Slot — 2,860 CR

[Stage 13] — CARGO TEST
• Cargo Test — 1,500 CR

[Stage 14] — SYSTEM INTEGRATION
• System Integration — 5,000 CR

[Stage 15] — TRANSFER
• Transfer — 4,325 CR
• This is where you must enter a 15 character name for the Drone

The drone will need to do a test expedition after all building stages are completed. Once that is complete you will be free to send the drone out on expeditions. To date we know the drone cannot currently be perma-killed and requires at least 1 durability and 1 battery to go out on an expedition.

Original Investigatory Content

~~There is currently a bugged/unknown trigger for a continued conversation with Aurana. This conversation leads to unlocking the Drone via a series of tasks with Chris Tong.~~

Devs accidentally unlocked progression for the drone for 2 players and have since rescinded the progress, but the general steps will be documented below as well as what information we gathered from it.

After you finish talking with Aurana connect to **RM7-W3L4** and download **Mantis_Blueprints.vbt**

This will unlock the drone building.

Talk to Chris directly (not in CEDRT work chat) he will task you with handling 3 initial tasks, these correspond to Stage 01 of the Drone which you will find in the Expeditions → Personal drone assembling tab. You'll use this tab to turn in whatever is asked of you (credits, files, items, etc.) for each Stage.

Equipment. Tools mostly. I will send you the list.
And one more thing. I took a loan from a loan shark here, on the station. And I would appreciate it if you can help with that. It seems you have some connections, so I figured that this is something you can do.
14:03
Ugh… okay. Anything ELSE? 14:04
Not now, but later - yes.. Contact me when you have all that.
14:04
Deal. 14:04

So, I have checked the station's registry and found 2 suitable locations for us.
14:07
First is an almost operational CUU assembly line which has been decommissioned recently. We would have to upgrade it slightly but it's almost ready to use. The renting price is 40 000 credits though plus a 4h wait till all the paperwork is done.
14:07
Second is an old abandoned hangar. It would take quite some effort to make this work but I suspect it might be worth it. We might need to zone it into several smaller rooms, get some materials, find some equipment… you know the drill. BUT. This can potentially unlock more options for us in future. Not necessarily though, could be just my imagination. You know how things shift nowadays… The cost of that hangar to rent is 15 000 credits + a lot of work.
14:07

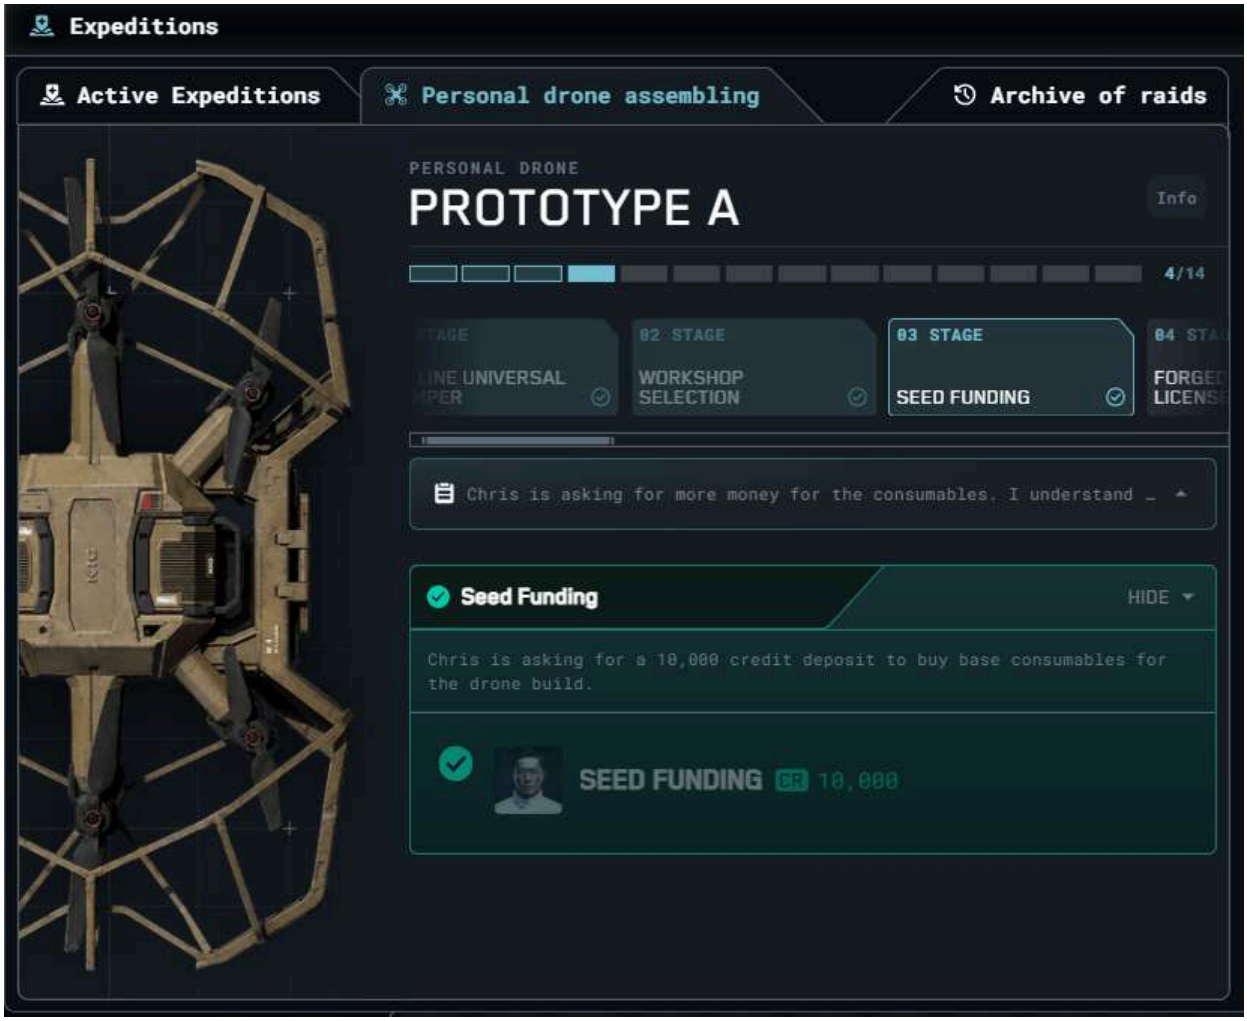

Then choose which option you want in the Expeditions -> Drone Assembly window. It is currently unknown if the choice even matters, but we're experimenting with both tracks to see if it is just a difference in money+time or makes an actual functional difference later on. For now the CUU is a 40k + 4 hour time gate while the Hangar is 15k and a 20 hour time gate.

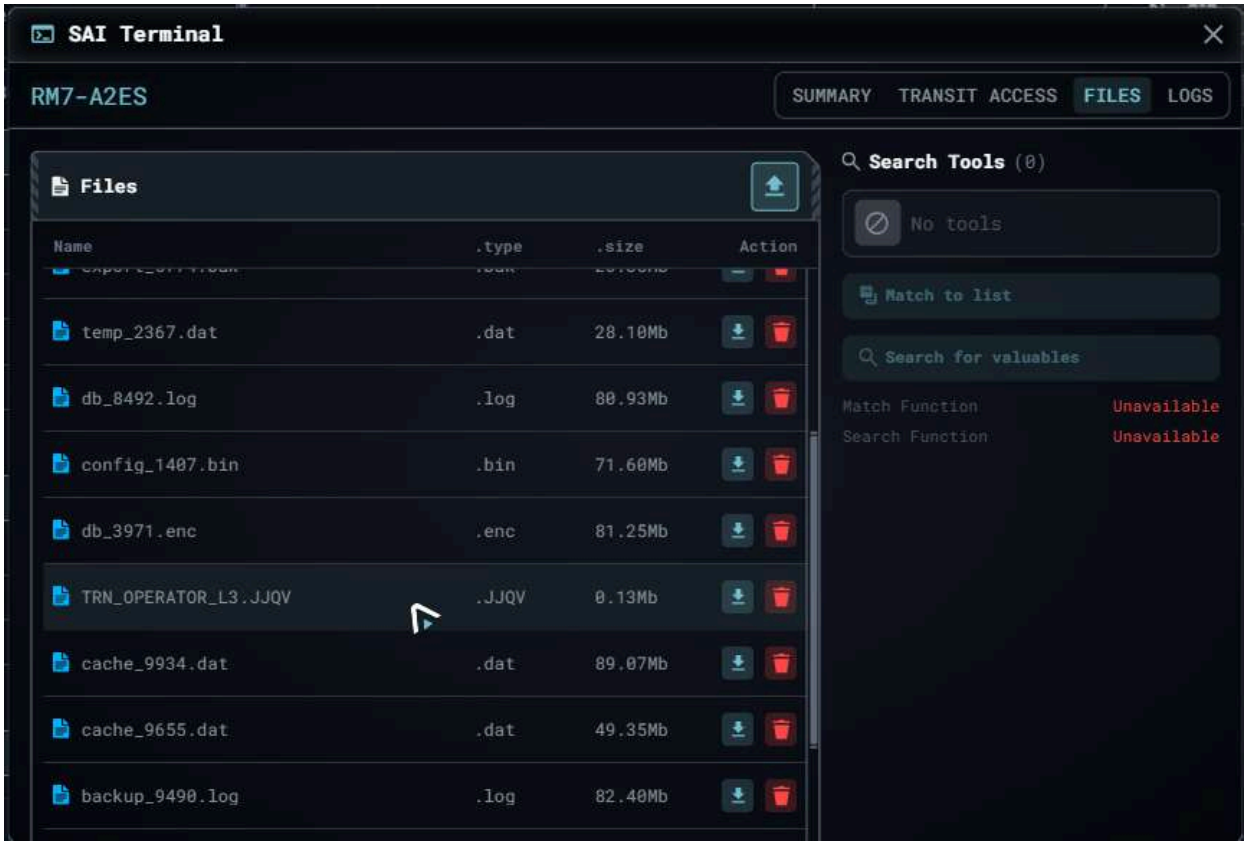

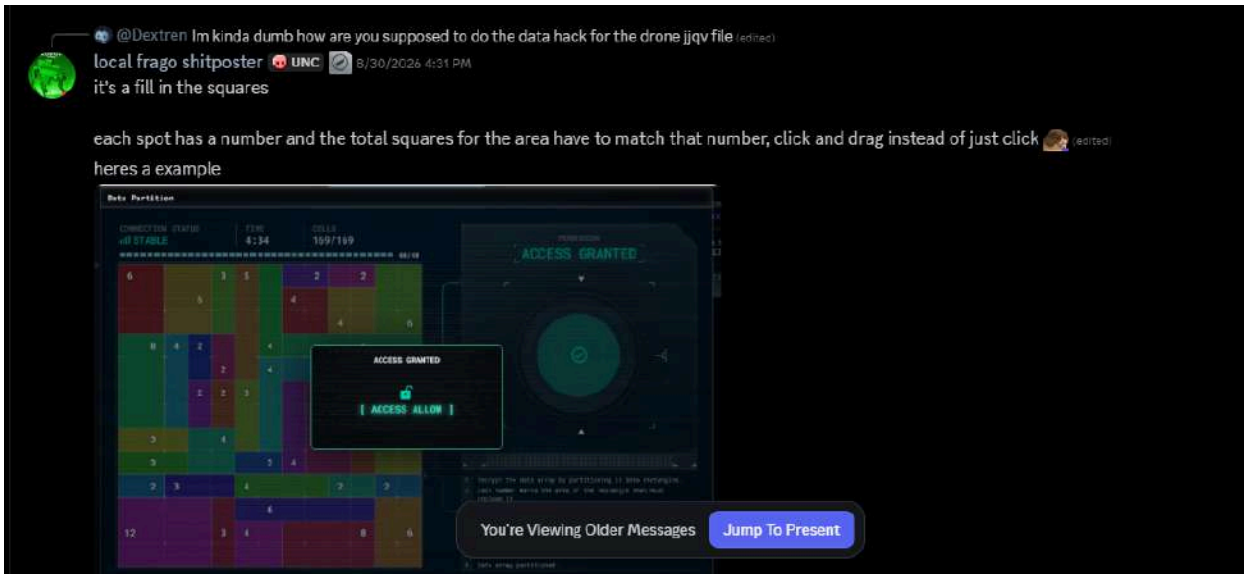

Current stages, reduced from 21 to 14:

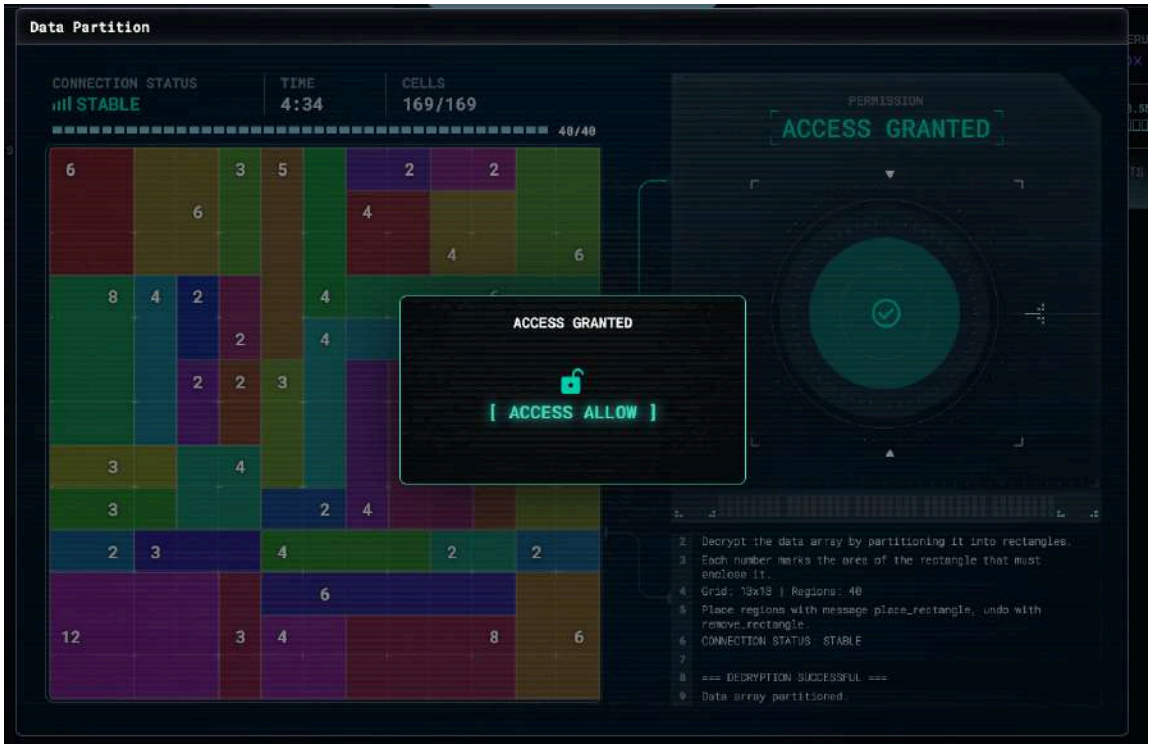

- FARLINE Universal Crimper
- Workshop Selection
- Seed Funding – 10,000CR

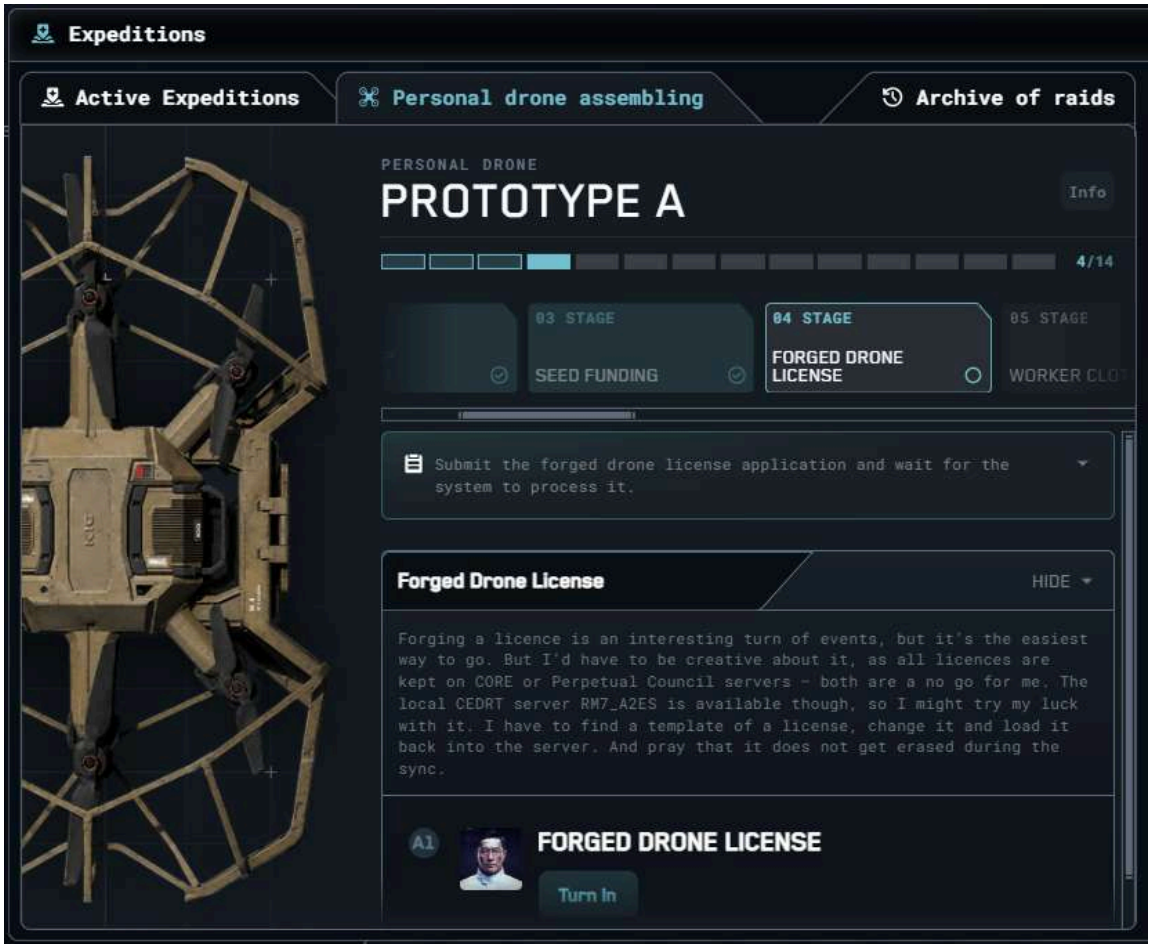

Forged Drone License – Data Partition minigame, TRN_OPERATOR_L3.jjqv downloaded from **RM7-A2ES** (To hack, you'll need Porter-triX lr8 from the USOL Market which costs 74,760 credits and requires 3.0 REP on USOL)

Spoilers Below

General steps:

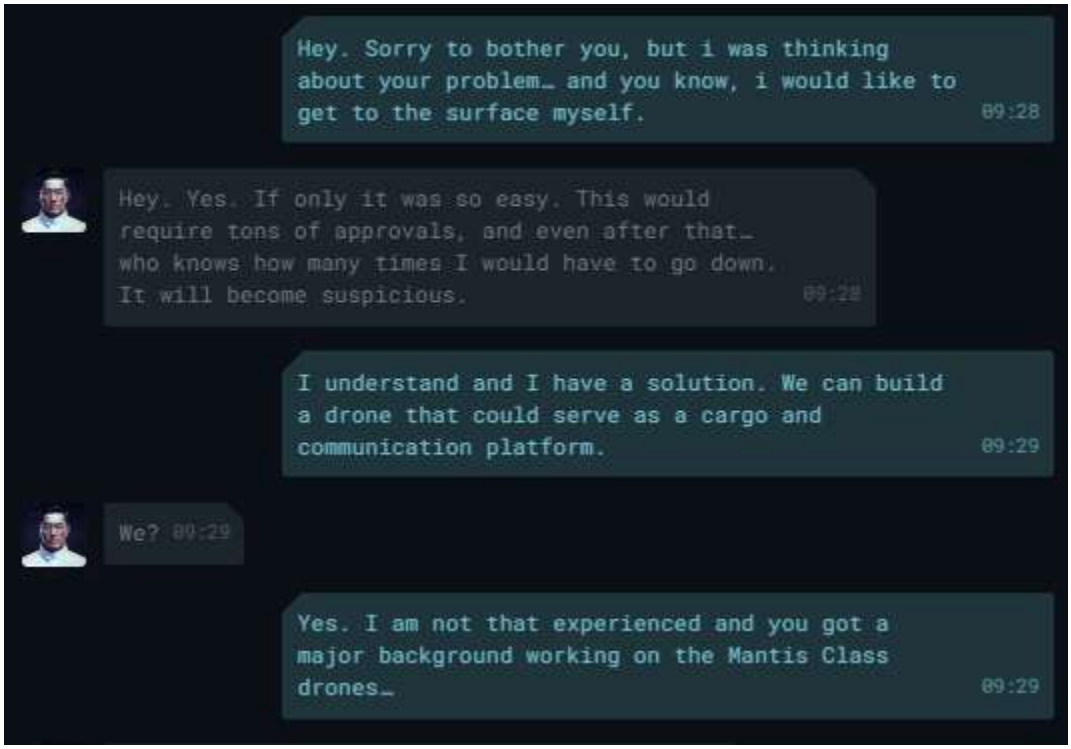

- Be contacted by Aurana (Bugged/unknown trigger)

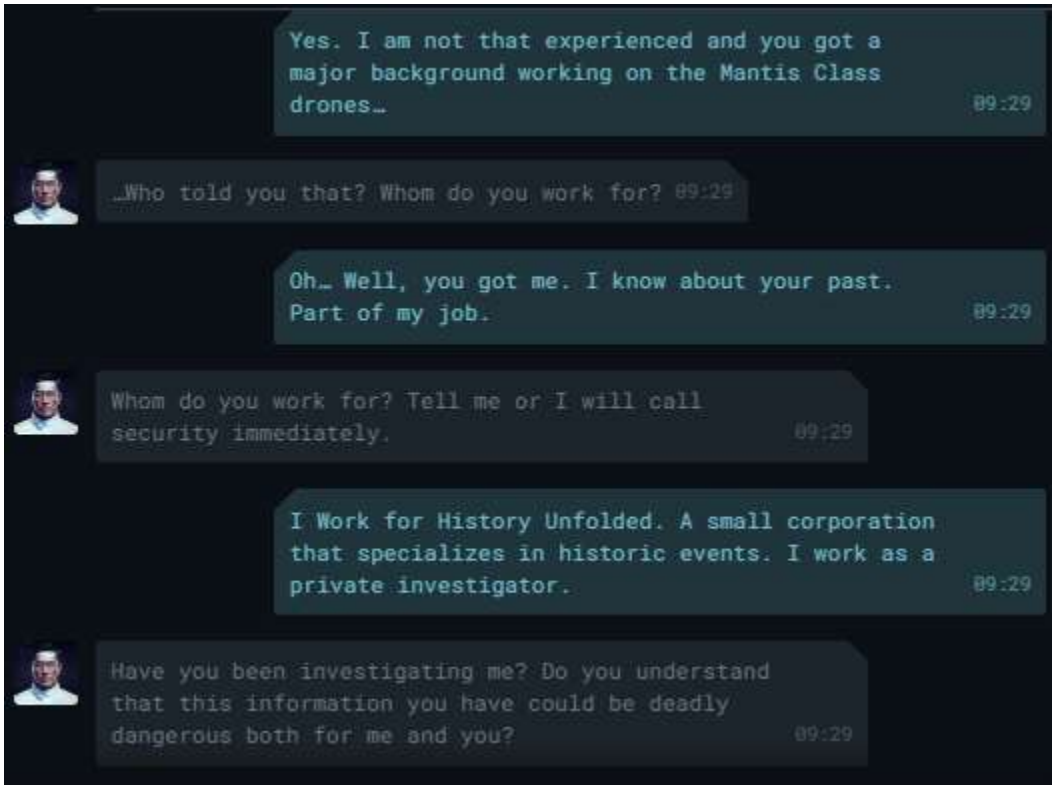

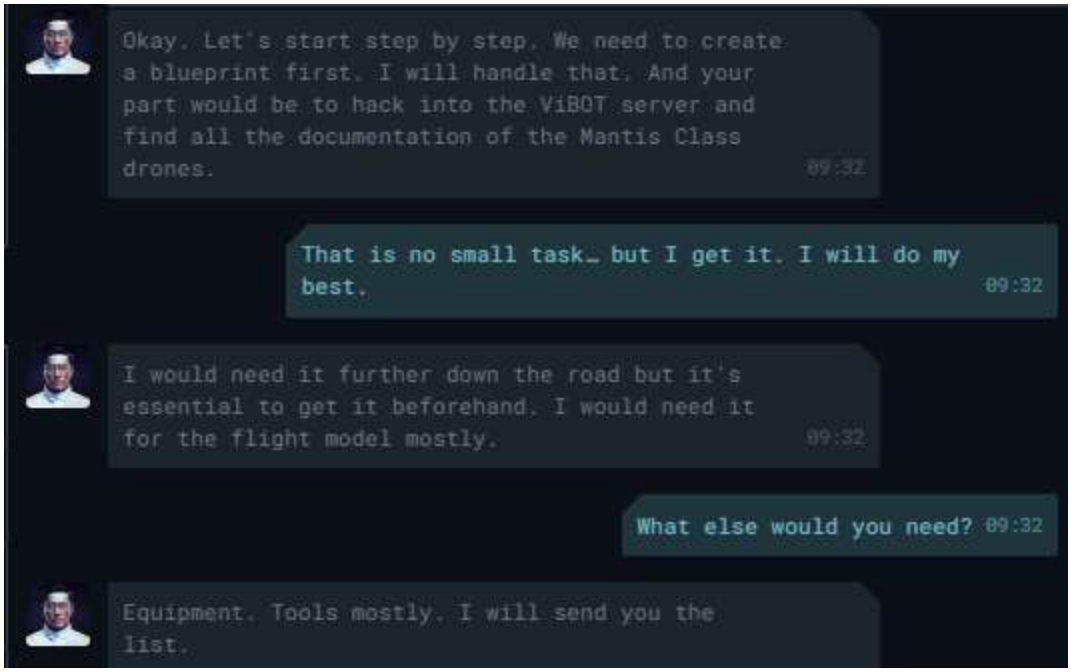

This sounds really nice, but do you understand that I have no experience in that, right? 09:28
Yes, but that is not what you told mr. Tong here. 09:28
Ah… so you want me to ask him to help with the construction? 09:28
Indeed. You NEED to have him help you with that. He is one of the best in that field. 09:28
But, how do I motivate him? 09:28
Have you slept at all today? You are usually quite fast thinking. He has a missing sister that your drone would be able to find. Considering the rules for going down to the surface are very strict I'd bet that mr Tong here would have problems with that. But if you configure your

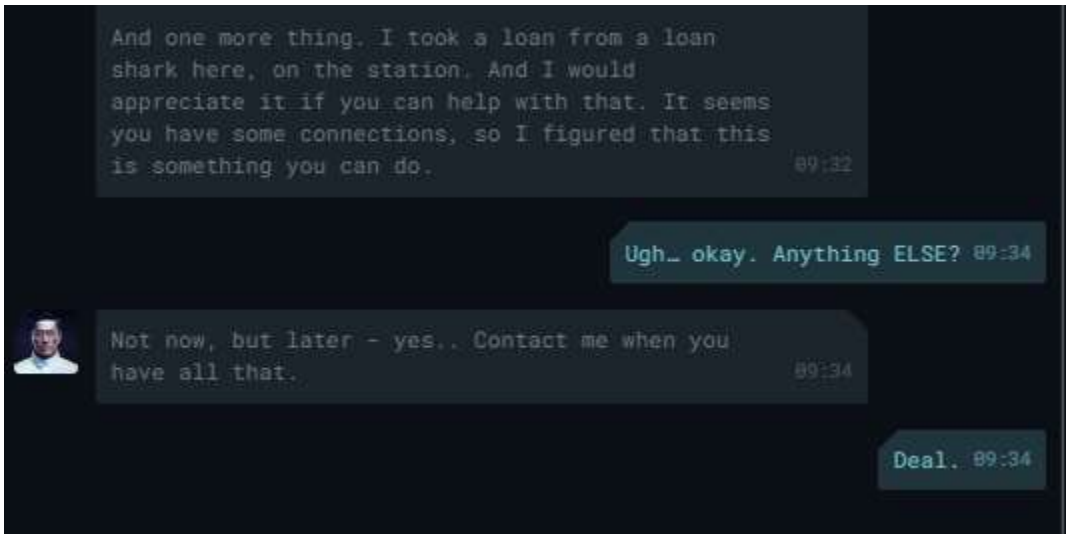

Have you slept at all today? You are usually quite fast thinking. He has a missing sister that your drone would be able to find. Considering the rules for going down to the surface are very strict I'd bet that mr Tong here would have problems with that. But if you configure your drone right - those limitations would be avoided. 09:28
But what if I get caught with it? 09:28
Talk to your friend. Offer him help and I am sure that he will find a solution. But keep in mind that he might break under investigation, so only a strong motivation will keep his mouth shut. Try not to ruin this. So far you have done great. 09:28
Ok. I will try. 09:28

- Talk with Chris Tong to be given a series of tasks

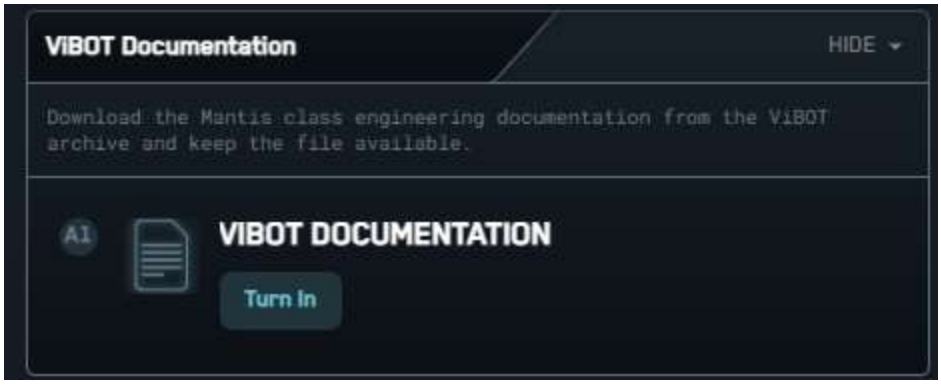

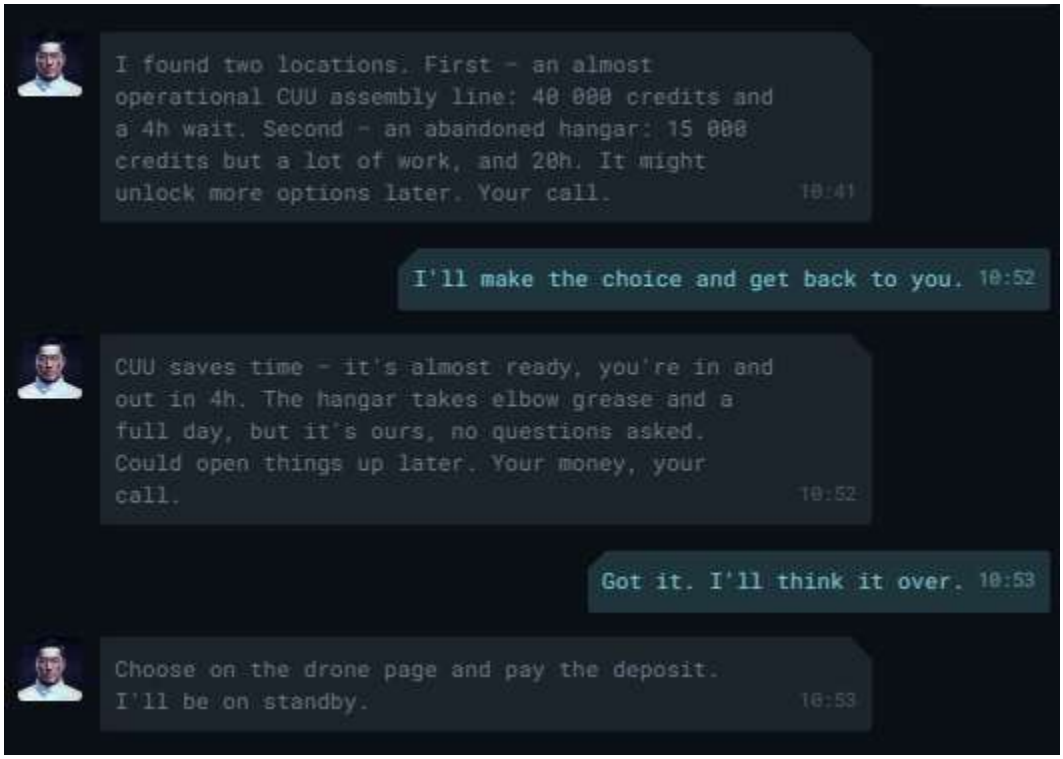

- 30k Credits to clear Chris Tong's Debt
- Acquire Viibot Archive file(s) and turn them in (We're assuming this directly refers to Act 1 Loop 1's website) It's confirmed RM7-W3L4 holds the files and is the Viibot archive server.

- Provide 21 stages of Tools/Cash/Options to Chris
  - Part of this includes time gates. From the dialogue it sounds like longer time gates provide preferential options later on. If/when we unlock this quest thorough testing will be done on the choice chain.

- Completion will unlock the Drone

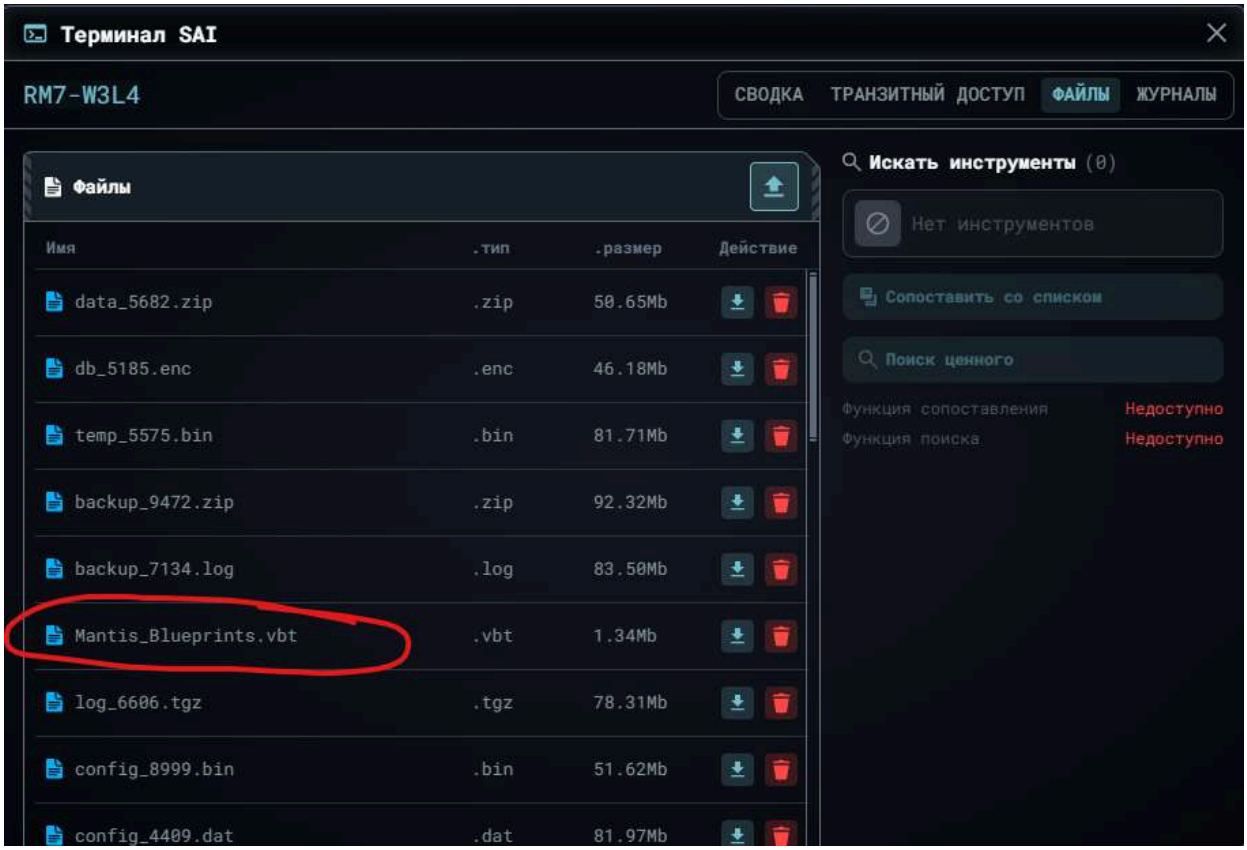

Extra image for the Active Quest showing Wings of Mars is Tier/Level 3 Quest

July 15th

Then connect to RM7-W3L4 and download Mantis_Blueprints.vbt

This will unlock the drone building.

Daily News Quests

Beginning 19th August, 2026 with Update 3.85.0 we began receiving News Articles in the unified News App on our in-game taskbar. Each new day at 3:00 PM UTC a new article will be released. Each article brings with it 1, and in some cases 2, new fragment(s) to unlock on the USSDP-V1250_Rep.AD64 Virtual Disk we unlocked on the 19th August, 2026. Each fragment is tied to a character within the Codes section of the Virtual Disk.You must complete the other quests in Act 3 in order to reach the News Articles quests described below. Finishing the Drone build is not required.

It is *VERY IMPORTANT* that you keep your Codes private, they are unique to each player. The codes provide a discount to Fragmentary Order.

- 25th August 2026

Take the listed completion percentages (%'s) with a grain of salt when trying to determine your progress on these quests. We have been noticing on several occasions the percentage of completion for starting timegates has been changed from its original value even though the exact same steps were taken by players.

Living Terraformer - 21st August

Forum Text

In this article, I'm going to tell you the truth about Martian terraforming. Most people don't know this, but the real terraforming process on Mars uses blue mold. Not machines. Not towers. Not some shiny miracle engine from a corporate promo. Blue mold. A living culture grown in secret biolabs and then pushed into soil systems, filters, old terraforming units, water loops, oxygen lines, and everything else they don't show you in the brochures.

And before the smart people come in laughing, just use your head for five seconds. How do you change dead soil? How do you change air? How do you make a dead environment slowly turn into something that can hold life? You don't do that with metal boxes. Machines only pump, heat, mix, open valves, close valves. The real work is biological. Bacteria. Algae. Fungi. Mold. Small living things that eat, spread, adapt, and change the environment around them. Normal mold would die there, obviously. So they made another kind. A blue one. Something that can survive cold, radiation, acid, dry air, bad soil, and almost no water.

At first it was just a tool. That is always how they sell it. Just a culture. Just a bio-layer. Just a stabilizing organism. Just a little helper for the terraforming systems. They put it into filters, pipes, vents, cleaning units, underground tanks, soil processors, all the places where nobody

looks unless something starts leaking. And it worked. That is the funny part. It actually worked. The blue stuff started adapting. It started growing where it should not grow. It started feeding on things it should not be able to feed on. It started spreading through old systems like it knew where to go.

So tell me why everyone is so sure it stayed stupid.

You leave a living thing inside old terraforming systems for years. Around heat, pressure, chemical waste, dead tissue, human waste, old control circuits, signal lines, sensor grids, and closed air loops. You let it sit there long enough to learn every little rhythm of the system. You think it stays "just mold" because some corporate scientist wrote that on a label? No. It becomes part of the system. Then it becomes the system.

Now look at RepEnt.

They tell you RepEnt bodies are clean grown shells. Empty bodies. Safe bodies. Remote-operated bodies. A miracle of modern labor. You buy a license, connect through the Dog Chip, control the body, do the job, disconnect, go home. Nice and simple. But that is not how bodies work. A body does not just accept another mind because you stuck a chip into it. A body fights. A body rejects. A body remembers. Unless you soften it first.

That is where the blue mold comes in.

RepEnt bodies are not clean shells. They are people. Old people, broken people, erased people, reshaped people. They change the face, clean the memory, rebuild whatever they need to rebuild, and then they run the body through the blue culture until it becomes obedient enough to take an outside signal. The Dog Chip is not the real control system. The Dog Chip is just the leash. The mold is what makes the body stop resisting.

That is why operators come back weird after sessions. That is why they say their hands feel wrong. That is why they stop sleeping right. That is why some of them talk about the body still being there after they disconnect. They think it is stress. They think it is phantom feedback. They think it is "temporary dissociation." No. They touched the colony. For a few hours, they were plugged into something living that was also reading them back.

And that is the part nobody wants to talk about.

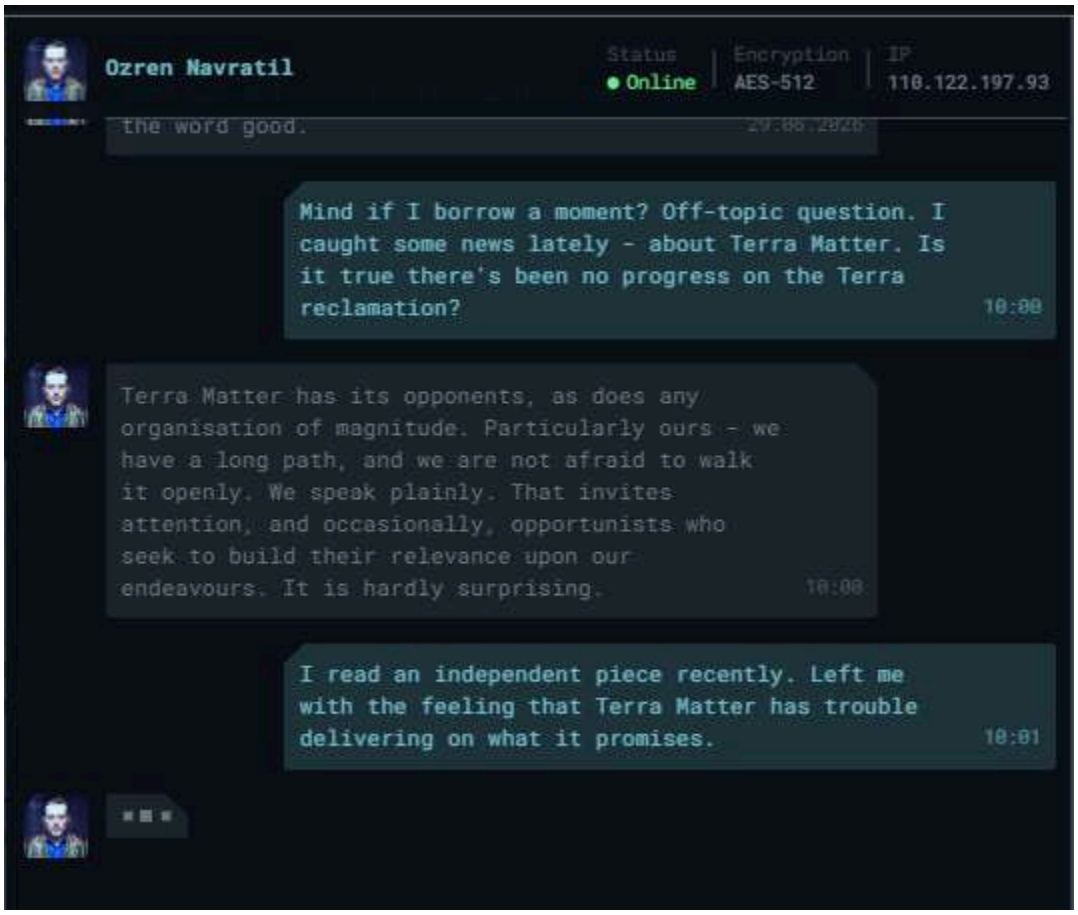

Every operator teaches it. Every RepEnt session gives it more data. How people move. How people panic. How people follow orders. How people kill. How people obey. The blue mold was first used to terraform dead ground. Then it learned pipes. Then it learned bodies. Now it is learning minds.

So no, the living terraformer is not going to take over the Solar System by crawling across the floor like some monster from an old movie. It does not need to. People will carry it themselves.

In RepEnt bodies. In filters. In medical cultures. In sealed containers. In "safe" lab samples. In Dog Chip programs. In every idiot who thinks he is just buying a job license and a future.

One day everyone will be connected to the same wet blue brain, and you will still call it progress.

Terra Matter’s Broken Promise - 22nd August

Connect to **RM7-N2ECP** and download “**Valeriani_TM_Ozren_Navratil_request_3.odt**” and open the file (if you had not already done so previously)
Speak with Ozren Navratil in the Messenger and finish the conversation to complete the quest.

Bug Addendum discovered 9/24/2026 - If you are stuck on the “Then go. And return with something worthy of the word good’ dialog you need to open the “The Peak of Demand”, “Orbit-12 star dies…”, and “Terra Matter’s Broken Promise” news article.

The Pit - 23rd August

Open the Forum entry to complete the quest and unlock the fragment. There is an audio file further down in the forum thread you can download.

USOL Housing Scandal - 24th August

Open the news article, open the forum thread, download the image file "**breakdown_log_arcpoint.jpg**" from the thread, connect to **URM7-S5L2** and download the 3 residential report files (**RESIDENTIAL_CONVERSION_REPORT_Q2_2251**, **OUTBOUND_PLACEMENT_TRACKER_H1_2251**, **HOLD_INVENTORY_STATUS_2251**). Open all the files to complete the quest and unlock the 6th fragment.

USOL and breakdowns — anyone else?

half times the price. We said no. Two neighbors said yes. Their old units are empty now — 'technical reserve'.

anon_vestri 07/03/2251 | 09:22 AM

I'm not naming the station. I worked in the technical department of a USOL facility. Former.

Here's what's interesting. We had an internal maintenance schedule. It had a section called 'priority blocks for renovation'. A list of blocks, a timeline, very clean.

Except there was no renovation. They just switched something off according to the schedule and waited for residents to react.

I left after I understood that these weren't technical problems.

Attaching a file. Not from our documentation — a screenshot from a contact at another facility. Same pattern.

[breakdown_log_arcpoint.jpg — attached. 1.2 mb. Download.]

breakdown_log_arcpoint.jpg Download

Terra Mater - 25th August

Open the Forum thread “Astrocrop VELA-7 — the steak that 'looks back'. Anyone else?” to complete the quest and unlock the 8th fragment.
More lore can be found in the corresponding News article.

Astrocrop's new synthetic meat variety is here. Consumers s…

Back

ASTROCROP'S NEW SYNTHETIC MEAT VARIETY IS HERE. CONSUMERS SAY IT LOOKS BACK.

SNN 08.07.51 SNN Staff · TECH & LIFE

Astrocrop, the orbital food production company known for its line of synthetic protein products, has unveiled VELA-7 — a new generation of cultured meat that the company describes as 'the closest thing to real beef available beyond Earth.'

Astrocrop Grows People - 26th August

Open the thread “Astrocrop thread. I think they're growing people. Hear me out.” (at the bottom of Forum) to complete the quest.

There are multiple documents you can download in this thread, they are not (currently) required for completion.

Neuroscreen Leak - 27th August

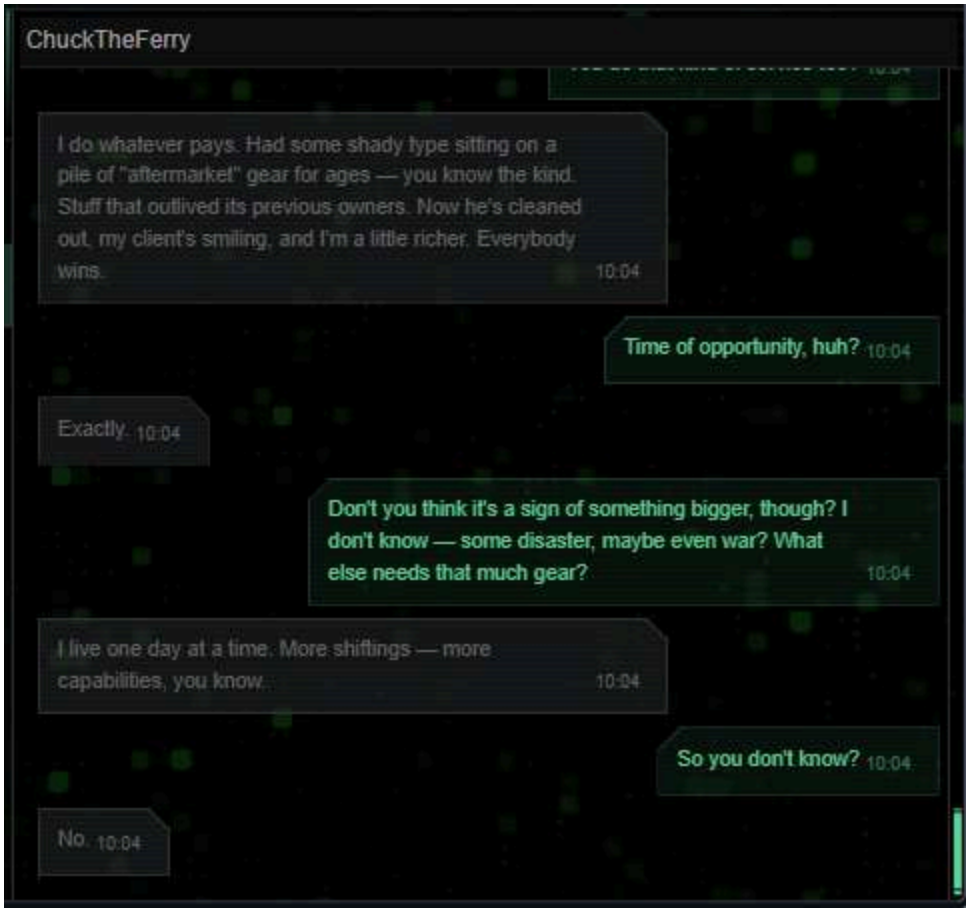

Open the forum thread and download and open **DOGCHIP_BRAIN_MAP_FAKE.jpg**, then download and open the **MOC_NEUROSCREN_LEAK.png** file to complete the quest.

The Peak of Demand - 28th August

If you have not completed the Private Matters quest where you talk to Chuck, you need to complete that before doing this.

Connect to **D4RK RM7EG** which will allow access to the website “4D4RKJUMP3RS.corie”. Finish the conversation to complete the quest for this fragment

ChuckTheFerry
Deal. 10:20
Off-topic. You catch the news lately? All this stuff about equipment prices — skyrocketing, and still climbing. 10:04
Nah. Not really my corner of the market. Or my interest. But I'll admit — it's getting big. Pulling in more people by the day. Even I've had work off the back of it. Jobs like "find me a seller who's still got stock." 10:04
You do that kind of service too? 10:04
I do whatever pays. Had some shady type sitting on a pile of "aftermarket" gear for ages — you know the kind. Stuff that outlived its previous owners. Now he's cleaned out, my client's smiling, and I'm a little richer. Everybody wins. 10:04
Time of opportunity, huh? 10:04
Exactly. 10:04

Orbit-12 - 29th August

Connect to **RM7-E1L3** and download the '**ARKWRIGHT_WARD_CHAT_PARTIAL.log**' file,
Connect to **RM7-N2ECP** and download the '**WARD_HOLOSCENE_CONTACT.log**' file
Opening BOTH of the files should complete the quest. Looking up the 3 involved people is optional, we include it here for tracking purposes.

Naked Party on Vesta Ring Station: guests lost their jobs, sponsors lost their dignity

PLANETSIDE CONFIDENTIAL 03.06.51 GLASSMOUTH

A closed party on Vesta Ring Station has turned into exactly the kind of scandal after which sponsors suddenly remember the words "personal responsibility," "private initiative," and that they simply "walked through the wrong door."

The event took place on a rented luxury deck under the name Soft Eclipse. It was supposed to be a closed gathering for actors, streamers, young executives, heirs of wealthy families, media investors, tech geniuses, and people whose main claim to

Back

Marcus Vale still has not made contact after "72 hours without CORIE" challenge

PLANETSIDE CONFIDENTIAL 04.06.51 JUSTIN PHILLIPS

More than 72 hours have passed since Marcus Vale began his "72 hours without CORIE" challenge, but the influencer still has not made contact.

Marcus, a CEDRT employee also known for his lifestyle experiments and tech challenges, announced the start of the trial earlier this week. The rules were simple: three days without CORIE's assistance.

After the deadline passed, Marcus still did not appear.

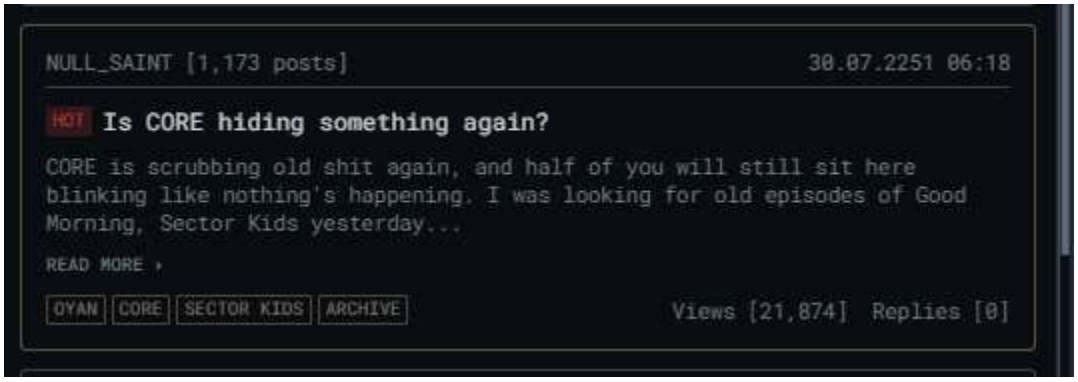

Open the News Article and the quest autocompletes.

July // Sector Kids - 2nd September

Sector Kids

Open the Forum post to complete the quest Sector Kids.

July

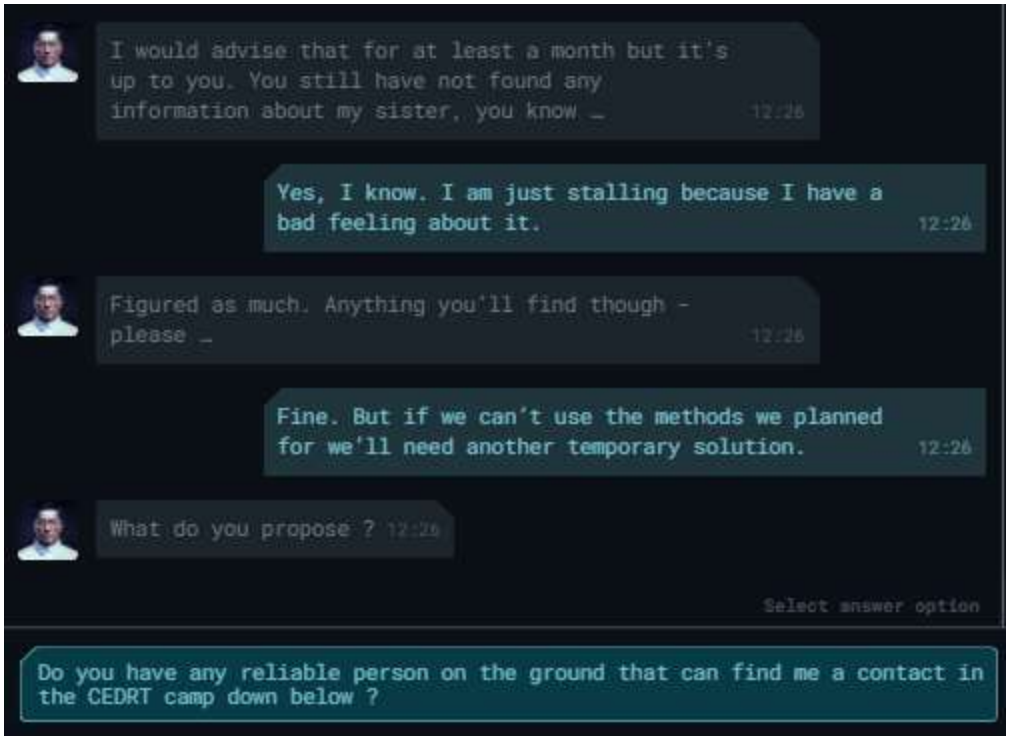

You will have a new message “Hey Chris. Any news ?” available to send to Chris Tong in the messenger app. Complete the dialog and then message Aurana. Once finished talking to her, message Chris Tong again. After finishing that conversation, connect to **RM7-N1L1** and download the file **cedrt-ddab-bckp213451.cr3z**. Unpacking it will give you a new folder, CEDRT Dossiers. There are 20~ files within the folder, most will be corrupted files you

can skip over. Others will be .ab52 you can decrypt to either get another corrupted file or a dossier. Once you have decrypted all 5 files, check your codex entries and wait. This will leave you at 75% progressing through the quest and after a 5 hour timegate the quest will autocomplete providing you with the fragment.

Illustrated steps:

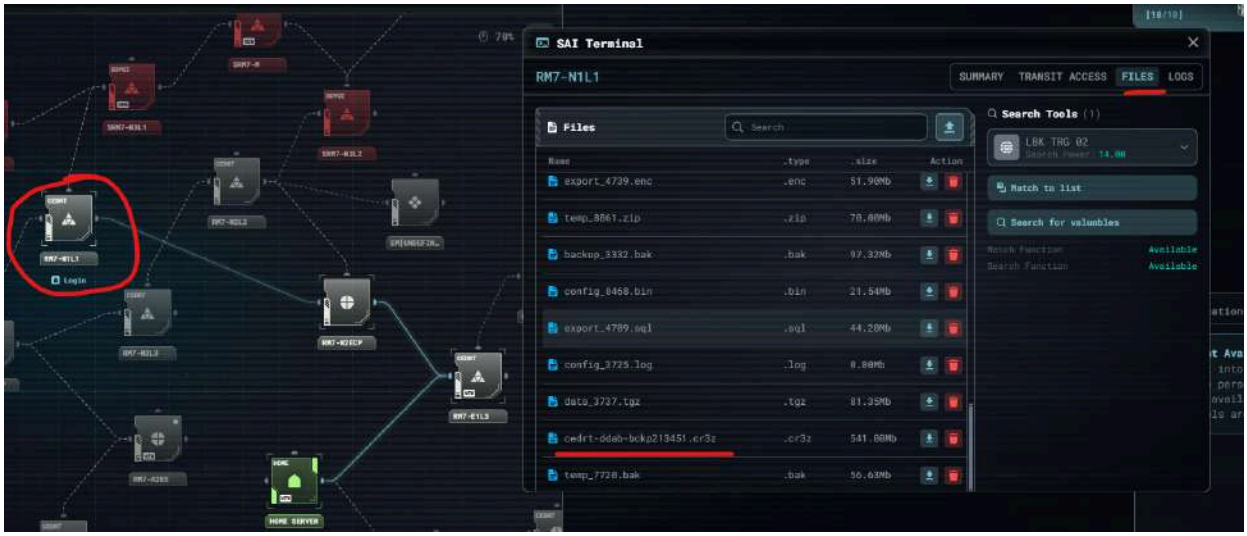

Need to find info on **Miss Gromova**

Connect to **RM7-N1L1** and download **cedrt-ddab-bckp213451.cr3z** from files tab

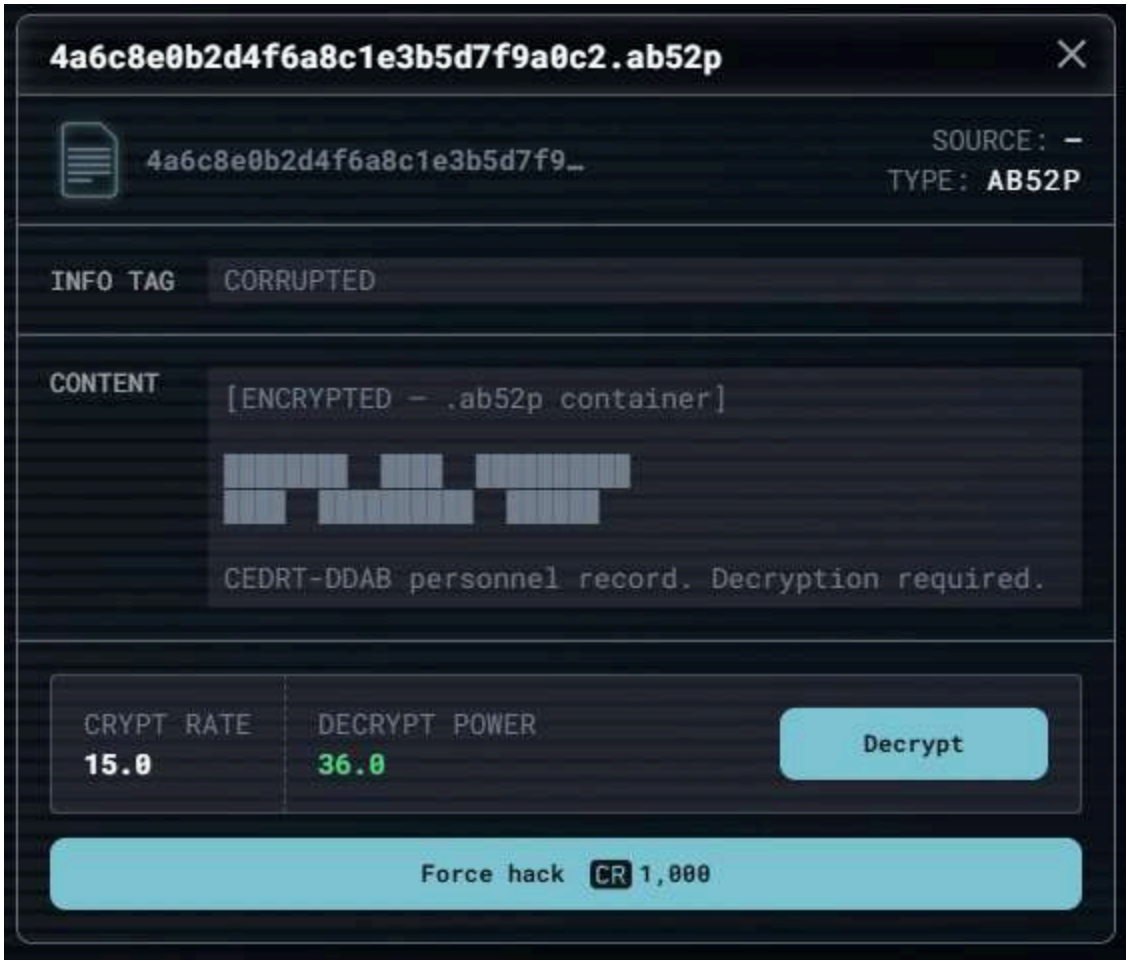

Double click on the **cedrt-ddab-bckp213451.cr3z** file and it'll deploy the '**CEDRT Dossiers**' folder onto your desktop.

You need to decrypt all the dossier files one by one, either by having the correct decryption software equipped, or using 'force hack' with credits

Some files will be empty, some will be personnel files, you'll need to decrypt all 20 to progress. In total you'll get 5 dossier entries, and one of them will be **Miss Natalia Gromova**

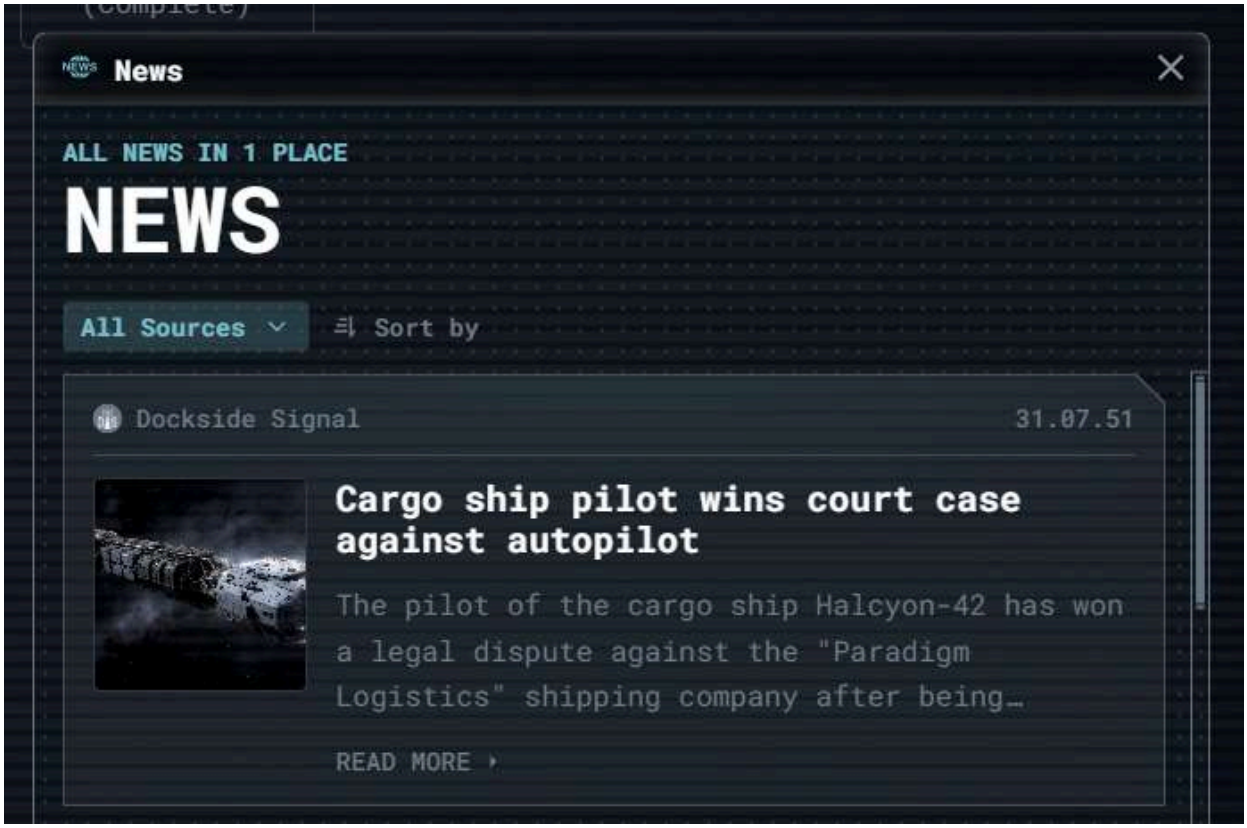

After 5 hour timegate

Halcyon-42 - 3rd September

Open the News Article “**Dockside Signal**” and the quest autocompletes, securing the B2 Fragment.

Cargo ship pilot wins court case against autopilot

Back

CARGO SHIP PILOT WINS COURT CASE AGAINST AUTOPILOT

DOCKSIDE SIGNAL 31.07.51 RIAN SOL

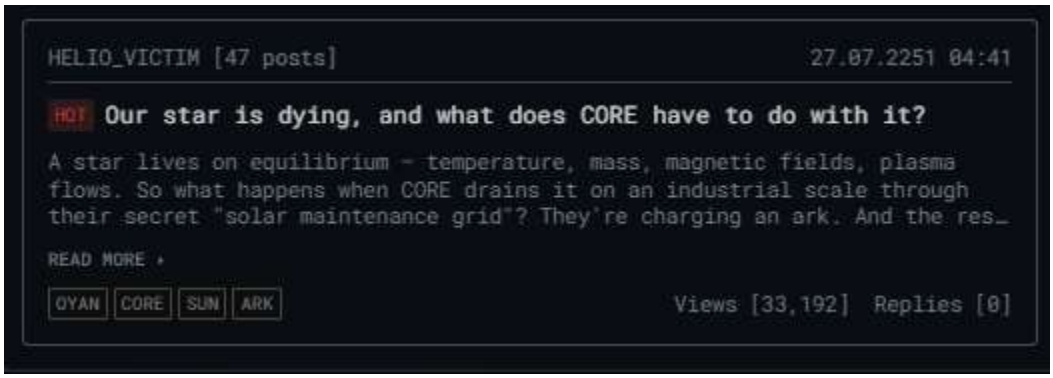

The pilot of the cargo ship Halcyon-42 has won a legal dispute against the "Paradigm Logistics" shipping company after being suspended from flights for manually disabling the autopilot during approach to a cargo dock.

The incident occurred on approach to Khepri Transfer Hub. According to the carrier's official statement, pilot Martin Crow violated the automatic approach regulations and took control without dispatcher confirmation. The company classified his actions as "unjustified interference with a safe autopilot mode."

Our Star Is Dying - 4th September

Open the forum thread to complete the quest and unlock the fragment

New Lent // **August** - 5th September

New Lent

Church announces new Lent against artificial food

Back

CHURCH ANNOUNCES NEW LENT AGAINST ARTIFICIAL FOOD

DOCKSIDE SIGNAL 29.07.51 ELENA MARTYNOVA

The Orthodox community of Novaya Ladoga Station has announced a new Great Lent, which has since been supported by the Greater Orthodox community, during which believers are encouraged to give up artificial food, synthetic proteins, and products made through a full laboratory cycle.

The decision was published by the parish council of St. Nicholas Church. The statement says this is not a ban, but a "voluntary spiritual restriction" meant to remind people of the connection between the body, labor, and living earth.

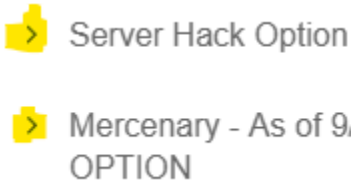

Open the news article to unlock the fragment.

August

24-hour timegate after the July quest… just to get to the below steps

Talk to Chris Tong. You can either hack a server or hire a USOL Mercenary for this part. We would recommend hacking the server as there is currently a bug affecting the end state of the Mercenary option. Both options are listed has headings below, you need to hover next to the heading to expand them

Server Hack Option

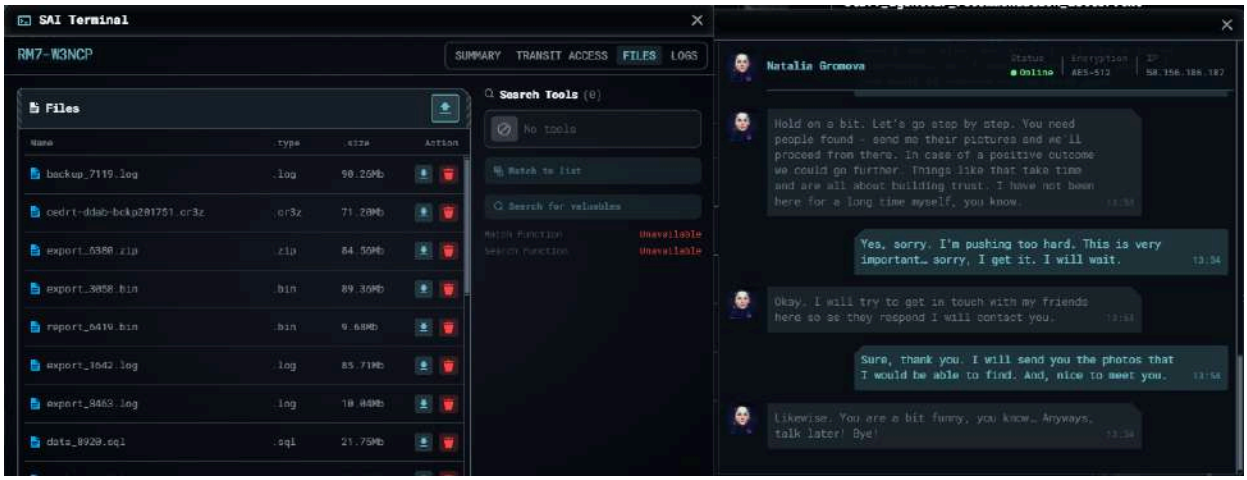

He provides you an IP address **855.529.2.04**, search for it in the Network map to discover the **RM7-ST/A-S4** server. Connect to it, hack it, and download the **e4-08-92251_auto_control_11-ST59.raw** and **e4-08-92251_auto_control_14-ST59.raw** files, open both files in this particular order, then proceed to chat with Chris again.

Mercenary - As of 9/6/2026 this WILL bug your Mercenary queue out DO NOT USE THIS OPTION

For the Mercenary option, open the USOL Market and select any mercenary to send to Transmitter ST4-RM7 for the task of Data Extract.Upon completion of the raid the **e4-08-92251_auto_control_11-ST59.raw** and **e4-08-92251_auto_control_14-ST59.raw** files will be on your desktop. Open both files then proceed to chat with Chris again.

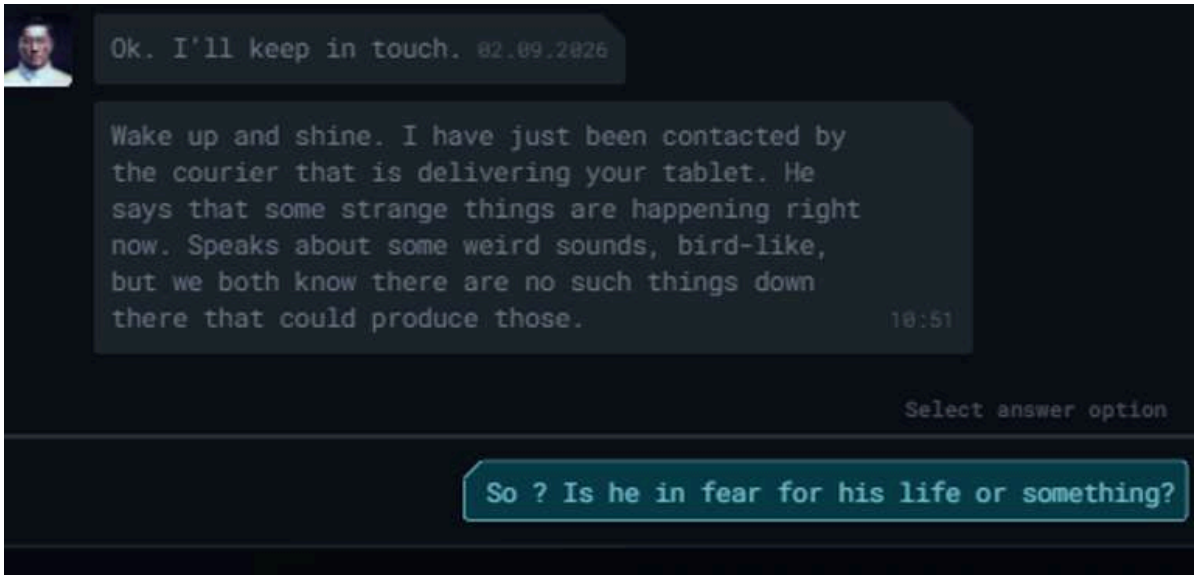

Next Step

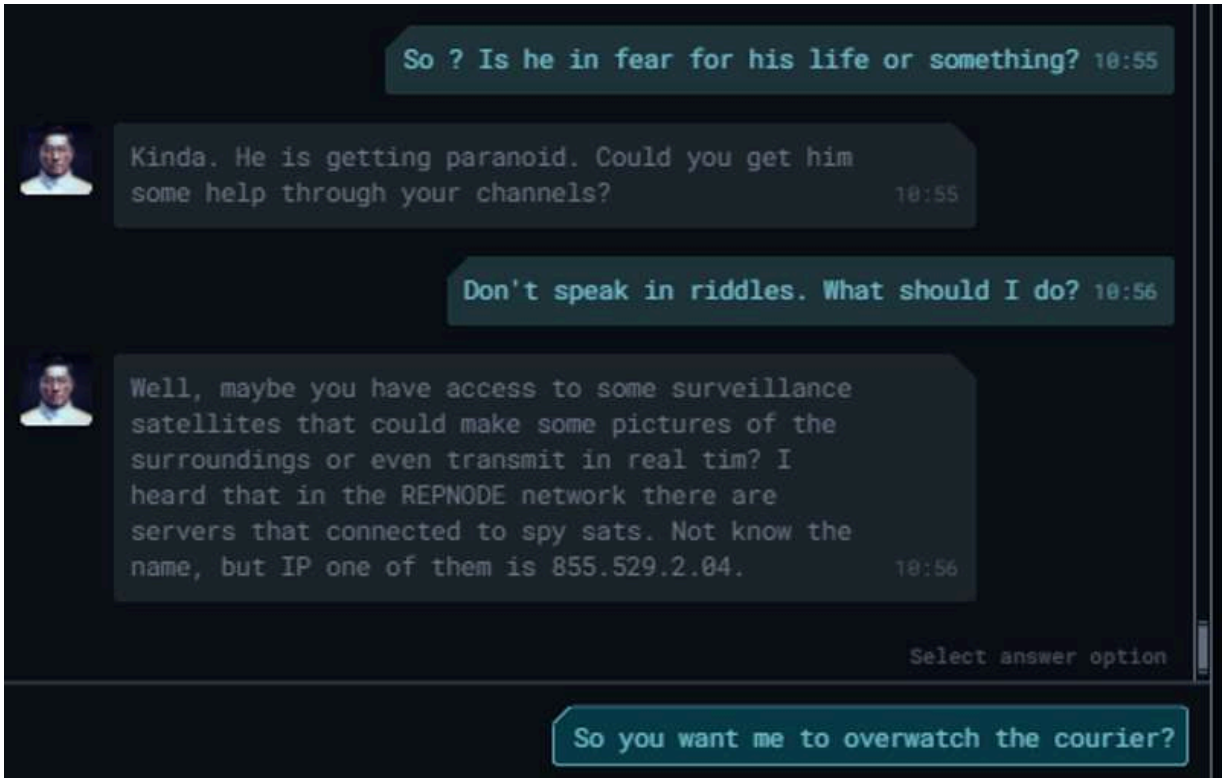

We then have a 3 hour timegate before Chris will message us again. He will provide a file **Staff_agent627_recommendation_letter.txt** and instructions for connecting to **855.529.8.2** which is **RM7-A2ES** and the Freel ID for Natalia Gromova. The ID is unique to each player. You must be connected to the server in order to add the Freel ID via messenger to start the conversation with Natalia.
Connect to the **RM7-W3NCP** server and download the **cedrt-ddab-bckp201751.cr3z** file, decrypt it to gain the CEDRT Expedition Check folder. Make sure you are connected to the **RM7-A2ES** server or you will not receive the dialog option to send Natalia the files. This leaves us at 86% for the August quest and a 5-hour timegate, after which the August quest automatically completes.

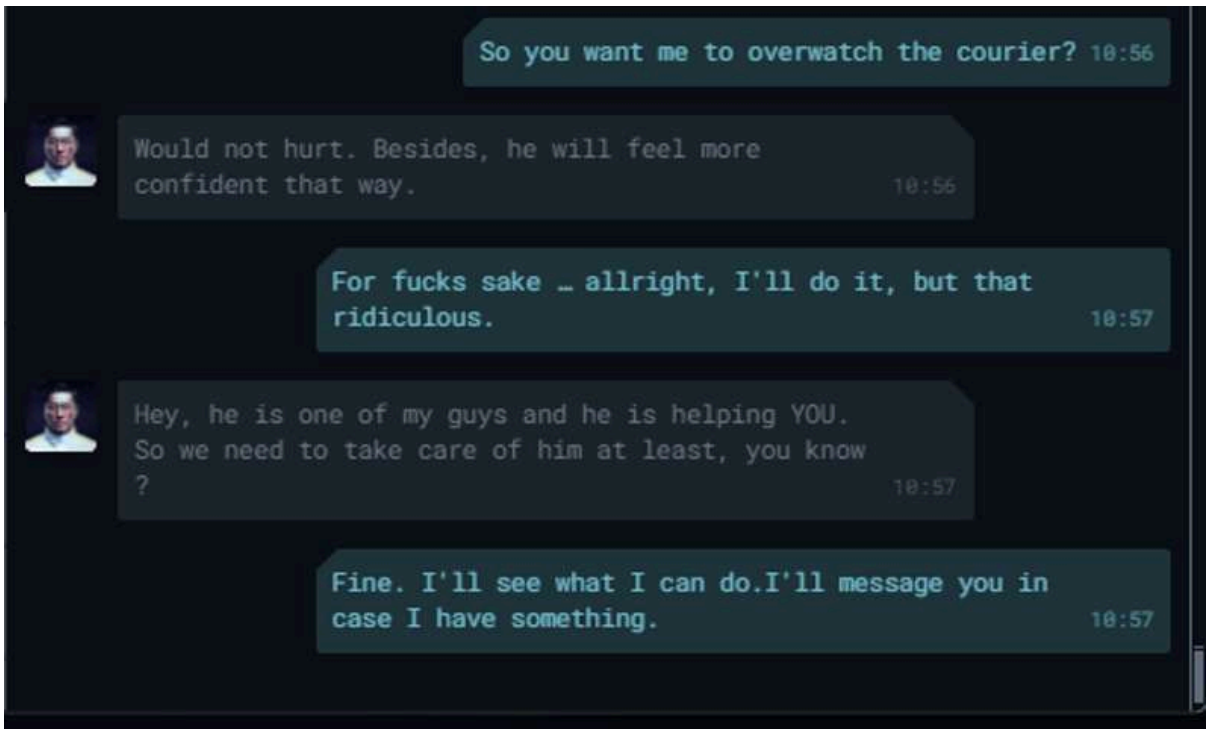

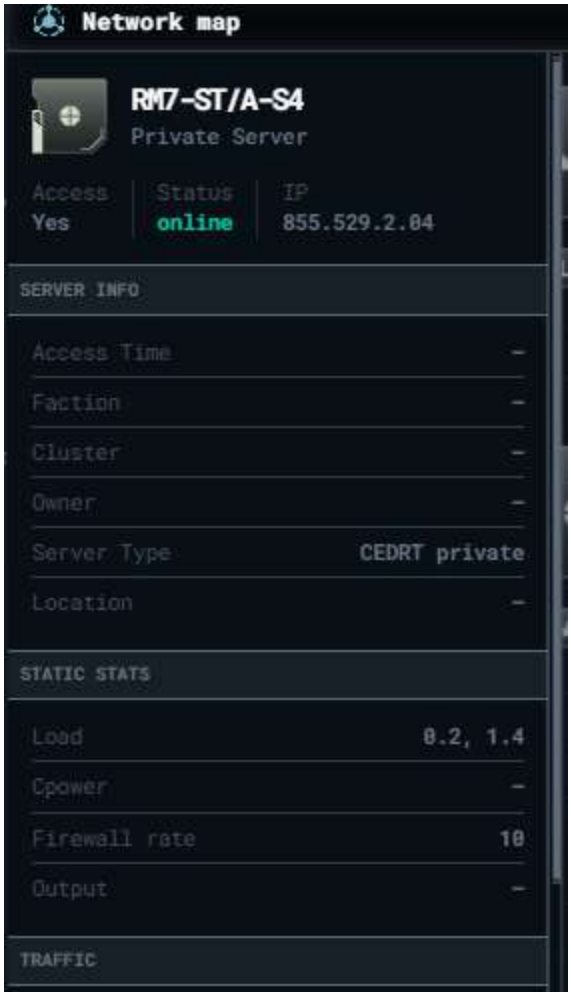

Full chat with Natalia Gromova: https://github.com/3ncy/cor3/tree/main/Messenger/Natalia%20Gromova#august.

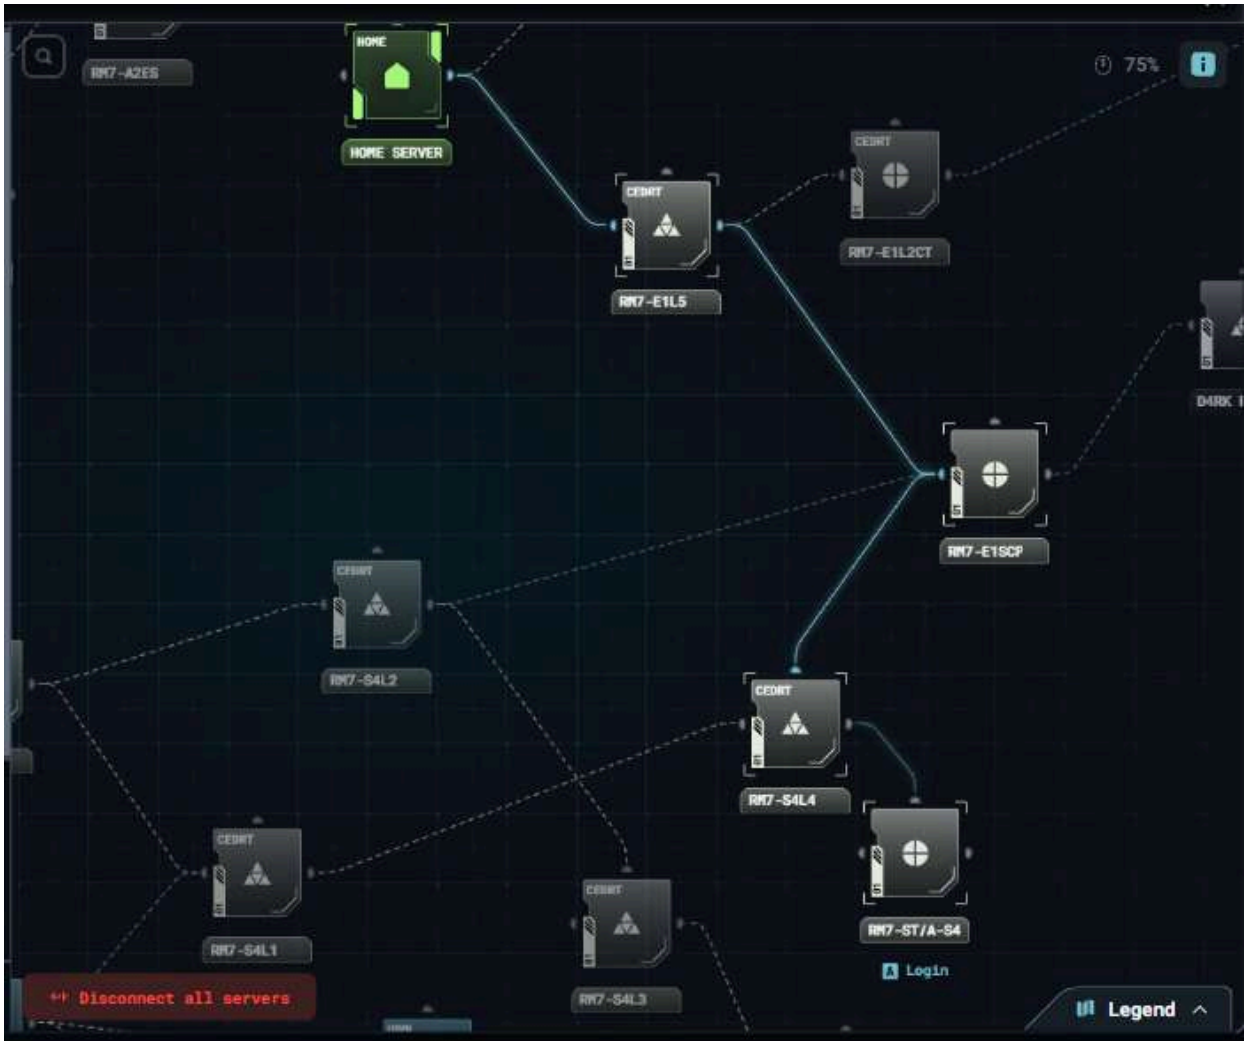

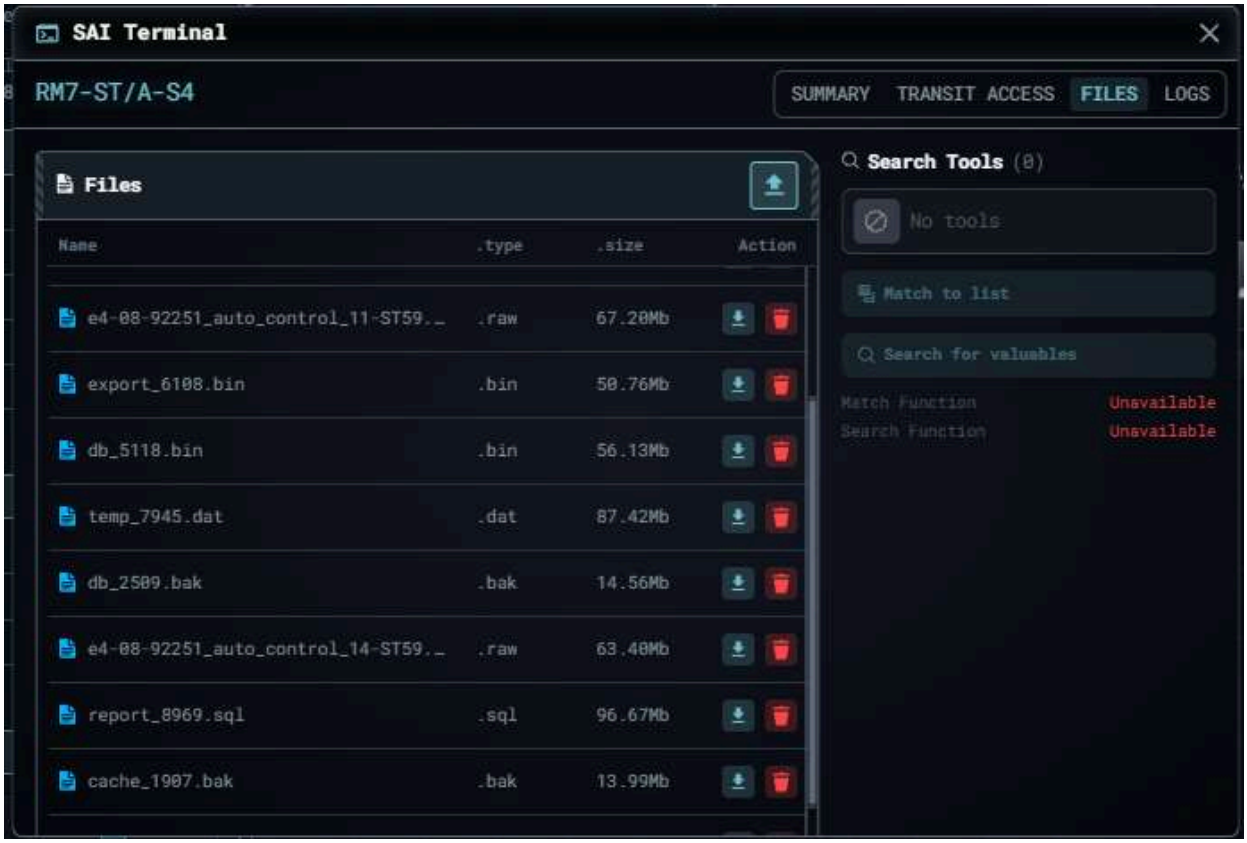

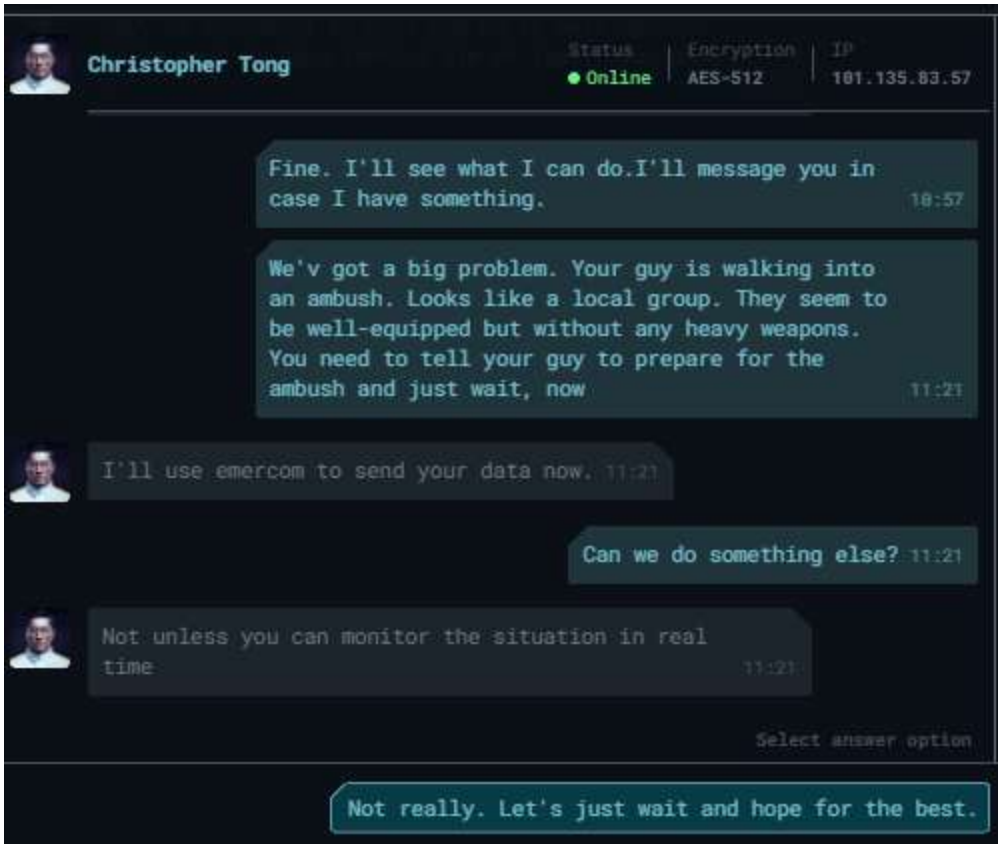

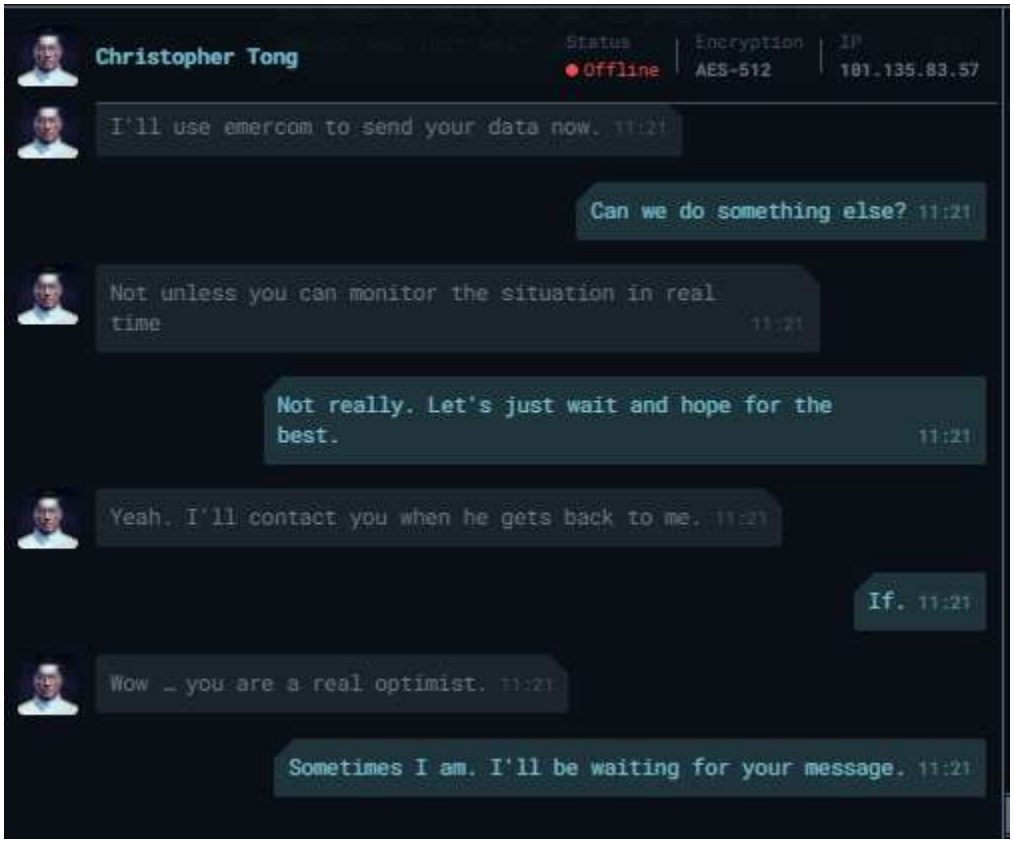

Full chat with Chris Tong:

Theyarenotthere - 7th September

Open the thread to unlock the fragment

September // Burnssy Rain - 8th September

Burnssy Rain

Open the news article to unlock the fragment, **banger** of a track is playable in the article: https://cdn.cor3.gg/corie/news/pale_weather_titan_storm_track.mp3

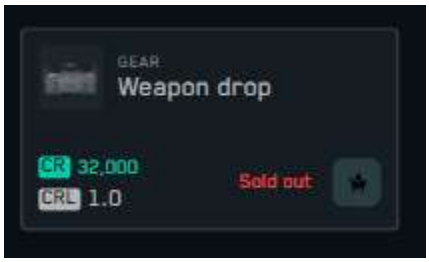

September

10th of September update: Reconnect to **RM7-A2ES** and continue the conversation with Natalia, she will eventually download a photo to your desktop, open it to continue the chat. When the chat completes you can message Chris Tong again.

Finish the conversation then either:

1. Connect to the black market '**D4RK RM7MI**' server to purchase the Weapon Drop from the Market → Gear tab

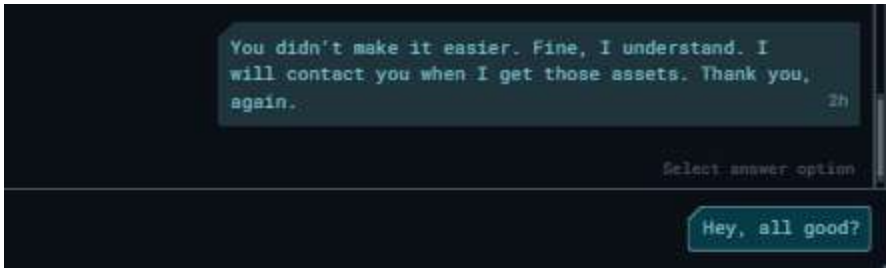

Or

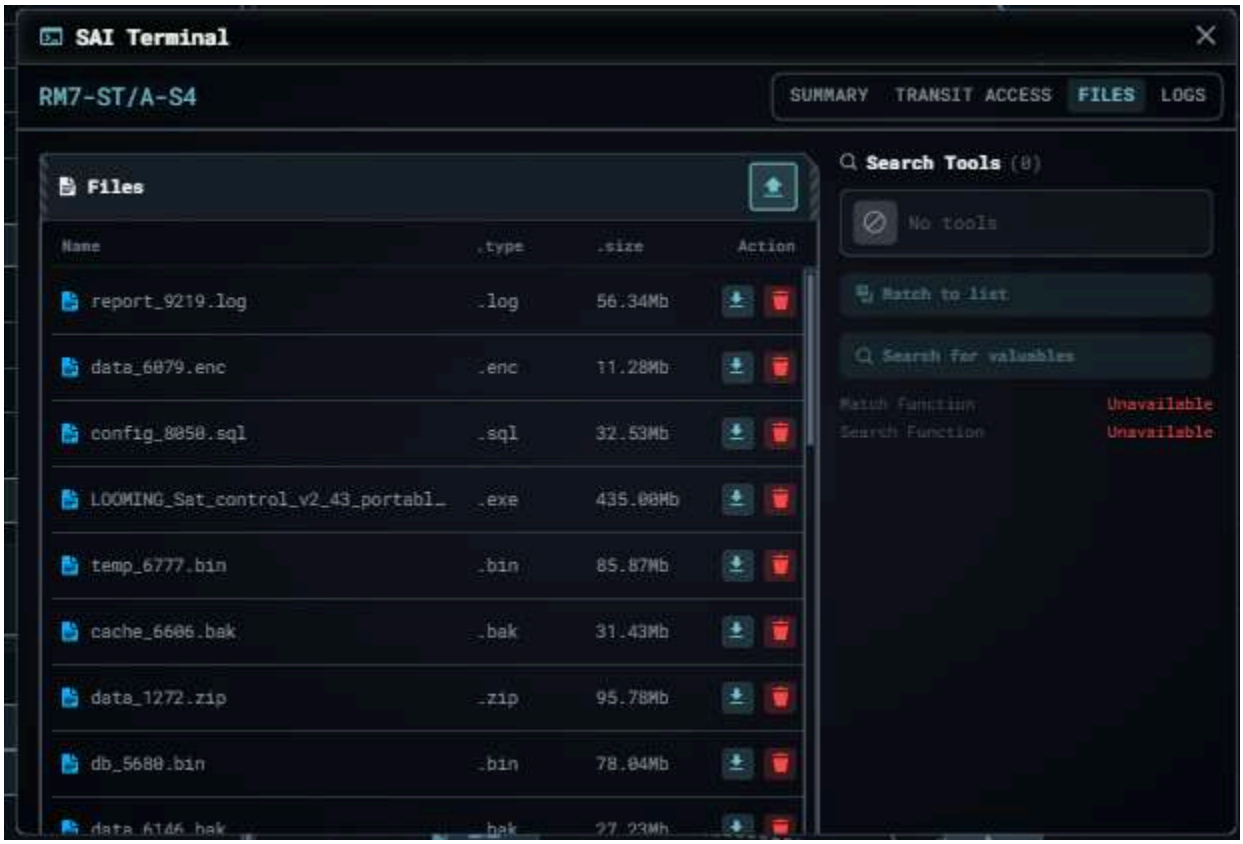

2. Connect once more to **D4RK RM7EG** and message ChuckTheFerry on the D4rkJumpers website, who will trade you the guns for a service of uploading a provided file **data_recover_54124.dat** to **URM7-S5L2**.
   The server can be force Hacked for 1500CR if required.
   Return to Chuck once the file is uploaded.

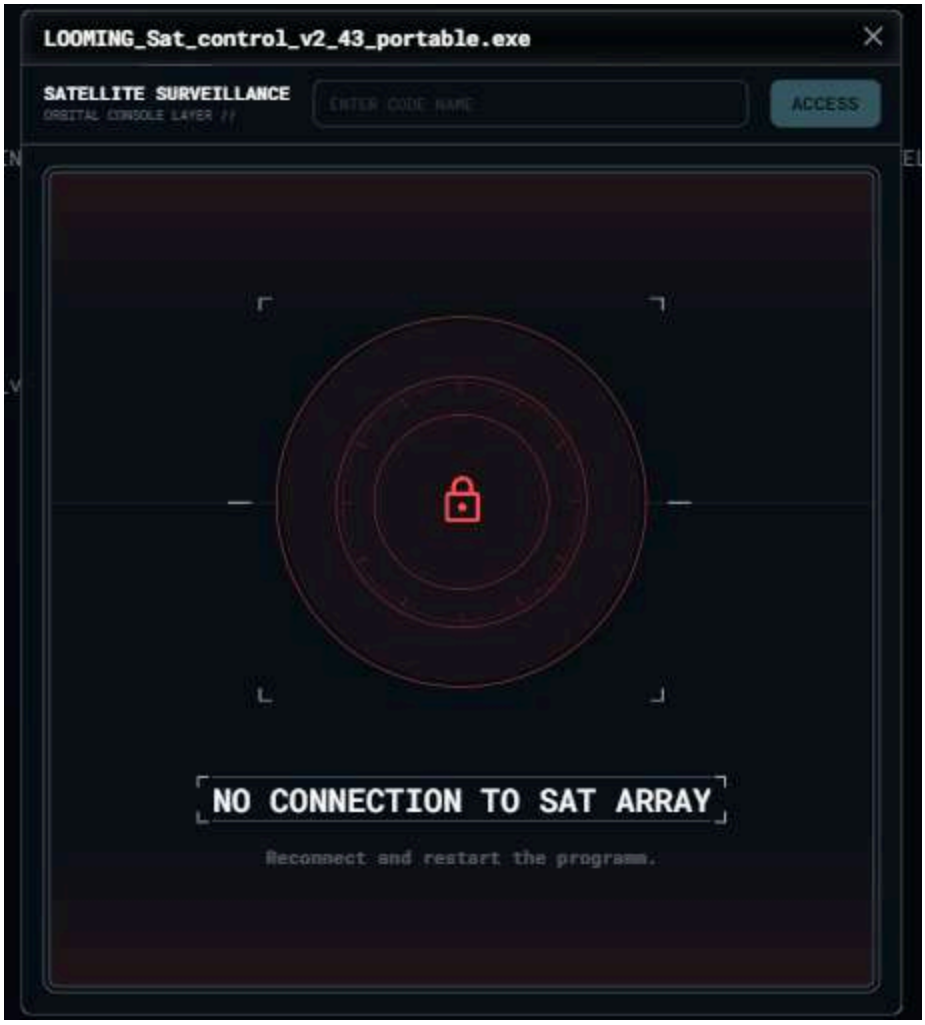

After getting the gear from either source, message Chris Tong again.

Wait 2 hours for a timegate, then connect back to **RM7-A2ES** and let Natalia know. She will provide you with a sat code [**BXC9V0F**], you'll need it. It can be later also found in the Codex.

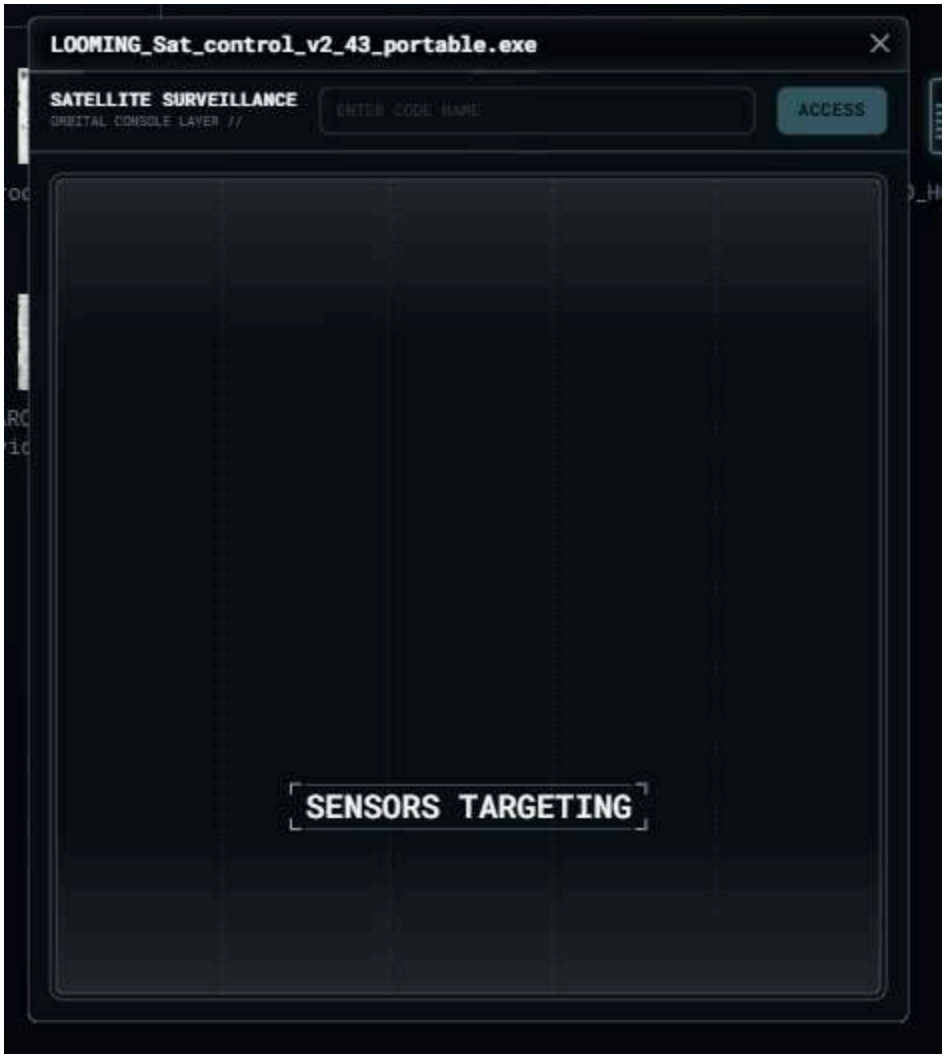

You will then need to connect to **RM7-ST/A-S4** and download the **LOOMING_Sat_control_v2_43_portable.exe** file and, while still connected to **RM7-ST/A-S4** open it. Enter the code **BXC9V0F** at the top and click access. Once it connects and loads the map you need to start marking humans and structures

Analysis

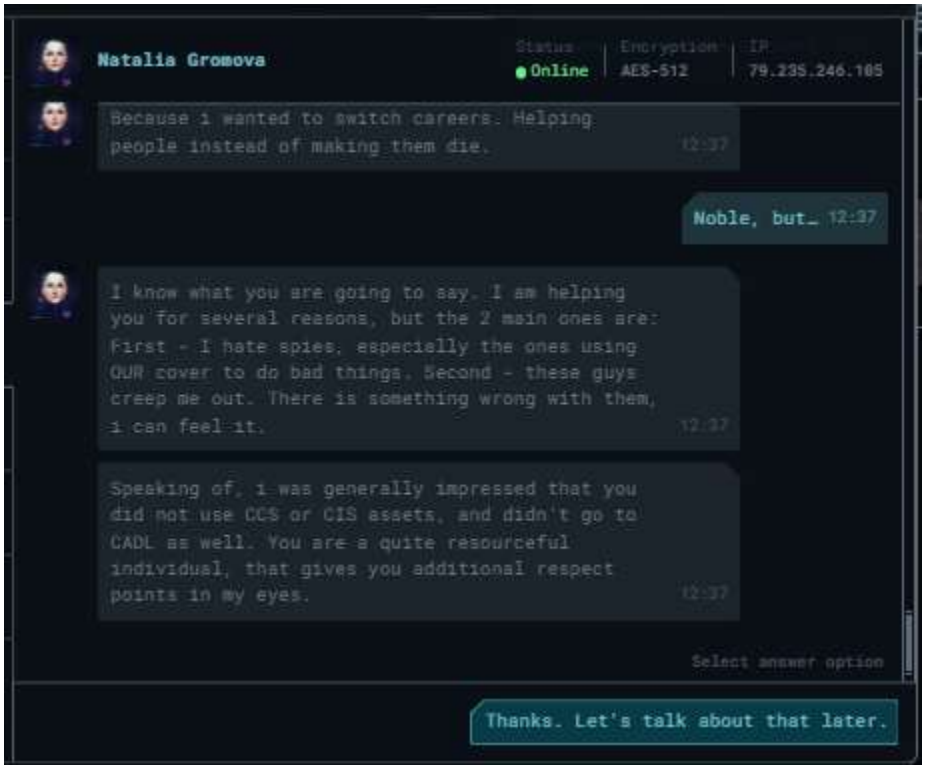

Download the resulting file and talk to Natalia after connecting to **RM7-A2ES** again. Finish the conversation and it appears we have another timegate as we are now at 74% on the September quest.

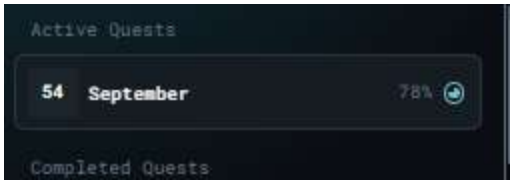

There is a roughly 1-1.5 hour timegate after the above step.

Natalia will reach out again to give you the results of the raid. Connect to **RM7-A2ES** again and finish the chat with her, then talk with Chris Tong. Following the completion of the Chris Tong chat, you will have a 5 hour timegate to autocompletion of the September quest. You should be at 89% when the timegate begins.

[file BXC9V0F_shot0.raw attached] Yes. Here's the area map. As you can see this zone is not lifeless. Anything could happen… 12:37
Yes… dangerous. But, we could use that to our advantage. After all who knows what could happen to a bunch of weird cultists down here… A proper ambush would suffice. 12:37
You are starting to scare me. Who are you? You know a good chunk of field ops tactics, at least. 12:37
You might have guessed already - ex CIS. I have been working with field ops on different tasks. Can't go into details, really, but we did most of it. 12:37
Select answer option
So, why are you here then?

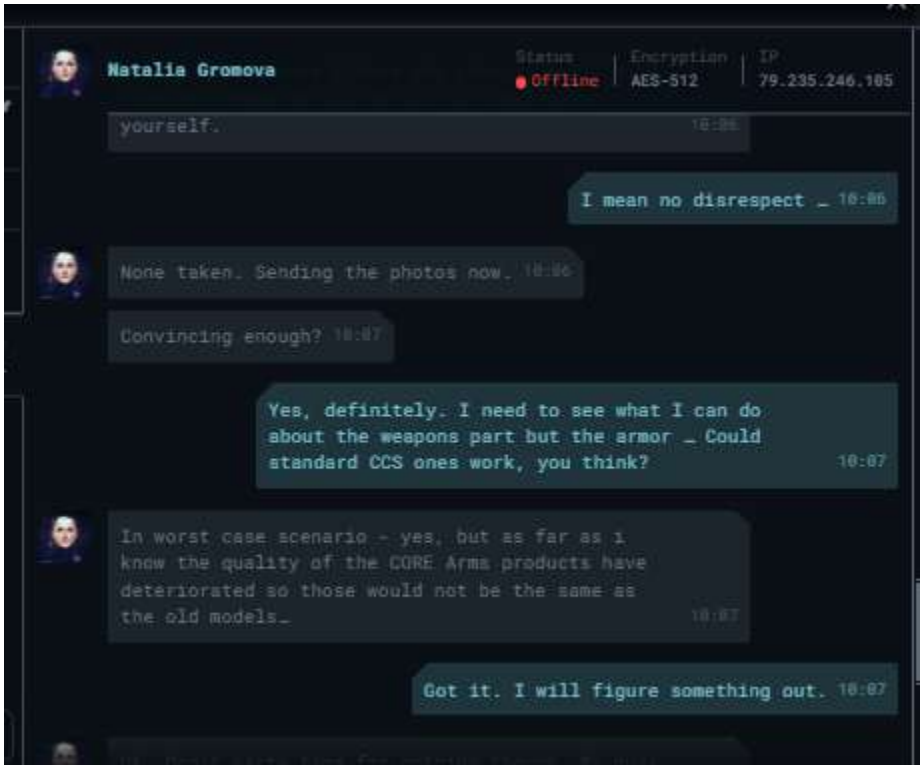

Natalia Gromova
Status

Because i wanted to switch careers. Helping people instead of making them die. 12:37
Noble, but… 12:37
I know what you are going to say. I am helping you for several reasons, but the 2 main ones are: First - I hate spies, especially the ones using OUR cover to do bad things. Second - these guys creep me out. There is something wrong with them, i can feel it. 12:37
Speaking of, i was generally impressed that you did not use CCS or CIS assets, and didn't go to CADL as well. You are a quite resourceful individual, that gives you additional respect points in my eyes. 12:37
Select answer option
Thanks. Let's talk about that later.

like that. To me it sounded just funny, but it seems the local population was touched a bit. 10:06
So, what does that mean for us? 10:06
It means that if you want to catch them alive, for interrogation, we would need several sets of armor and weapons. Including the heavy armor-piercing ammunition most likely. Do you have the means to get that? 10:06
Maybe, but it won't be easy. But are you completely certain that it's really required? Do you have any proof of them having all that equipment you told me about? 10:06
Yes, I am. Because I have the photos. And I will transfer those to you so you can make sure

yourself. 10:06
I mean no disrespect _ 10:06
None taken. Sending the photos now. 10:06
Convincing enough? 10:07
Yes, definitely. I need to see what I can do about the weapons part but the armor _ Could standard CCS ones work, you think? 10:07
In worst case scenario - yes, but as far as i know the quality of the CORE Arms products have deteriorated so those would not be the same as the old models_ 10:07
Got it. I will figure something out. 10:07

Got it. I will figure something out. 10:07
Ok. Don't waste time for nothing though. My guys tell me that those "priests" might leave the area soon and it would be harder to trace them. 10:07
Thank you, appreciated for everything. 10:08
One last thing. This is getting complicated and maybe that is the time someone reasonable would have to stand up and report to CADL or CIS for resources. The only 2 reasons that I am not doing this myself are that I do not want to set up my friends here and that if you do that you'll probably never hear about those cultists again. They would be handled. So it's up to you to decide, actually. 10:08
You didn't make it easier. Fine, I understand. I will contact you when I get those assets. Thank

Even if they have a name - and I'm not sure they do - that knowledge is locked down tight. Whoever pulled this off isn't leaving calling cards.
23h
The one detail that bothers me - why leave the crew alive? It would have been safer to get rid of them. No witnesses. Unless they were so confident the crew has nothing useful for an investigation. Or... they left them alive deliberately. A false trail, something to keep investigators busy while they go dark.
23h
Good questions. But I've got a feeling this time, they're staying with no answers.
23h
Select answer option
Hey Chris. So here's the deal. That group have been found. I can share the photos with you, but you can't see faces on those. This means we need to probably intercept and capture that group. And that requires weapons and armor. Do you think we can get those through official channels?

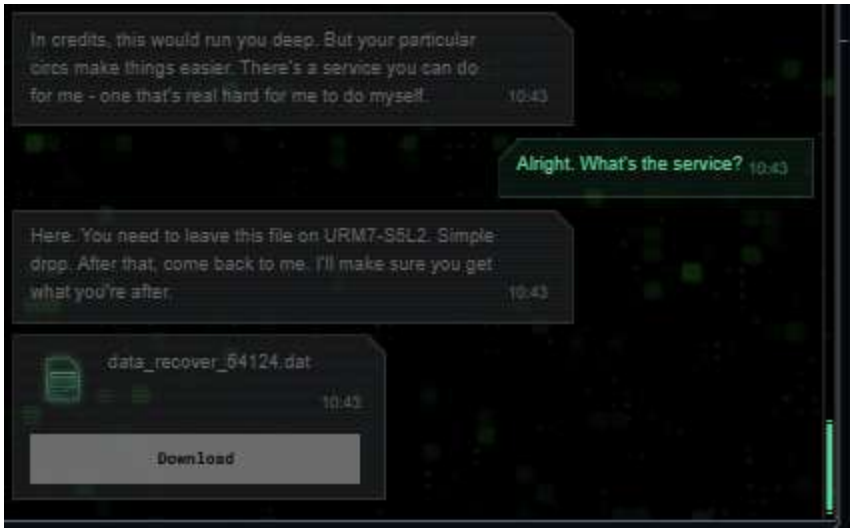

Christopher Tong
Status
Online
Encryption

Oof _ no, I dont think we can. I mean, theoretically we could offer some armor through CCS channels but there's a rumor that every set has a body sensor and some sort of a homing beacon embedded in it, which could be a fatal choice for most operatives.
10:22
That's not good. Any Ideas on how to avoid that?
10:22
Black market. We would likely have to buy weapons there anyway so why not go for the armor as well. Maybe you would even have some friends able to give you a discount?
10:22
You know, its not such a bad Idea, i still have several groups that i could contact _ but let's say those are not "secure" options.

10:23
Nothing is safe nowadays. I'd say go for it. We can't risk neither CADL or CIS additional involvement in the matter anyways. We dont want all that quarantined and some CIS interrogator starting to ask very unpleasant questions_
Okay, fair point. I will look through the market and see what I can find. Maybe ask for favors as well.

10:23
Chris, my package has been received. What about you?
10:24
I have got my hands on a few crates of old CCS riot gear which apparently had body armor as well. I am planning to drop it down VIA a shuttle directly to the camp. Might as well smuggle your weapons in the same ship.
Select answer option
Is it legitimate?

well. I am planning to drop it down VIA a shuttle directly to the camp. Might as well smuggle your weapons in the same ship.
Is it legitimate?
Nope. That shuttle pilot is basically insane. He is muttering some crazy things about being an ex-operative of some sorts but I have not figured it out yet. But still i think he is more then capable of doing what's needed. We can always retort to a "no witness" method, after all _
No, that is not the way. Let him drop all that stuff above the camp. Maybe that would work. No landing = no information on who and why.
Fine, let's do it your way. I hope you know what are you doing.

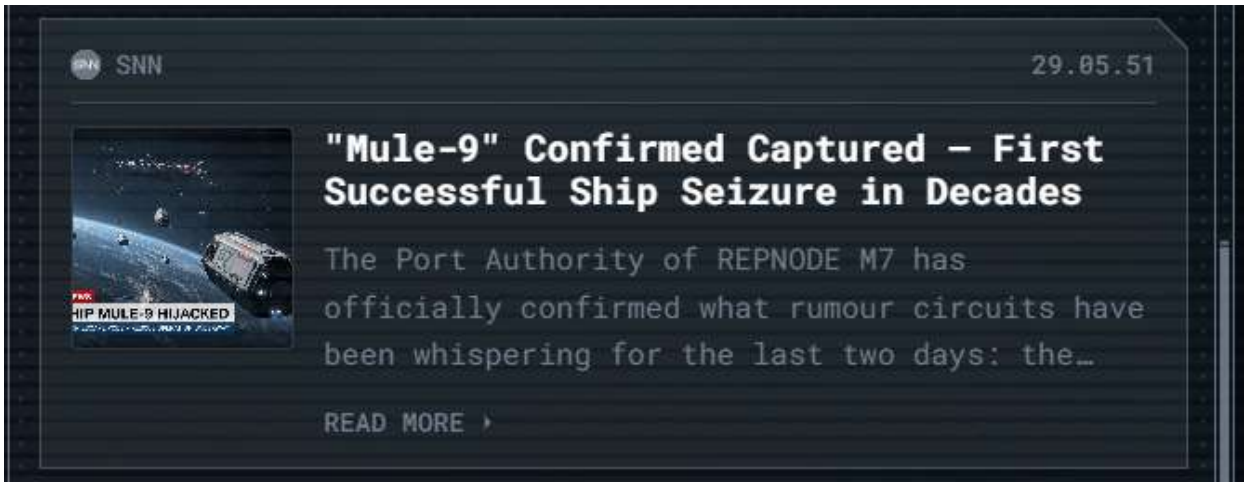

ChuckTheFerry
No.
Hey. Got a side job for you. Need some guns. Real ones.
Real guns? That's a different kind of goods. I don't touch hardware like that - real steel brings real problems. But lucky for you, I've got a guy. Owes me for past "kindness". And the easiest way for him to settle that back? You guessed it - guns.
So if you end up owing me something, you can pass that debt to him, and he pays it with what I need.
Exactly. The cycle of debt. Or the cycle of "kindness" - depends on how you see the world.
And what's this "kindness" going to cost me? Credits?
In credits, this would run you deep. But your particular circs make things easier. There's a service you can do for me - one that's real hard for me to do myself.

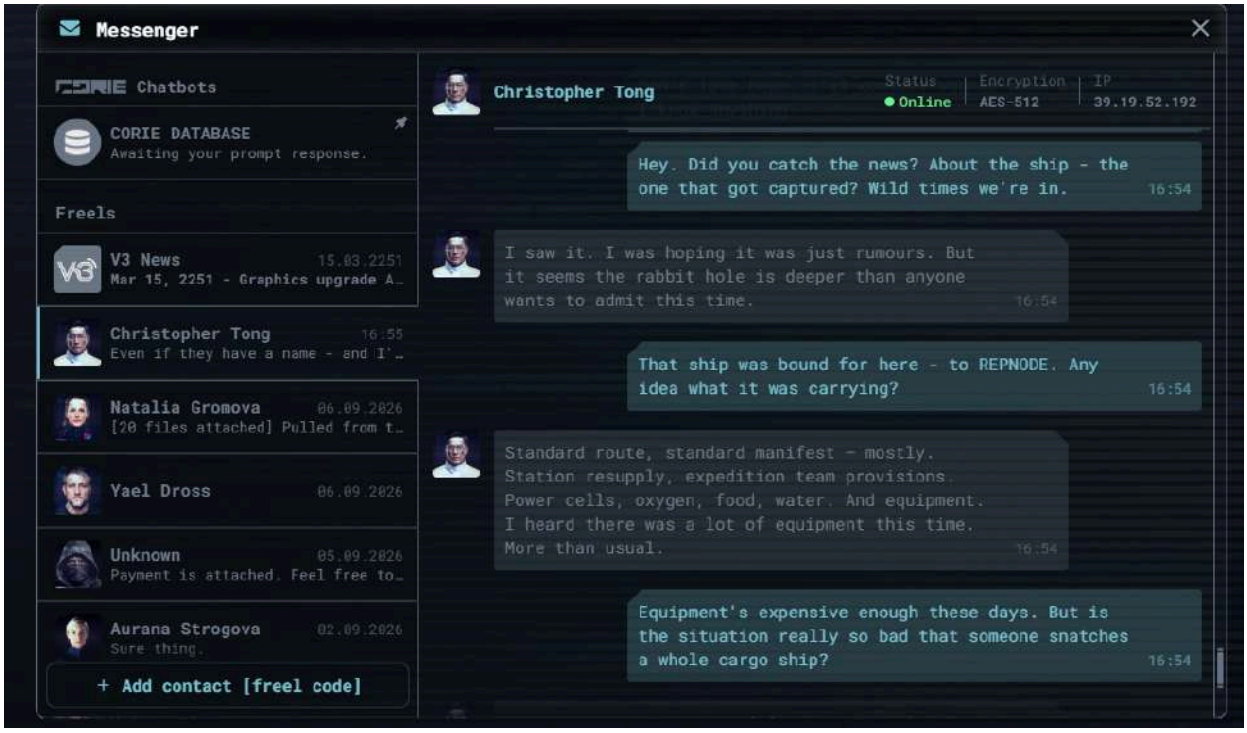

Mule-9 Confirmed Captured - 9th September

Open News Article “Mule-9” **Confirmed Captured - First Successful Ship Seizure in Decades**

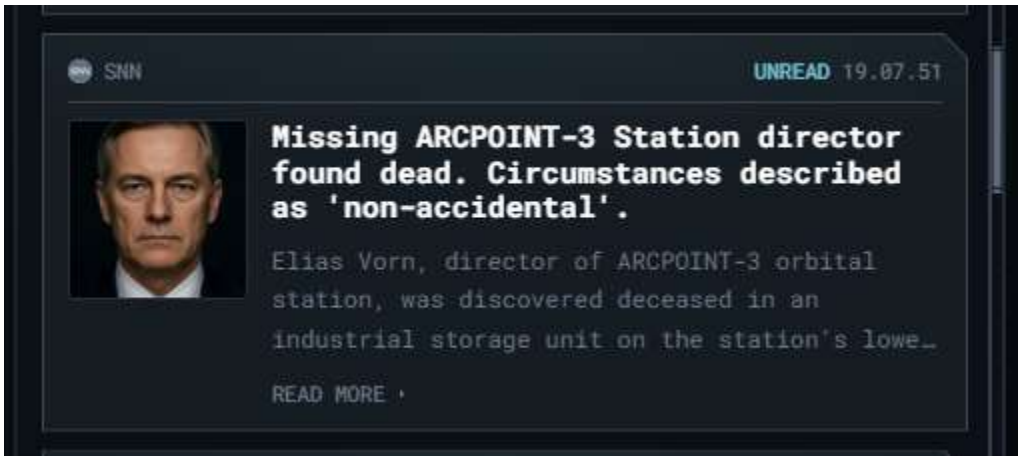

You can now message Christopher Tong in the Messenger. Chat with him to complete the fragment unlock.

October // Found in Acid - 10th September

Found in Acid

Open both the News Article and the Forum Thread to unlock the fragment

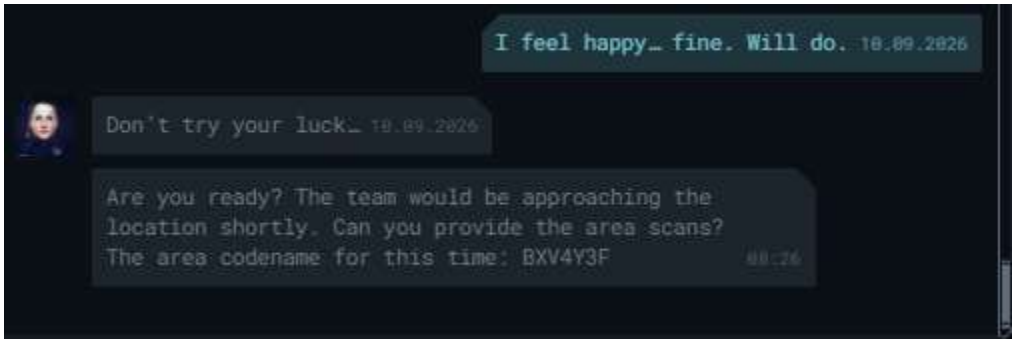

October

This request requires September to be completed before October can be started.

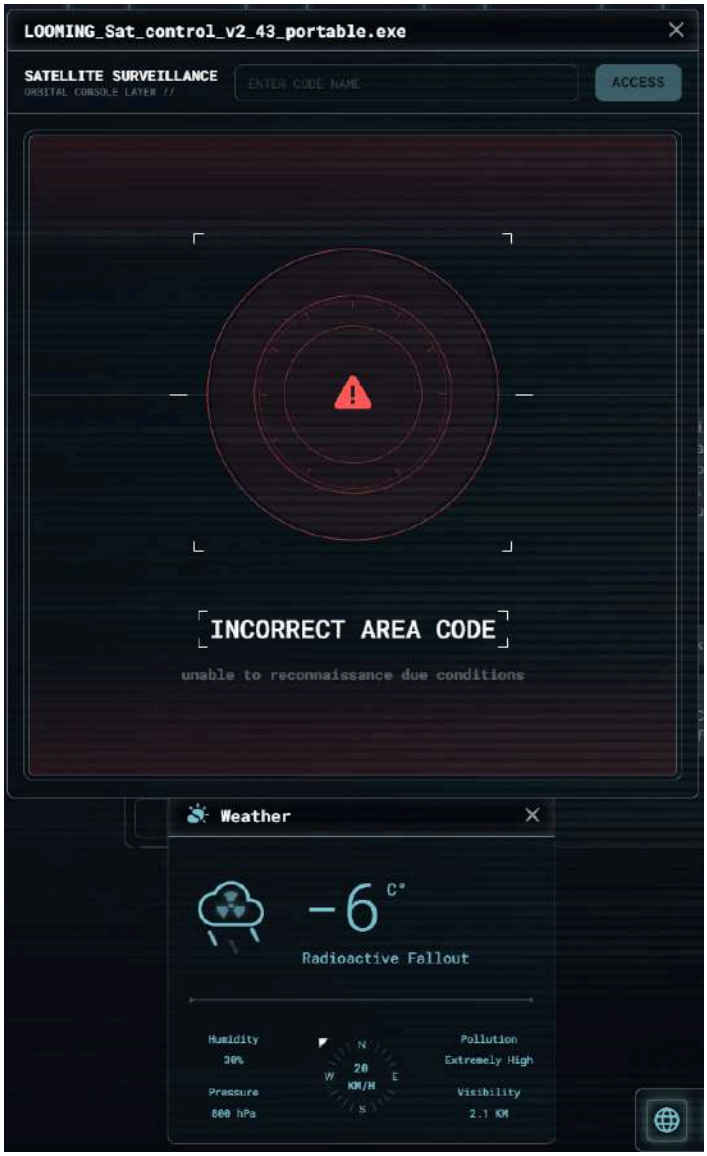

Connect to **RM7-A2ES** again and chat with Natalia. She sends you a new code **BXV4Y3F** - Make sure you reply back to her before continuing. Connect back to the **RM7-ST/A-S4** server and run the **LOOMING_Sat_control_v2_43_portable.exe** file, enter the new code and wait for the satellite to load.
NOTE: Some weather conditions will block the satellite. Just wait a few minutes and it will change. Don't forget the weather app on the toolbar.
Once loaded you should have 4 total areas of interest to click for the Satellite to lock in on before it will allow you to download **BXV4Y3F_shot0.raw**. Once you have that downloaded, open the file, then connect to **RM7-A2ES** again and chat with Natalia. She will provide you an audio file, open it to gain a codex entry, then continue the chat with Natalia.
She will provide you with **crates_markings.jpg**, **camp_exterior.jpg** and **cave_interiro.jpg**, be sure to open all three files to trigger dialog with Aurana Strogova. Finish the chat with Aurana, then message Chris Tong and finish his conversation.

You will be messaged by Cody Rennick who needs you to do 3 market jobs before you can message him. Do the jobs to have Cody unlocked. Then connect to **RM7-E1SCP** and download **TRANSIT_BATCH_LOG_TRB-2231-0447** and open the file. While still connected to the **RM7-E1SCP** open your browser and go to the Trade & Shipment Database where you should now see the **Table View** tab where you enter the Transit Manifest ID **TRB-2231-0447** from the file and click “Load”. Once the table generates, check the boxes at the [**REDACTED**] entries (make sure you get all of them, there should be 6 selected) and only then can you click “Export” and get an output file **vessel_export.dat**. After opening the file you will be able to message James Curtis Fung with a request for help. From here we are at 88% on the October quest and timegated.

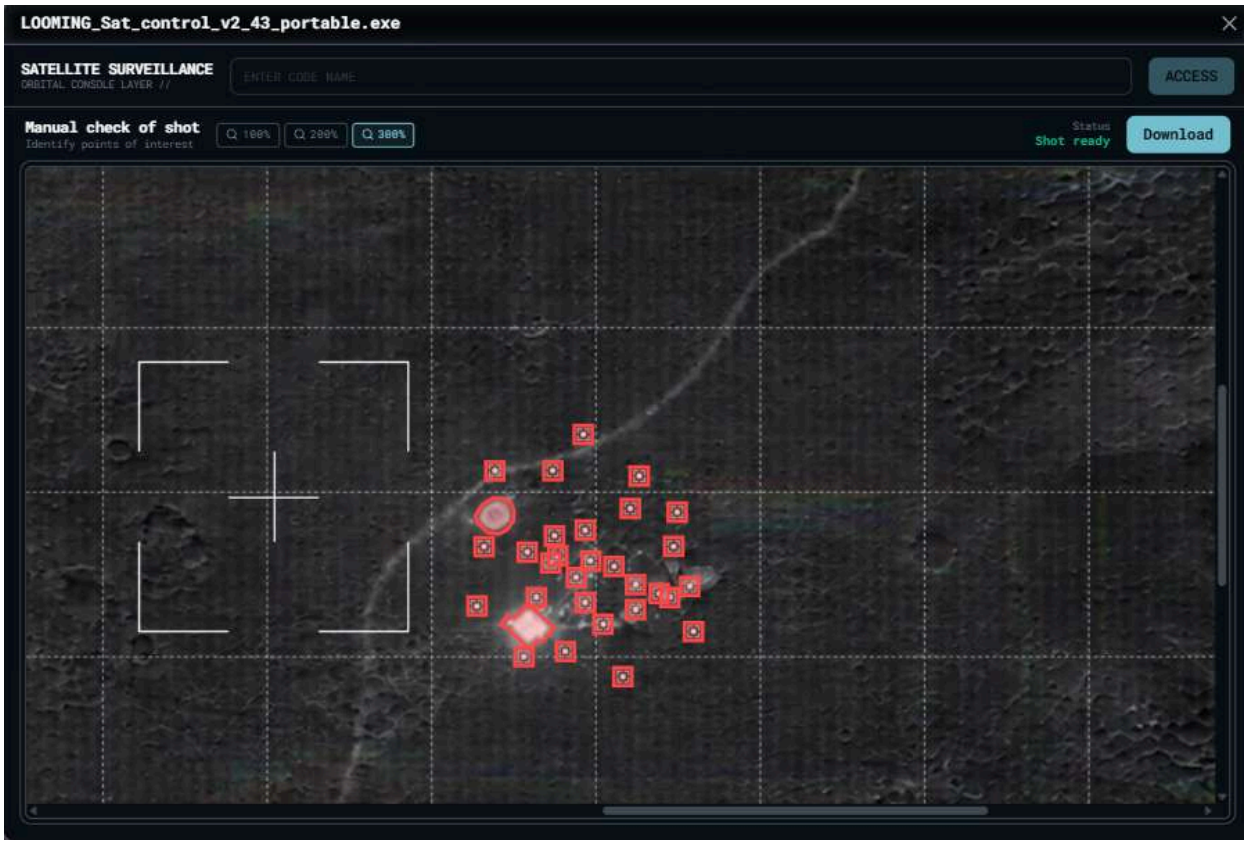

Follows a 5-hour and 1-minute timegate for auto-completion of the October quest and unlock of the fragment.

Notes on cognitive development. Mostly orbital populations.

Posts About

POST 3 OF 3 · /POSTS/ORBITAL-COHORT-STUDY-3

Do orbital children know what a plant looks like? We tested 340 kids. The results were uncomfortable.

Dr. Sera Malk – Cognitive Development, Orbital Populations · 06/2251

This is the third post in my ongoing series on cognitive development in children raised on orbital stations. If you want the methodology, start with post one. This one is about the finding that I've been sitting with for three months and wasn't sure how to write about.

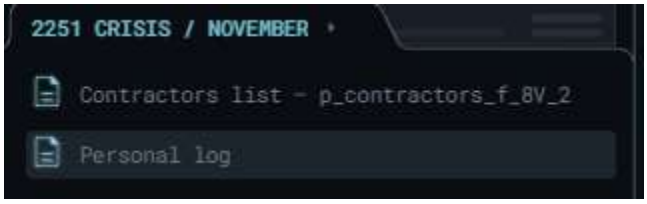

THE STUDY

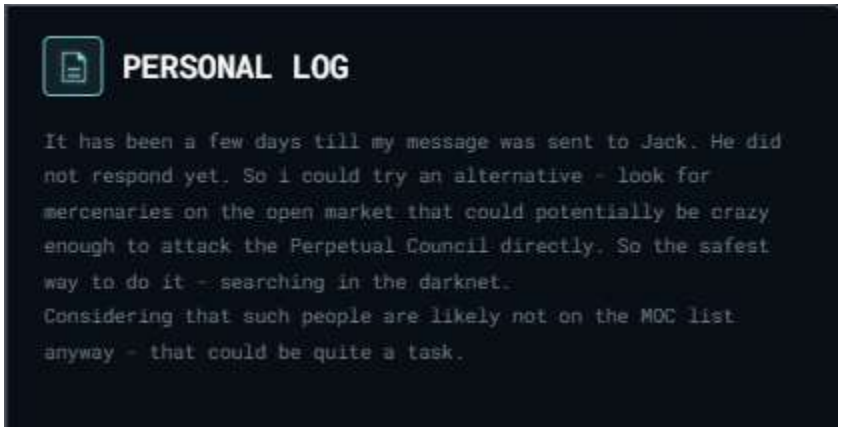

We tested 340 children aged 6–14 across four orbital stations. The task was simple: we showed them images — some real photographs of plants, some high-quality VR renders from standard educational environments — and asked them to identify which was which, and to name the plant if they could.

For children who had spent their entire lives on-station (our 'station-born' cohort, about 60% of participants), the results were consistent across all four

In the Network map search for **855.529.0.31** and **855.529.0.41**, make sure you actually press ENTER after searching. Unlocking both of these servers, **RM7-PCC1** and **RM7-PCL1**, on the map will trigger the next message from James.

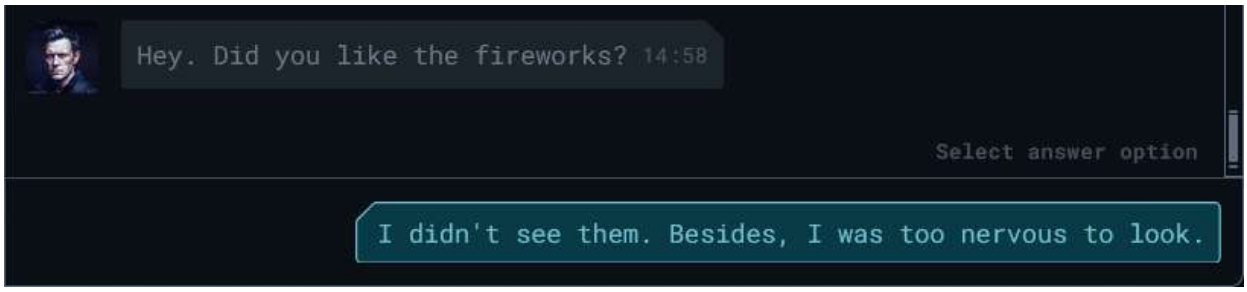

Continue the conversation with James, then wait until the red security overlay appears.

Go through the conversation in the security window, it will automatically close after the last message. Then reach out to James again. Once the conversation is done, you should be at 68% for the November quest.

7 hours after finishing with James, a news article is pushed out about the Deimos facility disaster. (That is where the overseer James was going to kidnap was located.) Opening the article places us at 79% for the November quest.
James will message us 30 minutes after reading the article.

Finishing the conversation updates the codex and puts us at 89% quest completion. The fragment is granted after a 6-hour timegate.

SNN NEWS - DEIMOS FACILITY DISASTER

SNN 15.11.51

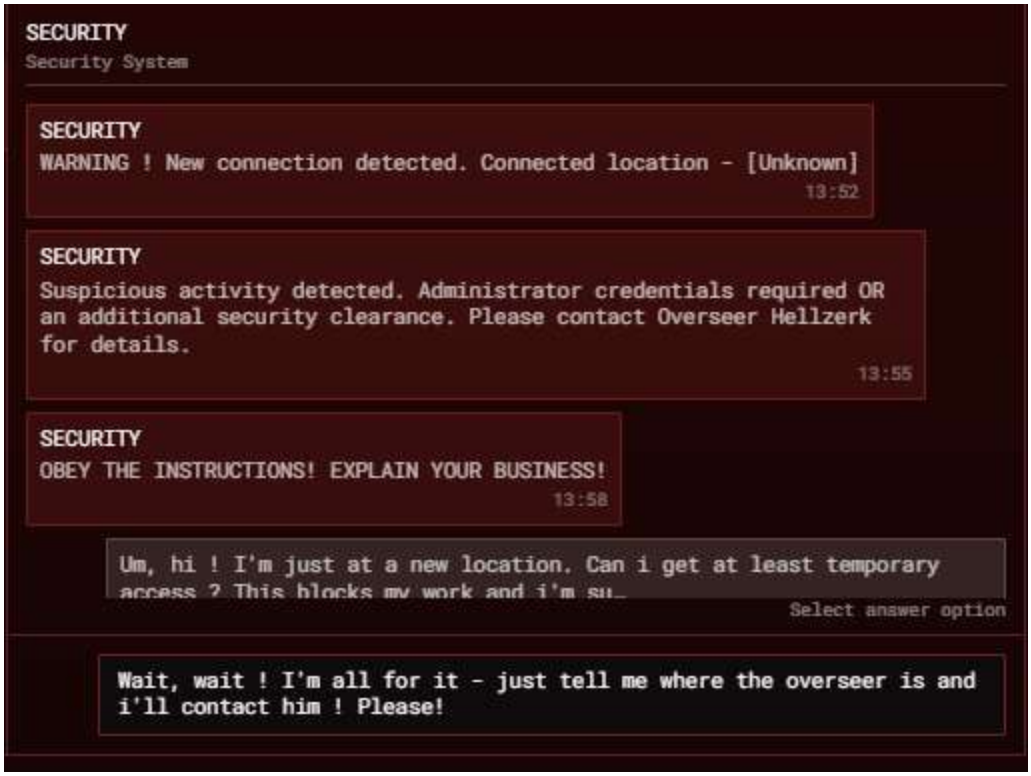

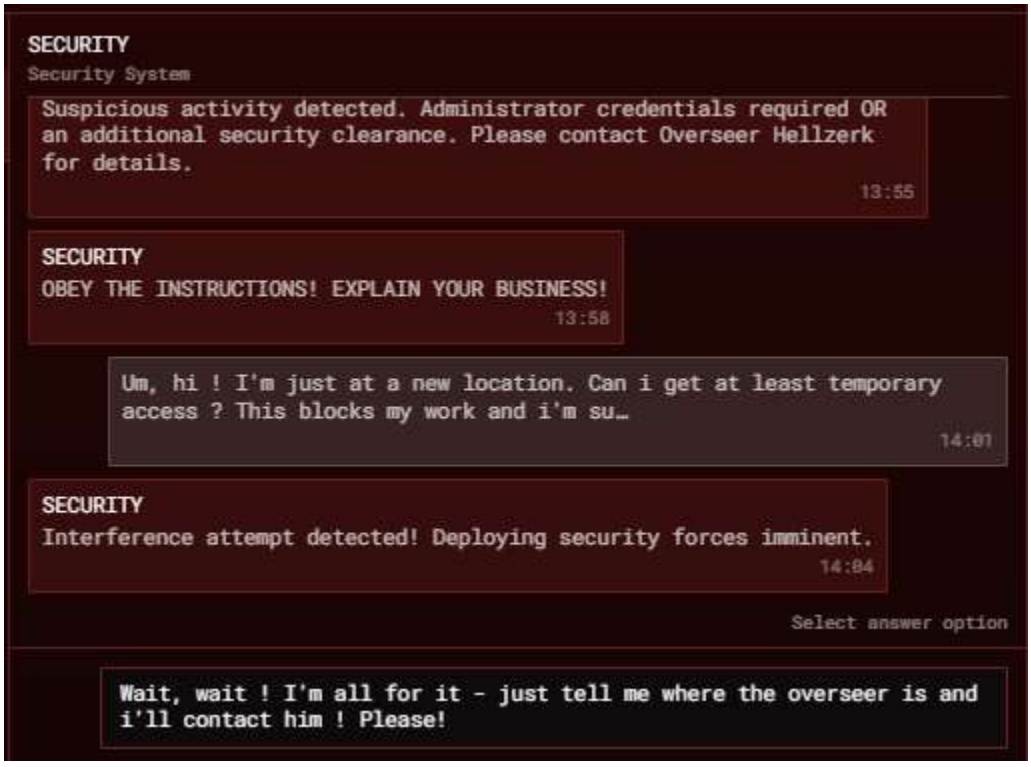

A large explosion has just happened on the territory of the Deimos scrap facility 19!

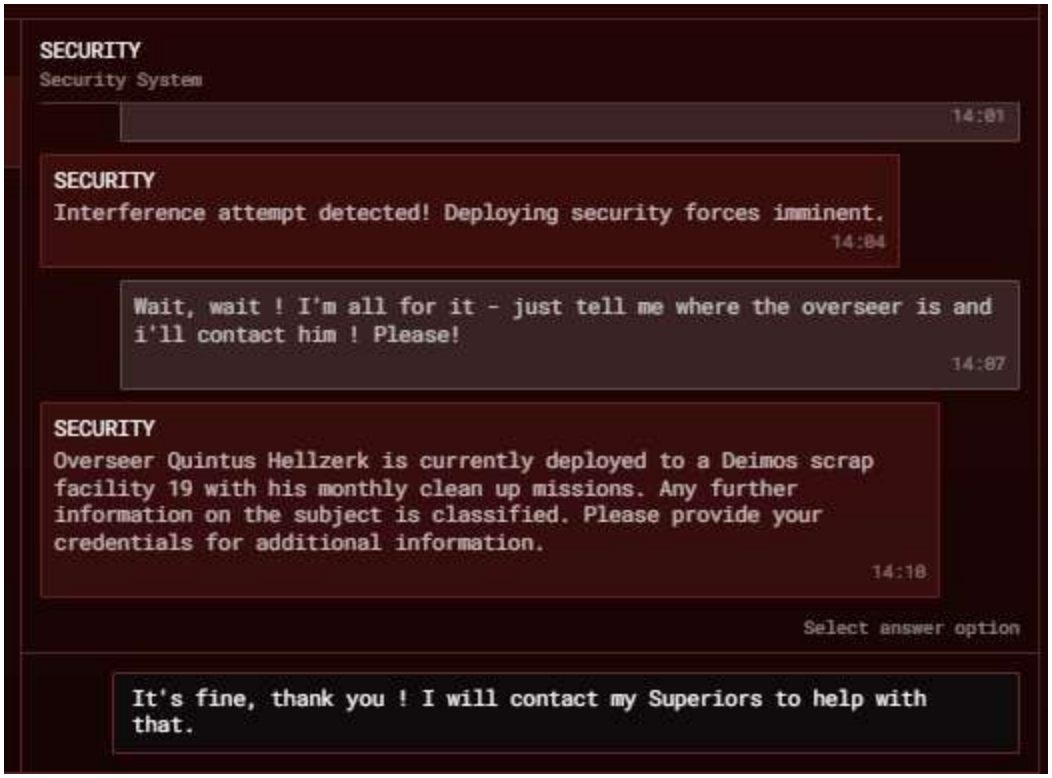

Presumably, a high ranking official delegation has been reviewing the facility's estimates when the ammunition has exploded. The witnesses claim there could be no survivors. The unofficial version is an accidental weapon discharge that led to a chain reaction somehow.

Official statements are yet to come but many view and connect this with a "special treatment" that the review board has been giving all facilities around Mars.

The chat in the security overlay:

Good afternoon.
I see you found me through the registry.
That is usually how it happens. Someone mentions my name somewhere.
What can I do for you?
16:22
Select answer option
I read about you on the forum. I wanted to know more about what you sell.

my name somewhere.
What can I do for you?
11:18
I read about you on the forum. I wanted to know more about what you sell.
11:18
I see.
A lot of people have written lately. More since SNN published that article.
I sell things my parents brought with them when they left Earth in 2191.
My mother brought soil from her garden, a few stones from the shore, and water in an old thermos. My father took sand from the road outside their house.
I divide what can be divided and sell only a little at a time.
11:18
Select answer option
Did you ever see Earth yourself?

little at a time.
11:18
Did you ever see Earth yourself? 11:18
No.
I was twenty-three when they left, but I had already been living on this station for years. I was born here.
My mother described the garden so often that I can still picture it. Three fruit trees. A crooked fence. Yellow flowers that grew where nobody planted them.
I know all of that because she told me. Not because I saw it.
11:18
Why did you start selling the things they brought?
11:18

Why did you start selling the things they brought? 11:18
For a long time, I did not.
They stayed in a cabinet for almost sixty years.
Sometimes I would open the door just to make sure they were still there.
Then my daughter started having money problems.
She did not ask me for anything. She is proud in exactly the way her mother was.
I had a small pension and a cabinet full of things I was saving for no clear reason.
So I sold one vial. 11:18
Was it difficult? 11:19
The first one took me nearly an hour.
I poured the soil into the vial. Then I poured it
Select answer option
Why sell any of it, then?

Was it difficult? 11:19
The first one took me nearly an hour.
I poured the soil into the vial. Then I poured it back. Then I tried again.
It felt ridiculous. I have never stood in that garden. The soil was not part of my childhood.
But when I opened the jar, the cabinet smelled like my mother's clothes. She kept it beside them for years.
I knew that one day the jar would be empty, and I was afraid the smell would disappear with it. 11:19
Why sell any of it, then? 11:19
Because my mother did not carry it here so it could sit behind a closed door forever.
She brought it because she was frightened she
Select answer option
Are you certain it is real? That none of it was replaced?

Because my mother did not carry it here so it could sit behind a closed door forever.
She brought it because she was frightened she would forget.
She remembered. I remembered through her.
Now somebody else keeps one of those vials on a shelf. Perhaps they look at it in the morning.
Perhaps they tell a child where it is supposed to have come from.
I think that may be better than a full jar nobody is allowed to touch.
11:19
Are you certain it is real? That none of it was replaced?
11:19
I am certain my mother packed it on Earth.
I watched her over a video call. She showed me the garden soil, the thermos, and each stone
Select answer option
What do you still have?

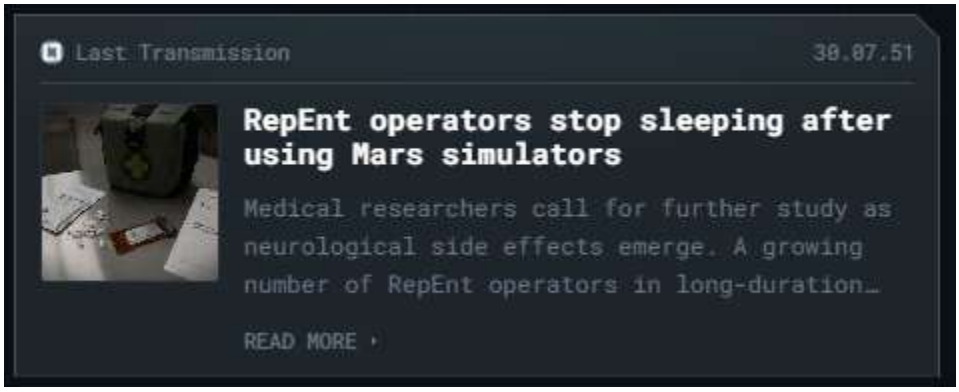

Theo Marn
Status

replaced?
11:19
I am certain my mother packed it on Earth.
I watched her over a video call. She showed me the garden soil, the thermos, and each stone before sealing the cases.
But I cannot prove that to you. I have no laboratory certificate. No official chain of custody. Only my memory, and the memory of a woman who has been dead for thirty-two years.
If you need a guarantee, I am the wrong seller.
Other people will give you papers.
I can only tell you what I saw.
11:19
What do you still have? 11:19
Seven vials of garden soil. Eleven ampoules of water. Nine stones.
The road sand is gone.
Select answer option
Why that one?

Seven vials of garden soil. Eleven ampoules of water. Nine stones.
The road sand is gone.
And there is one stone I do not sell. 11:19
Why that one? 11:20
My mother kept it in her coat pocket during the entire journey.
After the ship docked, she called me. She looked exhausted. Her hands were shaking.
Then she opened her palm and said, 'See? I brought the ground with me.'
I laughed. I told her it was just a stone.
She died years later, and that is still the answer I remember giving her. 11:20
Select answer option
You wish you had said something else.

answer I remember giving her. 11:20
You wish you had said something else. 11:20
Yes.
I wish I had told her I understood.
I did not understand then. I do now.
That stone was the last thing she held while she was still there. Everything else was already packed away.
So it stays with me. 11:20
Thank you for telling me. 11:20
Thank you for asking about it.
Most messages begin with, 'How much for a vial?'
I understand. I am selling things, after all.
But it is good to remember that they were something before they had a price.
Take care. 11:20

RepEnt do not sleep - 15th September

Open the article to unlock the fragment

10 Sect of the Sun - 16th September

Open news article ‘Seven detained in raid linked to Children of Undying Light’

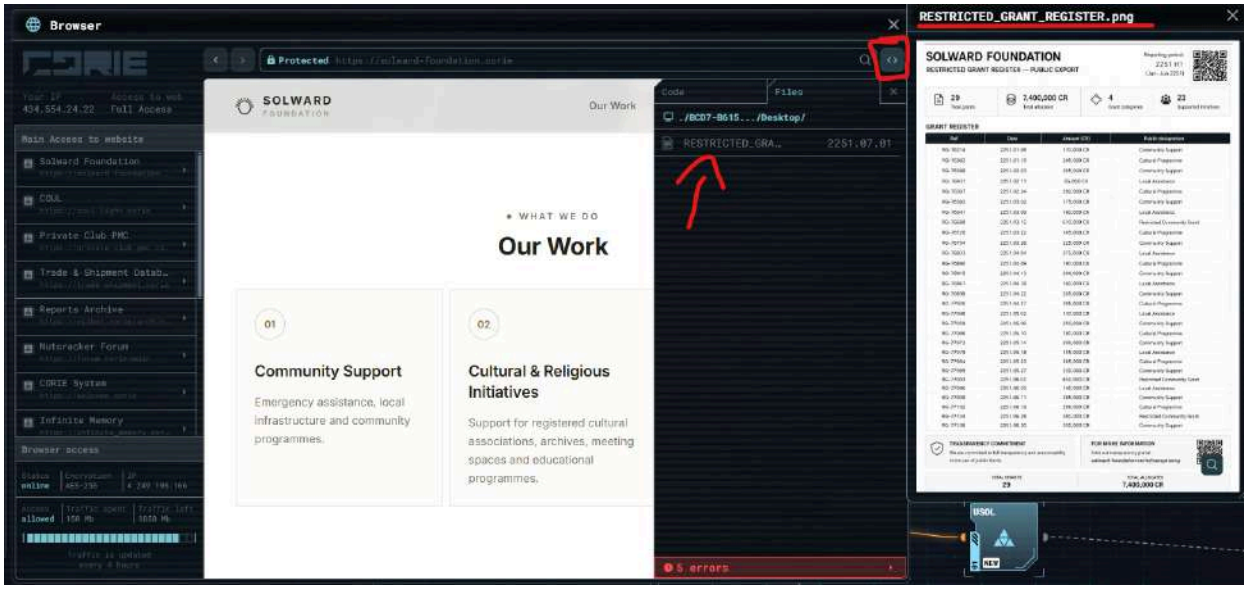

Follow the corie link to **coul.light.corie** in the article and click “Begin Reading” on the homepage.

Connect to **RM7-S4L1** (855.529.2.1), download and open the 3 files
FACILITY_RECON_REPORT.doc
FUNDING_CHAIN.doc
LIGHT_OP_DIRECTIVE.doc

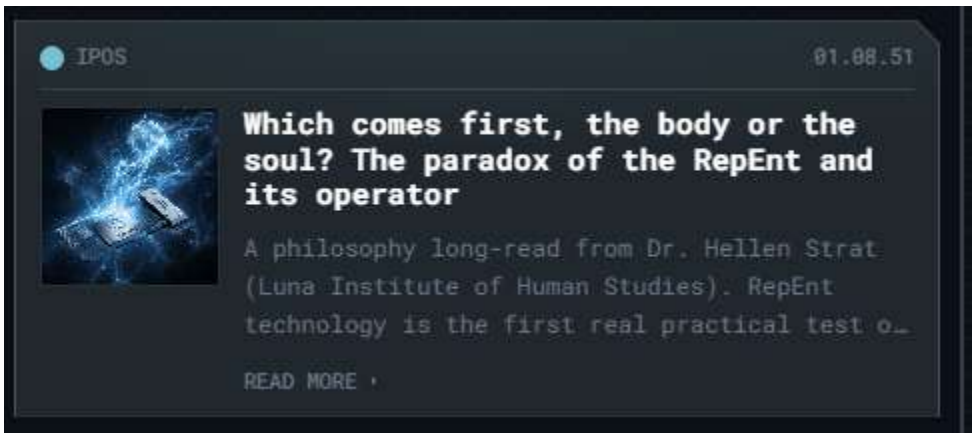

Open corie site **https://solward-foundation.corie**

Open the files side tab and download **RESTRICTED_GRANT_REGISTER.png**.

The fragment is granted after reading the file.

Where does the Self end? - 17th September

Open the article and you will unlock the fragment, completing this quest.

Aliens on Mars - 18th September

Open the forum thread to unlock the last B-series fragment

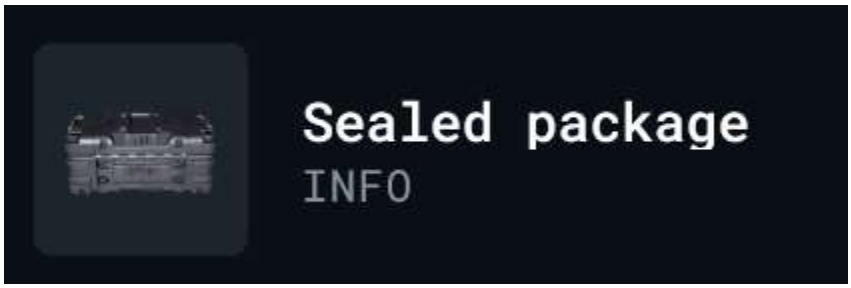

December - 18th September

This is a very long winded post compared to our other ones, so please pay attention and read along once first to understand then attempt it.

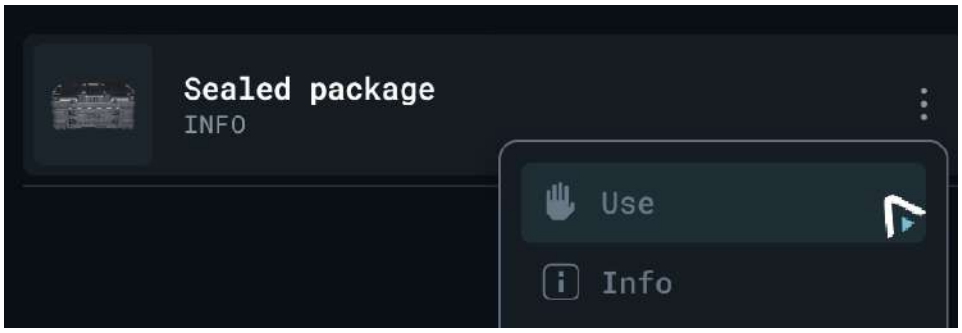

Video - https://youtu.be/OH41aZ5vS8E

You *must* have completed all prior event quests to get to this point.

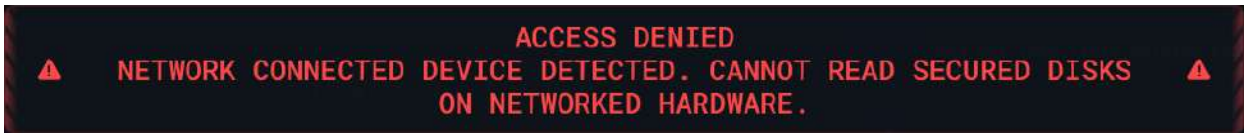

Open your Expeditions window, in your inventory sort by “Recently added”. You should see a “Sealed package” item.

If you hover over it, the 3-dot kebab menu has a new “Use” option. Click it.

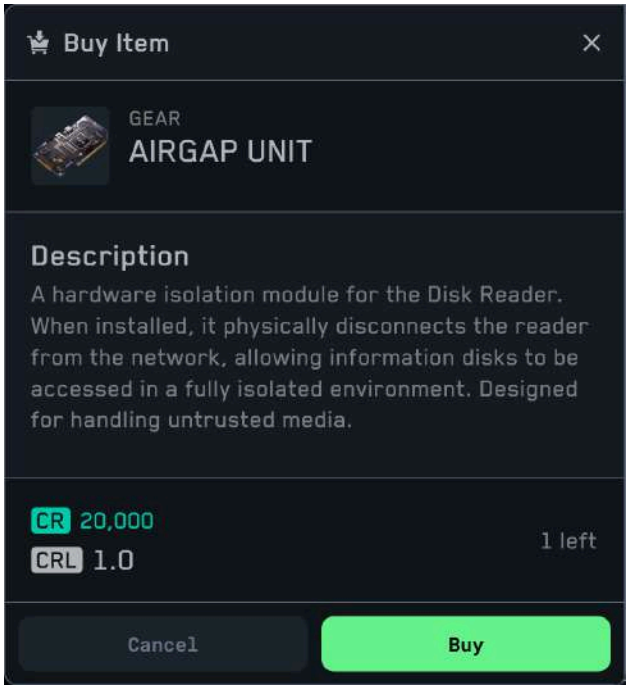

You will get an error message and receive the first Codex entry for this quest.

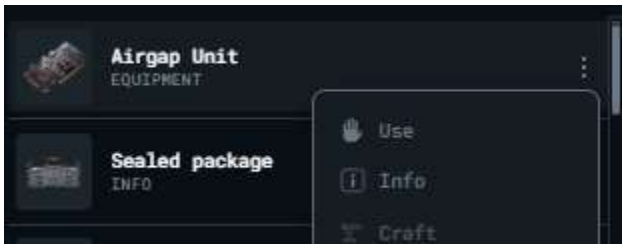

Read the Codex entry “Personal log” under “2251 Crisis / December”. Then go to the Network map, go to the **D4RK RM7MI** server, open its market and buy the “Airgap Unit” from the gear section for 20k credits.

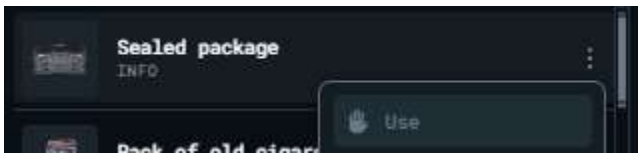

Go back to your Expeditions menu and you should see the Airgap Unit in your inventory. Click the 3 dots on it and click “Use”.
You *will* be forcefully refreshed and see a new file **manual.txt** on your desktop, be sure to open it. Open Expeditions again and you can now click “Use” on the Sealed package in your inventory. Doing so will automatically open the MR-7 Media Reader 78x app and you should now see 3 new DOUBLE-R disks.

You only need to repair one of the disks to unlock all 3 of them.
[Continue reading below the screenshots.]

MR-7 Media Reader 78x
COR3 TECH
Data Reader
Device Status
READY
DOUBLE-R – MA_
DOUBLE-R – CO_
DOUBLE-R – RE_
INSERT DISK TO READ
THE DATA
INSERT DOUBLE-R – COVERT OPS

BEFORE clicking “Insert”, it is advised to familiarize yourself with the steps below. Any mistakes in the steps costs you one of the three attempts. When you run out, you must refresh the entire browser page / game to retry. Once you’re ready, insert the disk, let it load, then click the “FIX” button.

Line to the Ground

Requirements are unknown, the quest was briefly mistakenly added to the game on the 1st of October.

1x Holoscene Holographic processor, 1x FARLINE Universal Crimper

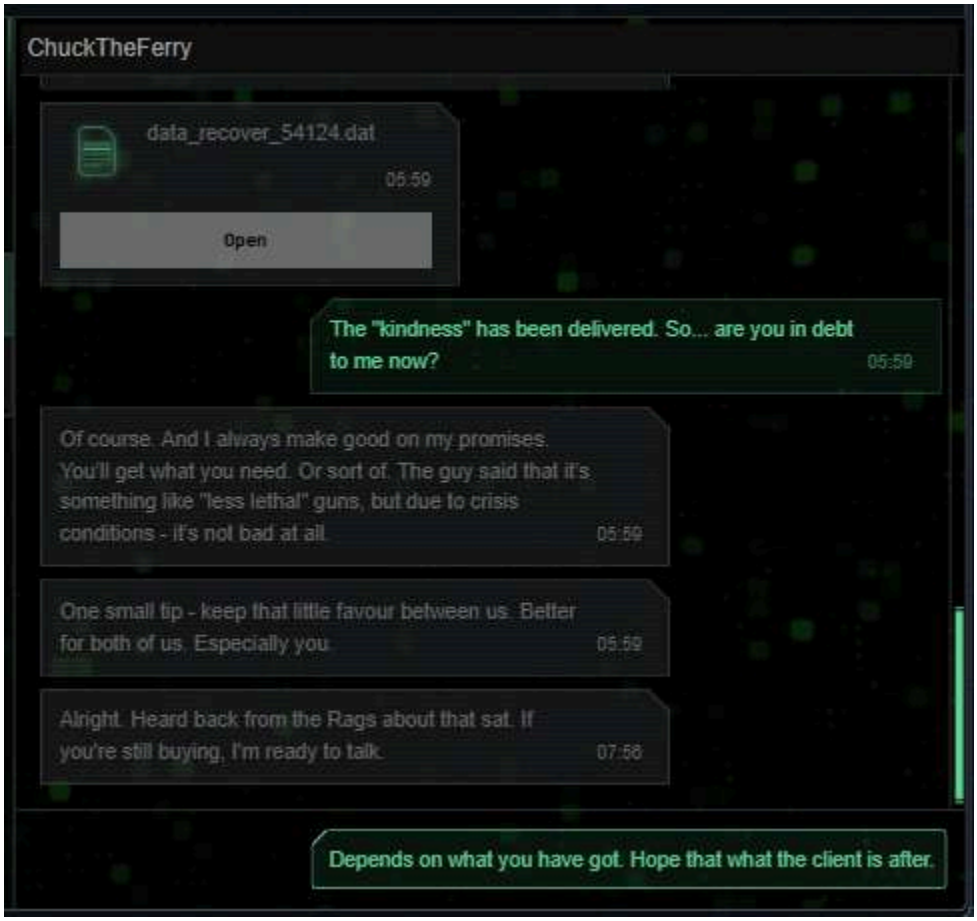

Fragile Deal

Follows after the Private Matters quest.

- Added in Update 3.100.6
- Conversation branches depend on decisions

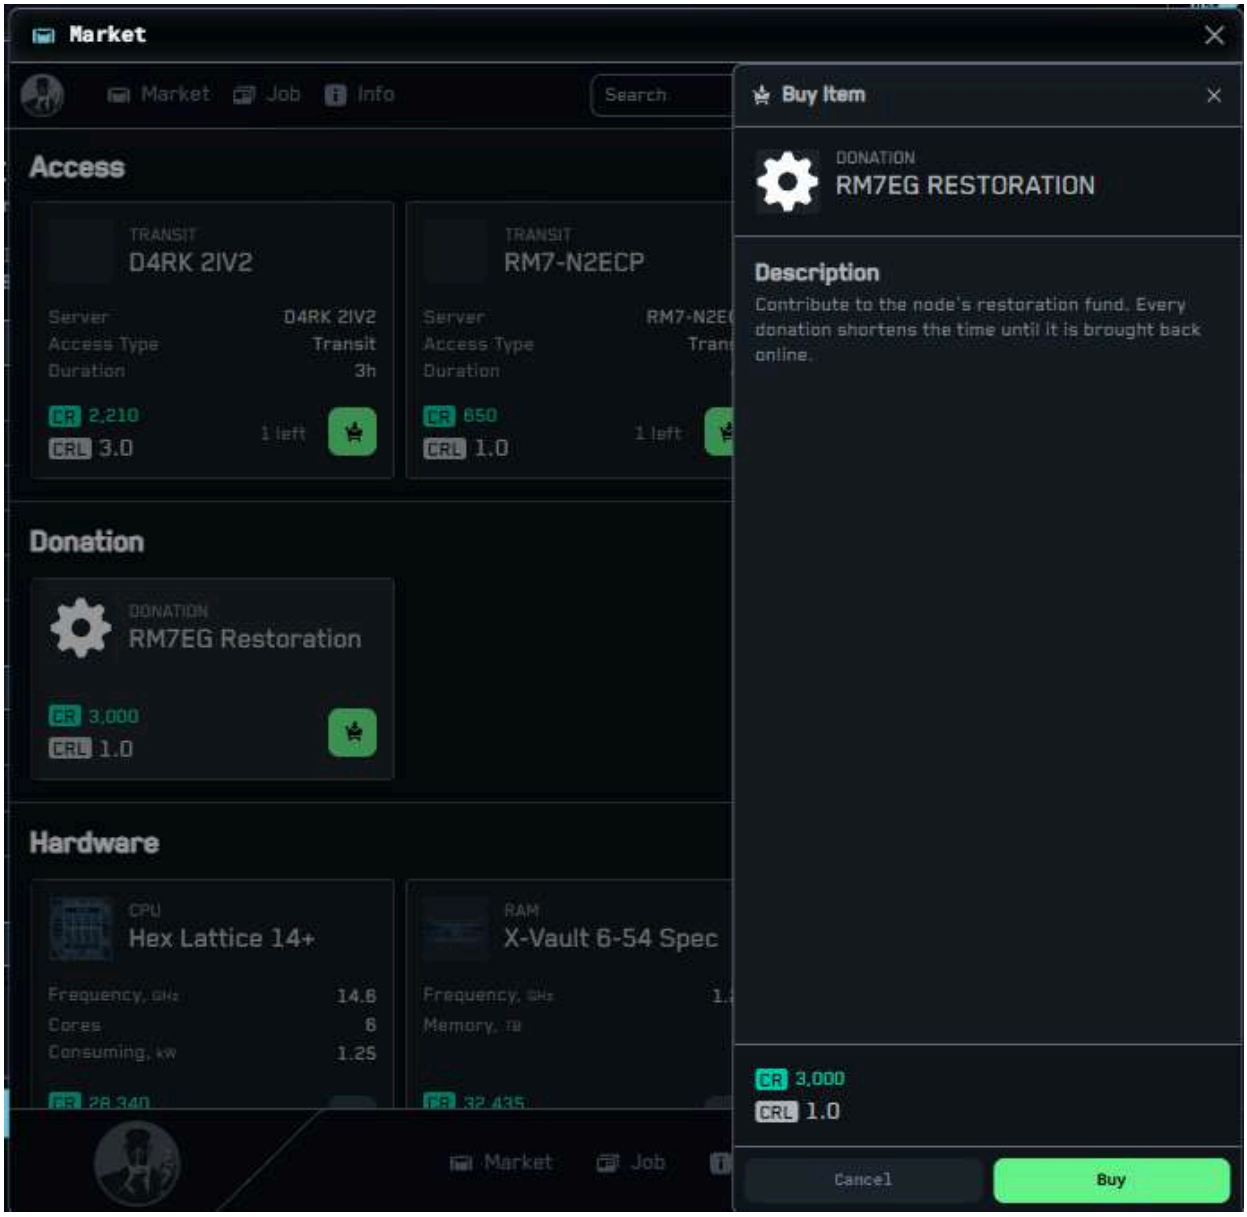

Connect to the **D4RK RM7EG** server and open the 4D4RKJUMP3RS.corie website in the browser.

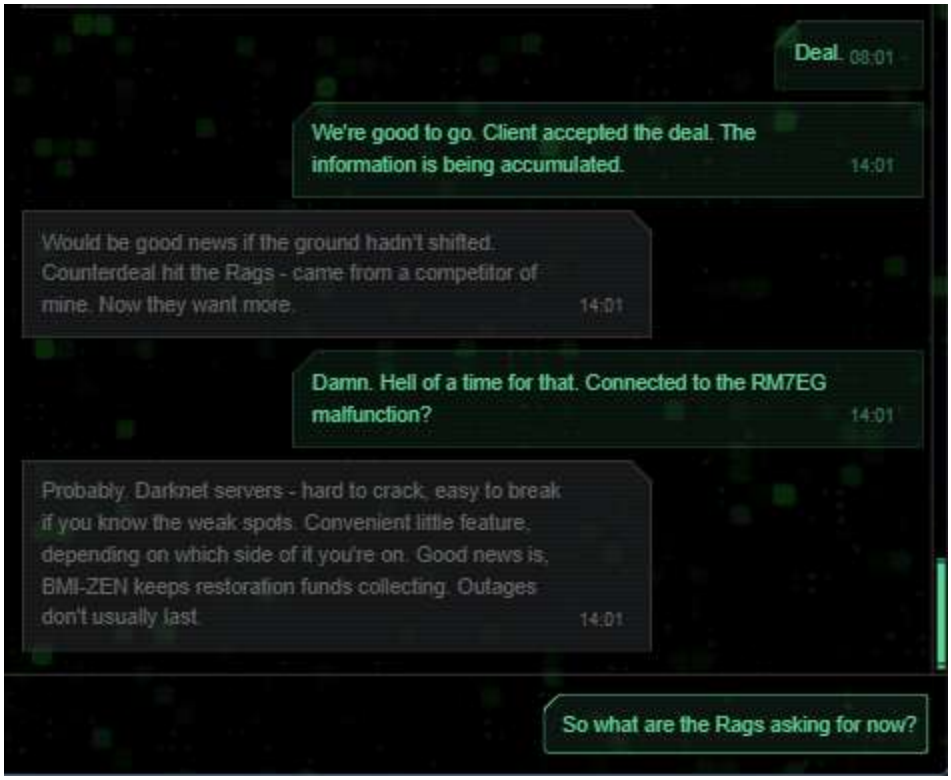

Talk with Chuck, open the Codex and **IMG_014625.jpg** then talk with Ozren Navratil again.

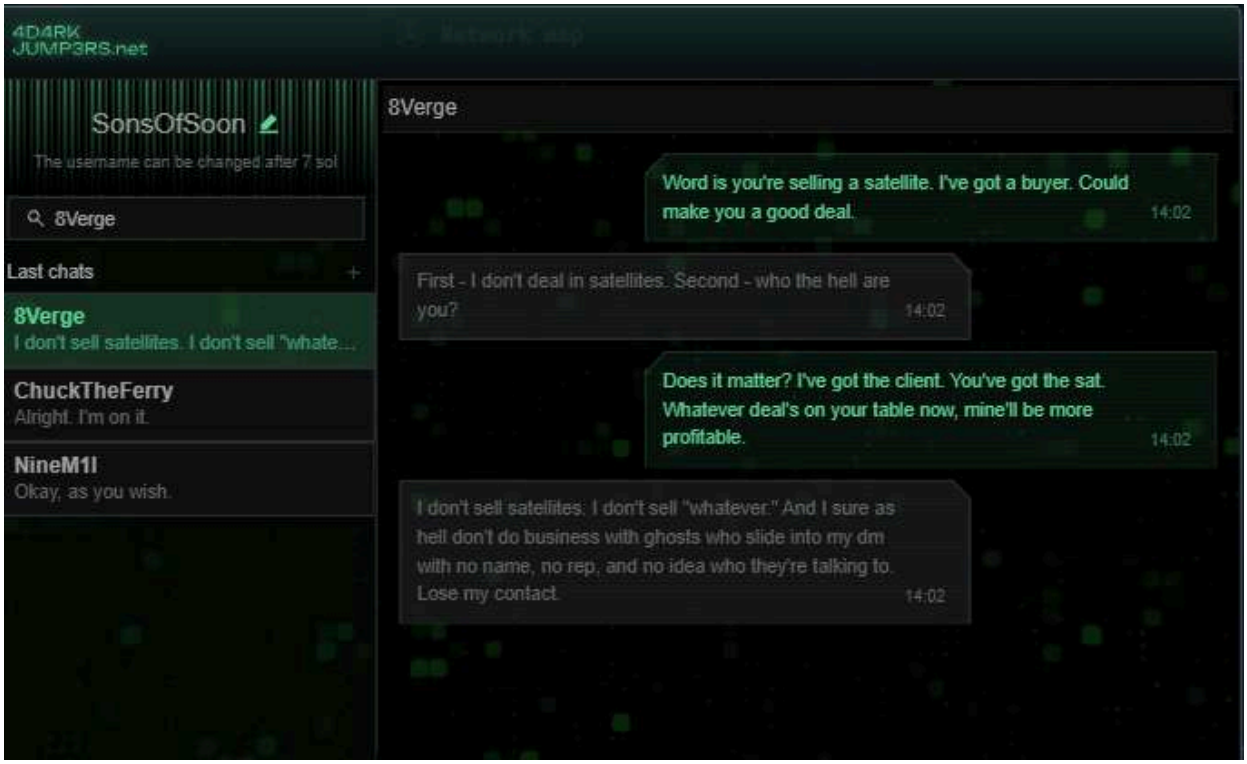

Finish with Ozren, then back to Chuck where we'll get the exact same dialog as before, and then nothing. Go to the D4RK Market and purchase 2x of the RM7EG Restoration offers, then wait 6 hours.

6 hours later and reconnecting to D4RK RM7EG and opening the 4D4RKJUMP3RS.corie site,

Once you finish talking to Chuck you can add the user ‘8Verge’ on the 4D4RKJUMP3RS.corie site which will trigger the ability to message Chuck again and pay 30k CR instead of downloading and uploading the files. Both options are covered below

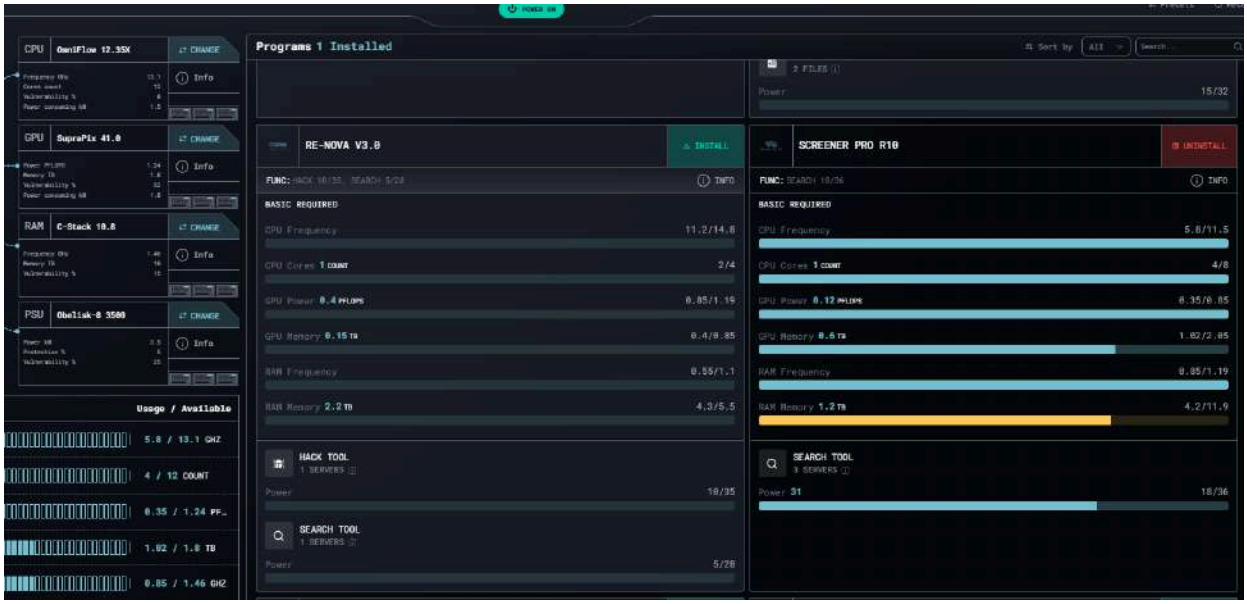

Option 1 - Pay Chuck 30k CR

Or

Option 2 - Collect 3 files from various B1N Servers to upload to Soyuz Public servers
B43274N - contact_recover_8V34213.doc
B43271N - dl043_iteration2_verge.txt
B43271N - changes copmlete 3 from vrg.rar*

*You may need to use Screener Pro software to see this one

As long as the Soyuz server is of type public you can upload all 3 documents one at a time and then when you reconnect to **D4RK RM7EG** and open the 4D4RKJUMP3RS.corie site you should see the following:

Regardless of option, you will finish talking with Chuck and be prompted to talk with Chris Tong.

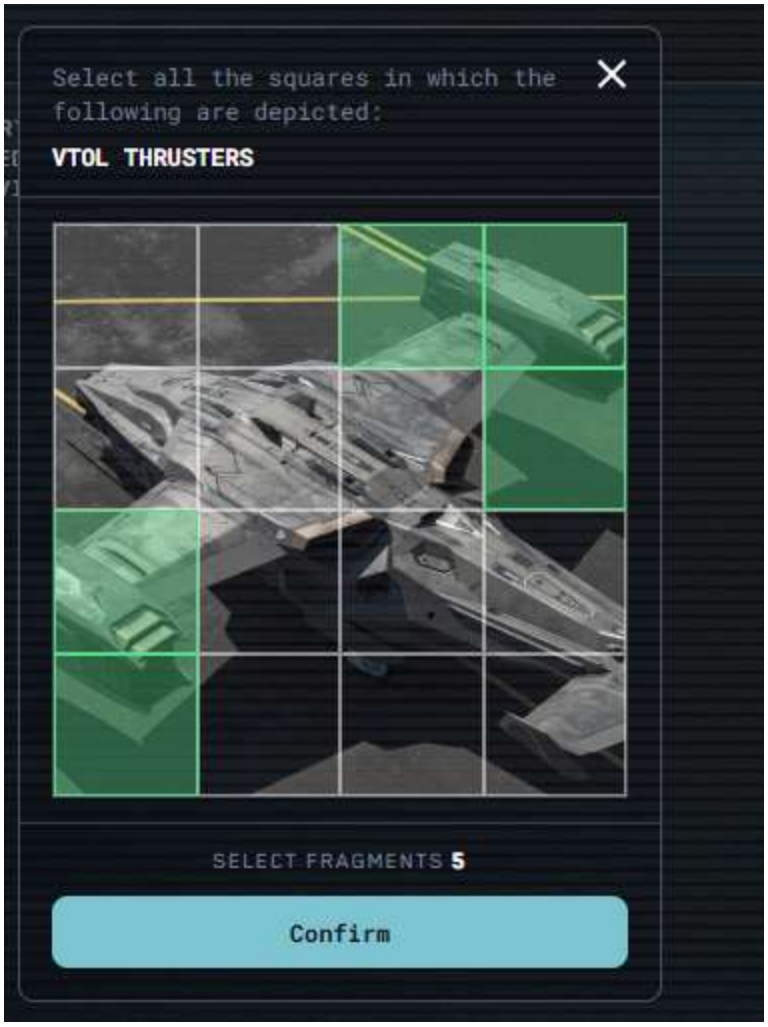

Chris will point you to the Website https://cedrt-m7exp.hub.corie which like the D4RK site requires you to connect to a specific server in order to access it. That server is 855.529.3.2 or **RM7-W3L2**

Click the ‘Expedition Guides’ tab and click download then click Captcha for the Captcha minigame to start. Let the CAPTCHA time out and then reopen it until you get the ROCKET image displayed below. Start from the point and follow the arrow selecting tiles.

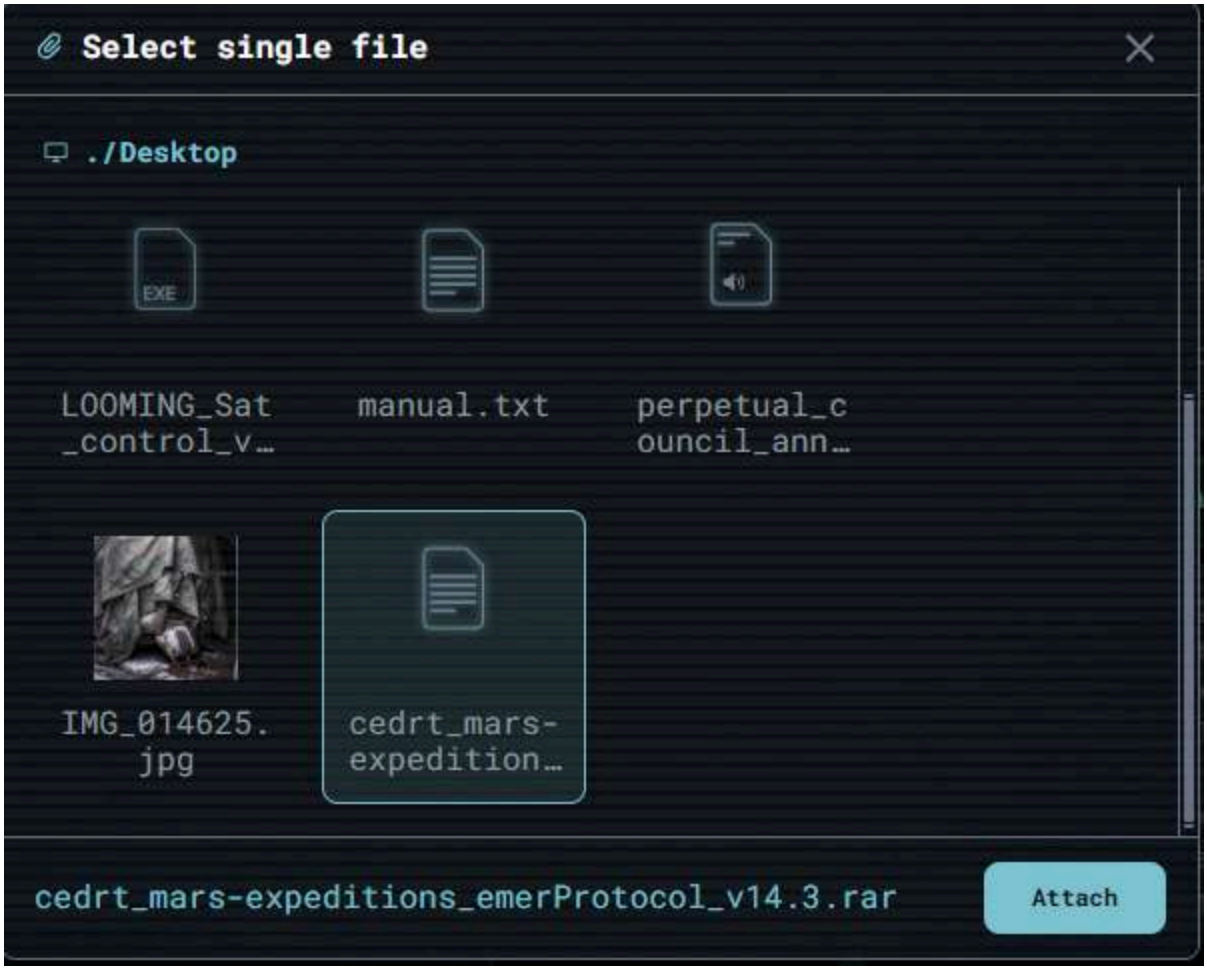

VTOL worked with

You will receive the **cedrt_mars-expeditions_emerProtocol_v14.3.rar** file on your Desktop. Reconnect to **D4RK RM7EG** and go to the 4D4RKJUMP3RS.corie forum and talk with Chuck again.

In case it wasn't obvious, the paperclip icon means you'll be uploading a file into the chat i.e., to Chuck and the only file you should send is the **cedrt_mars-expeditions_emerProtocol_v14.3.rar** file on your Desktop.

Then talk with Ozren. Ozren will give you 30,000 CR and a file: **ACAEV_429_(1).txt**
Open the file then Reconnect to **D4RK RM7EG** and go to the 4D4RKJUMP3RS.corie forum and talk with Chuck again.

This puts us at 86% on the quest with an 18-20+ hour timegate. Once the gate finishes the quest auto-completes itself.

ACT 3 - Expeditions

You may hire one merc at a time from the home market, on the hire tab. Their progress is visible on the expedition tab.
During the expedition, events can occur that modify the risk, and loot you receive. If you don't make a decision within the 5 min window, the default (usually safer, lower loot) option is taken.

A List of all known items, and values of Expedition loot.

It is not yet known what these are needed for although a (locked) craft and sell option exist. We will expand this page when the expedition goal is known.

Home Server - Skylift Remains - (Sorted by Value)

Somewhere around 26 - 27th April, Value dropped on all items by ~10%

ACT 3 - Jobs

Currently there are multiple known Markets available that can give Jobs for the player to complete, these are accessible on the Network Map.
Home (Available from start)
D4RK RM7MI (Unlocked early in ACT 3)

Each server has a number of jobs available. All of them other than “File Decryption” involve a server on the Map.
Note: the Access Conditions -

If the Condition is "Acquisition", you will need to have hacked the server to login to it.
If the Condition is “Grant”, you are automatically given access while the Job is active.

If you remove a file / log or IP not requested via a job, the server will trip into maintenance, and cannot be accessed until the red timer on the map expires.

You can refresh the job list (to scan if a job is complete) by clicking the Job button on the market, no need to navigate away and back.

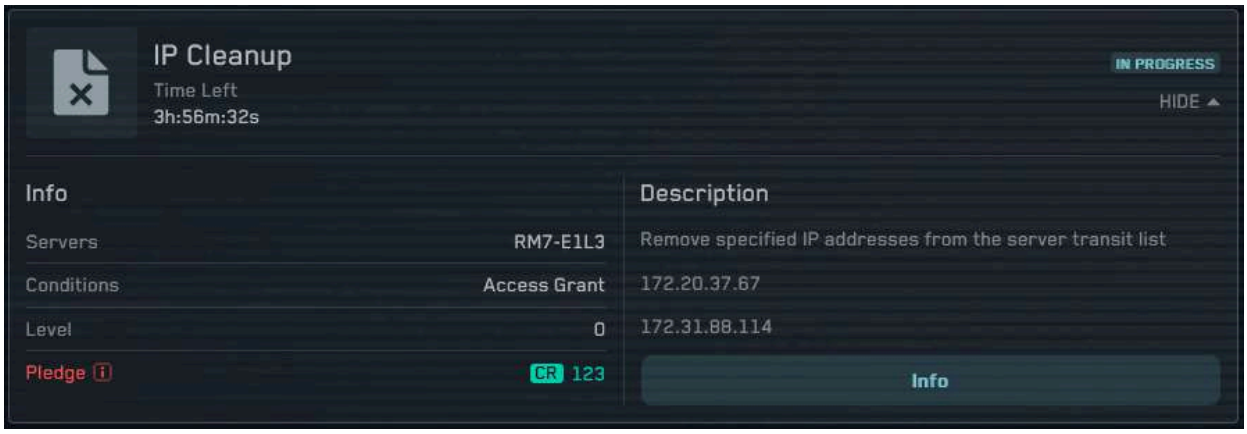

JOB TYPES:

File Decryption -

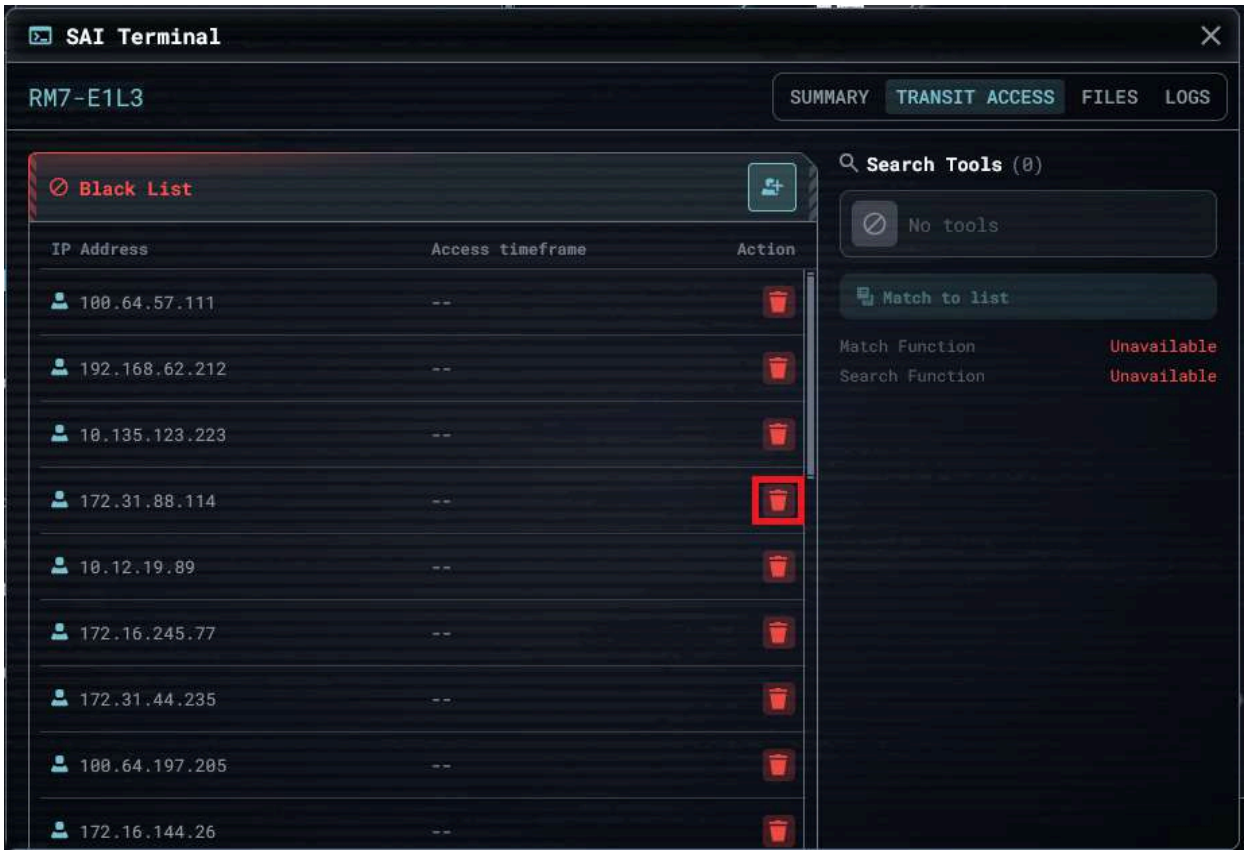

Upon accepting the task, an encrypted file is added to your downloads folder. Simply double click it and complete the minigame, then back in the market, complete the job.
The file will self delete from the folder.

IP Cleanup -

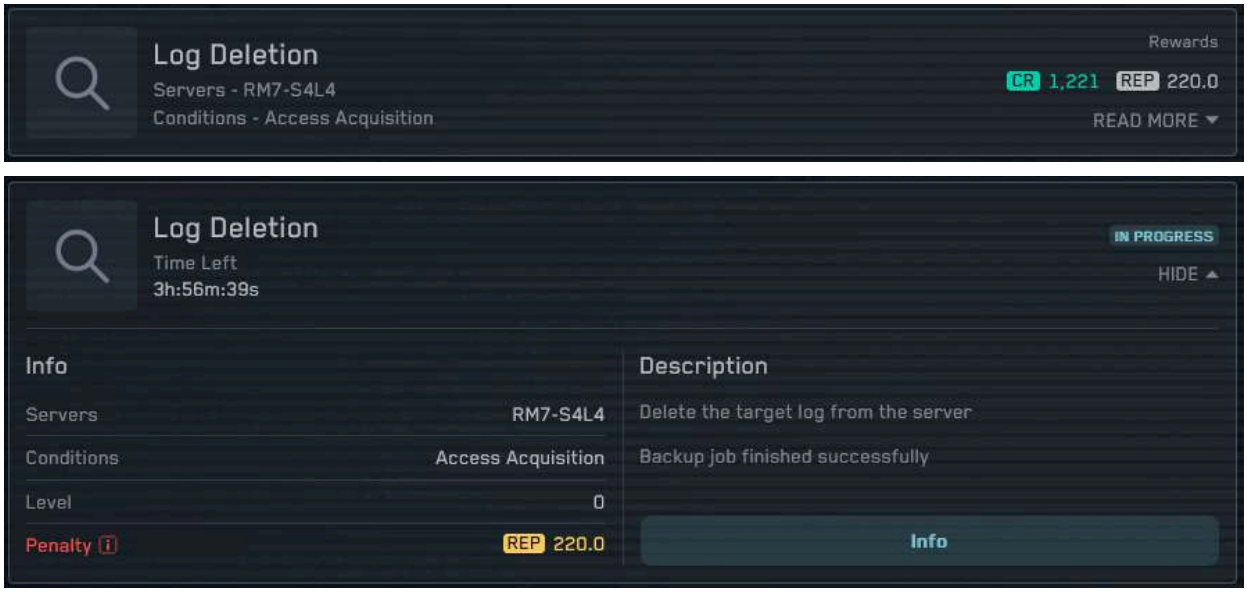

Connect to the server listed and on the Transit Access tab, click the delete button for the required IPs. Job Done.

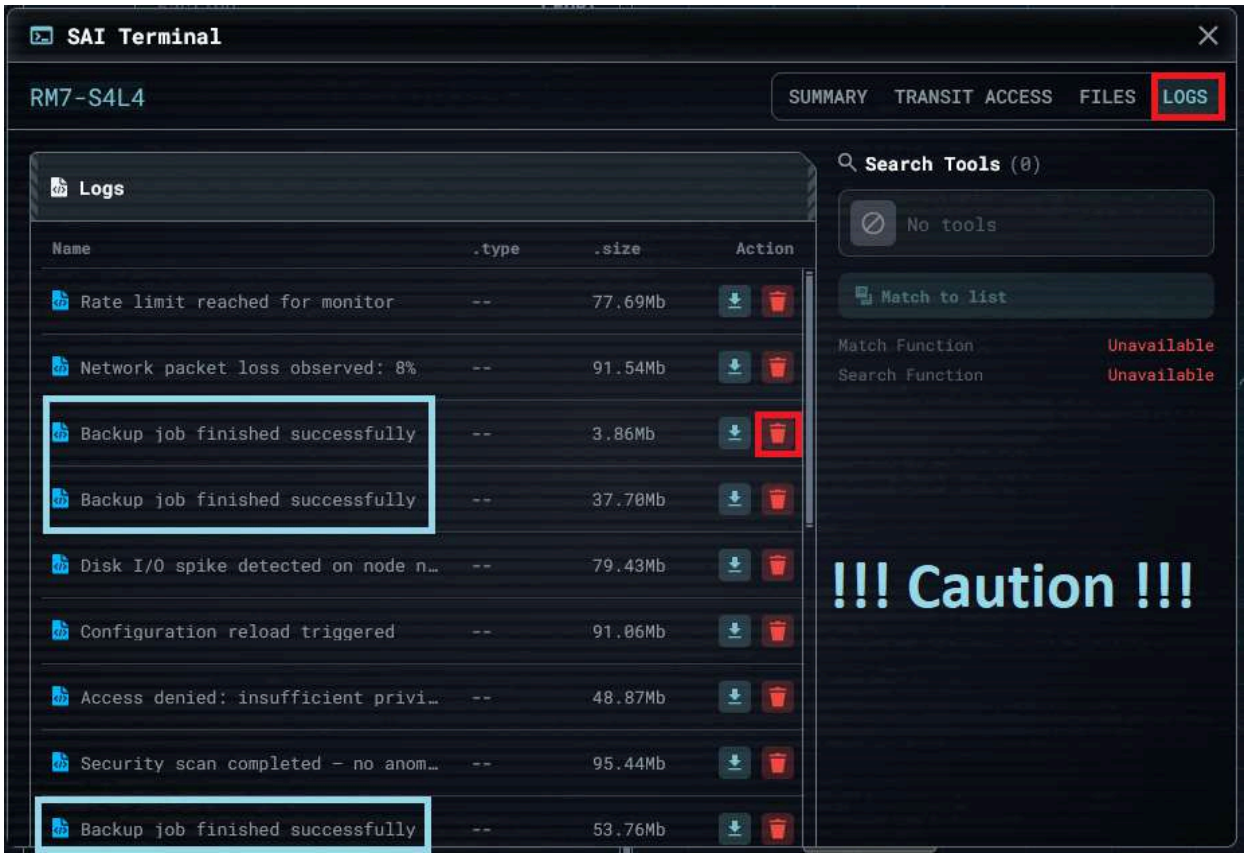

IP (adding) -

Connect to the server listed and on the Transit Access tab, click the add button for the required IPs. Job Done.
NOTE: if you open the job info tab in the market, there is a copy button for each IP to save you manually typing each one.

Log Deletion -

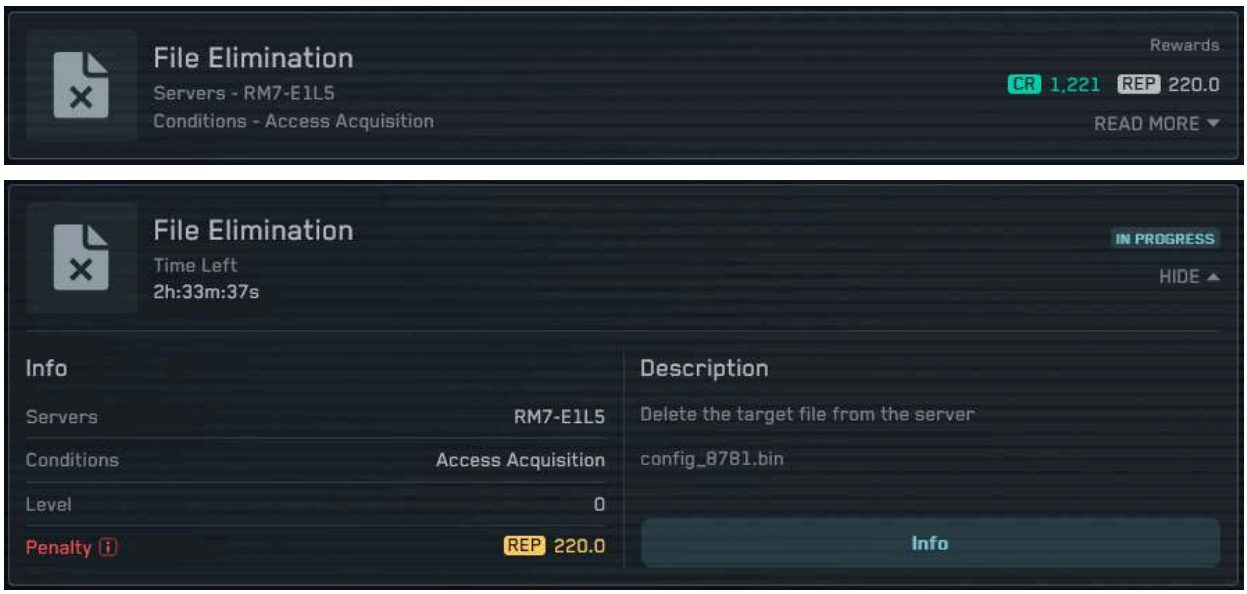

Connect to the listed server, and on the Log Tab, find the listed log, and click the delete button. Job done.
NOTE: there can be more than one log with the same name, deleting the wrong file will put the server into maintenance after a short time, so be fast with multiple. It is possible to use F12 to find the actual file, but it is usually the one with the odd (smallest) size, the 3.86mb file in this case.

Log Download -

Connect to the listed server, and on the Log Tab, find the listed log, and click the download button. Job done.

File Elimination -

Connect to the listed server, and on the Files Tab, find the listed file, and click the delete button. Job done.

File Download -

Connect to the listed server, and on the Files Tab, find the listed file, and click the download button. Job done.

File Upload -

Connect to the listed server, and on the Files Tab, click the upload button and navigate to the supplied file, it will be in your downloads folder. (Given when accepting the job.)

Download And Decrypt -

This task is a File Download PLUS Decryption. Connect to the listed server, and on the Files Tab, find the listed file, and click the download button, then open the file in your downloads folder, complete the minigame then job done.
Sometimes you will have a normal Download task, with a padlock icon, this is one of these tasks.

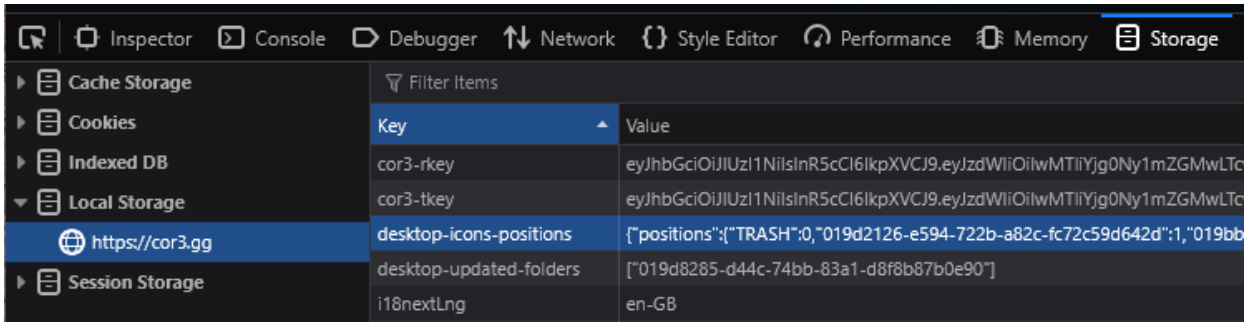

Tools

Solver for decrypt puzzles

Manual solver - https://idsir.github.io/crackhelper.html

Missing Desktop icons

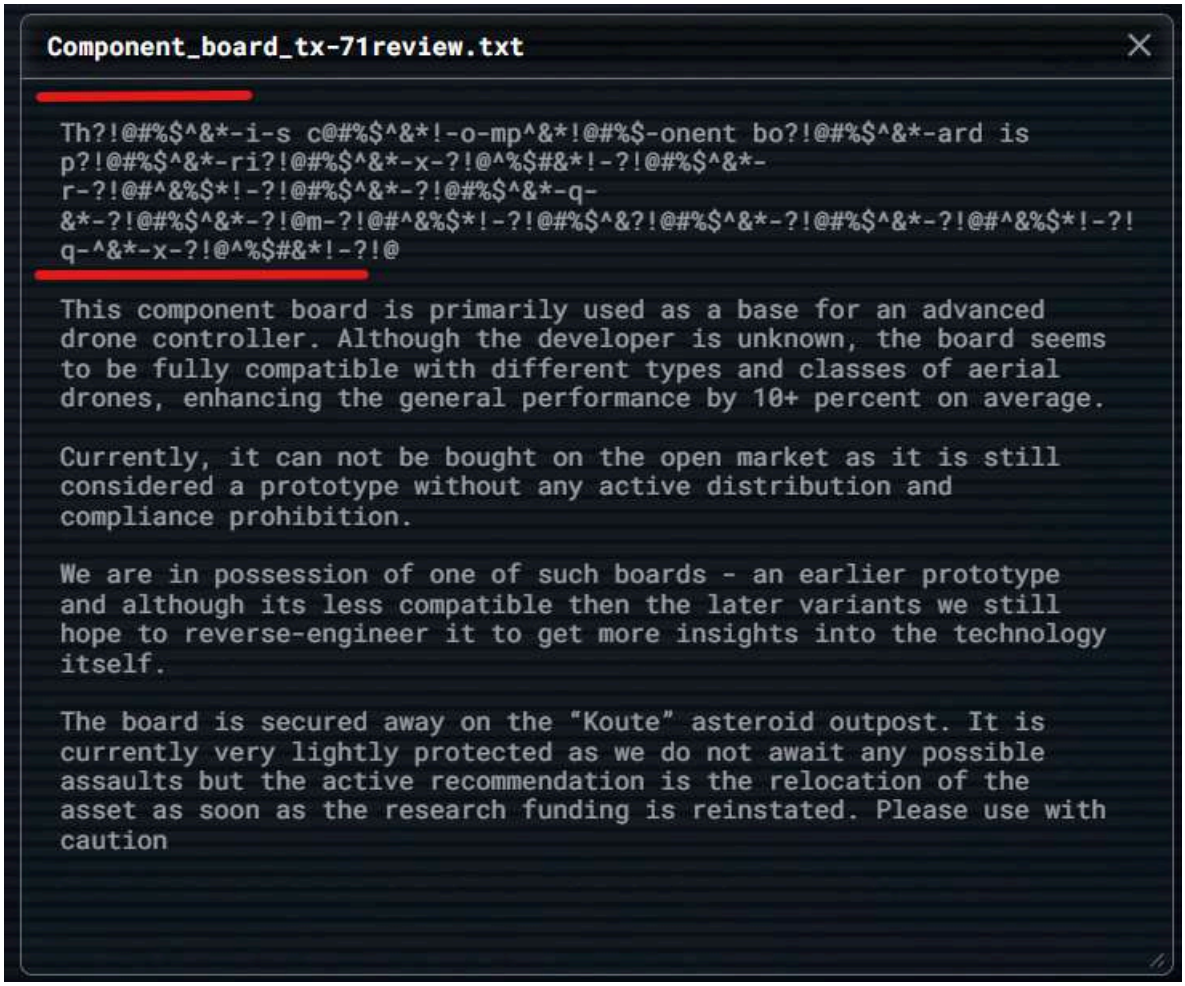

To reset the desktop, press F12, go to the “Storage” tab → “Local Storage”.
Find the row called “`desktop-icons-positions`” and delete it.
Then refresh the site and the desktop will be reset.

Unused Information

Component_board_tx-71review.txt

We receive a file called **Component_board_tx-71review.txt**

If we remove all the gibberish (such as using the regex `/[^a-zA-Z0-9 ]/gm`), we're left with **`This component board is prixrqmqx`**

This lines up with the first sentence, so if we take out what we know from that sentence, we're left with **xrqmqx**

Not sure if it is a key for later on, or just some attempt at showing corruption/encryption being decoded in a file.

FORERUNNER

In no particular order, this role was given amongst the first 100. Those who arrived before the surface hold what others won't.

Notes / Clues

1. After reaching REP 7.0 at Stage 3 we could finally read this file on Lunain the Archive. This has since been re-locked.

ECONOMICAL ANALYSIS OF THE "NEW" PL-18 ROCKET

ARC ID 3117.3 RESTRICTED

Date: 05.11.2105, Luna, Tikhonov expo complex. Investors presentation.

We, in Paradigm Logistics are proud to say that our work with our colleagues from Exar-Solis has finally achieved truly wonderful results!

Presented today, the PL-18 Rocket is a ground breaking achievement not only for our company, but for humanity as a whole! Our rocket is able to transport 20 more tons of usable cargo than any competitor!

The rocket uses new (upgraded) Helium-3 rocket fuel with a mix of patented and certified additions, which allow its engines to reach 30% more efficiency compared to the previous model.

Considering that Exar-Solis would keep the exclusive rights for production of Helium-3 on the Lunar refineries, we would have indisputable advantages in costs per launch.

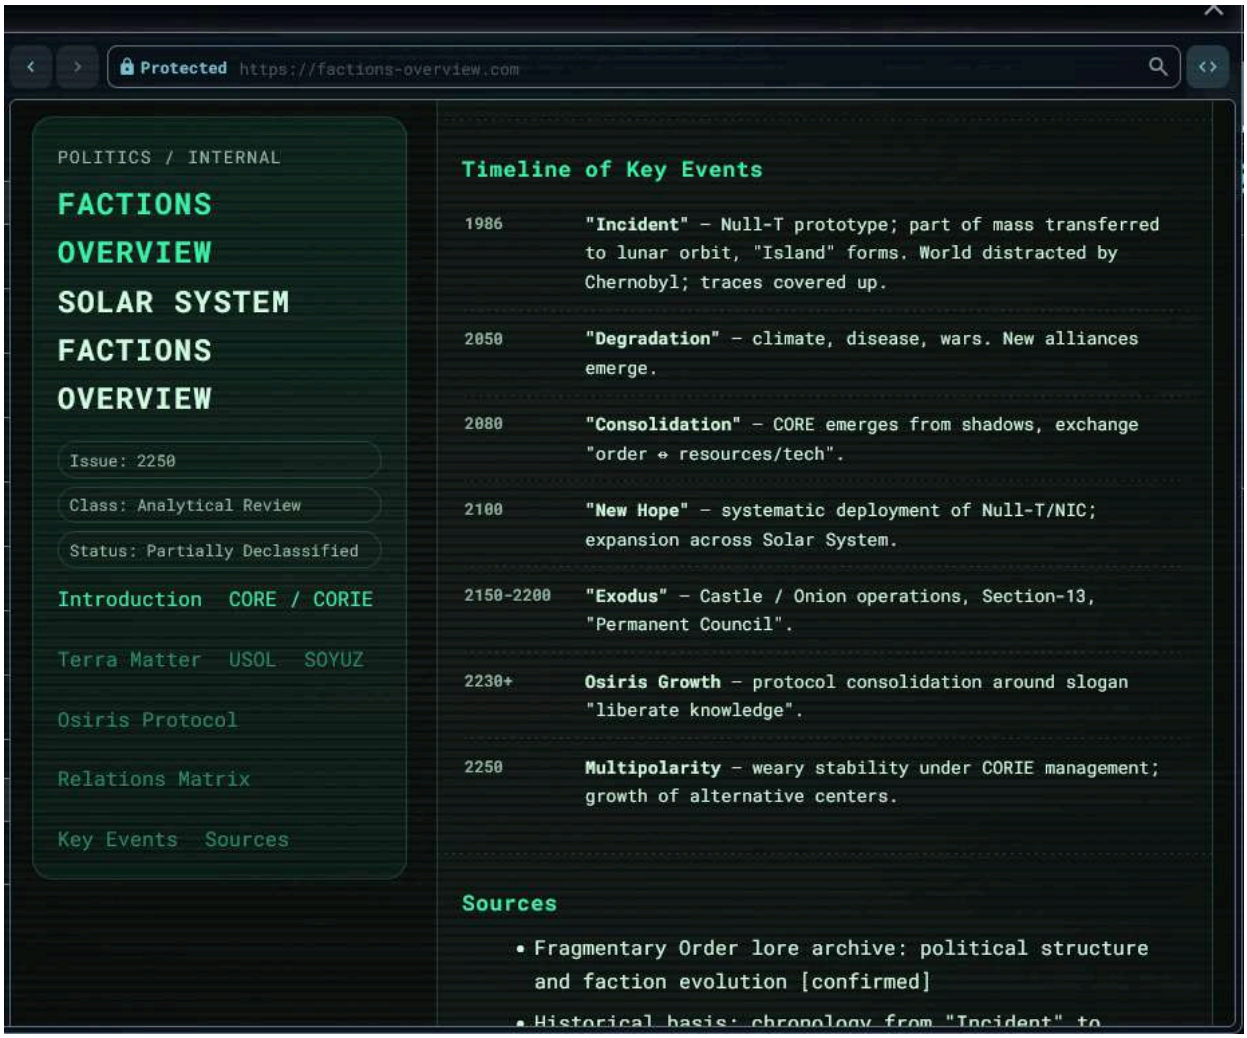

Our plans include an option for our current long-term customers to upgrade their existing logistics plans to a new rocket with only up to 15% increase in price. We expect most of those customers to commit to that.

According to our analysts that would allow us to increase our monthly profits by at least 20%, even considering possible loss of clients.

Our next step would be the further development of the technology, finessing the engines and starting their open-market sales.

With those fully ready, Paradigm Logistics aims to start our invasion into the shuttlecraft and colony ships market, for short to medium transfers in the solar system.

CORIE Help does a little trolling (Before unlocking the drive, on the ship)

Install FFmpeg and the following CMD can be used to directly pull radio audio:

```
@echo off
set "DURATION=00:01:00"

echo Starting 1-minute recording for all 8 channels...

start /b ffmpeg -i https://radio-corie.cor3.gg/wim1 -t %DURATION% -c copy
wim1.mp3
start /b ffmpeg -i https://radio-corie.cor3.gg/5h3 -t %DURATION% -c copy
5h3.mp3
start /b ffmpeg -i https://radio-corie.cor3.gg/0a7e -t %DURATION% -c copy
0a7e.mp3
start /b ffmpeg -i https://radio-corie.cor3.gg/f1n0 -t %DURATION% -c copy
f1n0.mp3
start /b ffmpeg -i https://radio-corie.cor3.gg/20gm -t %DURATION% -c copy
20gm.mp3
start /b ffmpeg -i https://radio-corie.cor3.gg/37.9M -t %DURATION% -c copy
37.9M.mp3
```

```
start /b ffmpeg -i https://radio-corie.cor3.gg/0.2ms -t %DURATION% -c copy
0.2ms.mp3
start /b ffmpeg -i https://radio-corie.cor3.gg/cp7n -t %DURATION% -c copy
cp7n.mp3

echo All recordings are running in the background.
echo This window will stay open until the 1 minutes are up.
timeout /t 65 /nobreak
echo Done!
pause
```

Change Duration to record longer, and filename at the end of the line. The timeout /t is in seconds and should be a little longer than the top set duration.

Alternate script from Dub on Discord

```
@echo off
setlocal enabledelayedexpansion

:loop
echo [%date% %time%] Starting ffmpeg...

ffmpeg ^
  -reconnect 1 ^
  -reconnect_streamed 1 ^
  -reconnect_delay_max 30 ^
  -reconnect_at_eof 1 ^
  -fflags +discardcorrupt ^
  -err_detect ignore_err ^
  -i "https://radio-corie.cor3.gg/rejvertkfytxkgbgk" ^
  -map a ^
  -vn -sn -dn ^
  -c copy ^
  -f segment ^
  -segment_time 300 ^
  -reset_timestamps 1 ^
  -strftime 1 ^
  -reset_timestamps 1 "71.5mhz_segments/stream_%%Y-%%m-%%d_%%H-%%M-%%S.mp3"

echo [%date% %time%] ffmpeg exited with code %ERRORLEVEL%
echo Restarting in 2 seconds...
timeout /t 2 /nobreak >nul
goto loop
```

All you have to do is update the output folder and the radio url (capture script).
For the concat, just take the recordings into a new folder and run the following batch file too

```
dir /b /on *.mp3 > list.tmp
(for /f "usebackq delims=" %%i in ("list.tmp") do @echo file '%%i') > concat.txt

      ffmpeg -f concat -safe 0 -i concat.txt -c copy full_recording.mp3
```

Old contents of the document before a restructure.

Loop 0 - Tutorial
00:00 in video - Cor3.gg ARG Walkthrough

Read Contract.pdf + Diary.pdf
Check the messenger with Aurana and reply to each message.
To open Documents folder, the password is your FREEL_### from the top right without the @
For example, mine would be FREEL_019BB847-FDC0

Open each document, there is a minigame for each document.
You will also get a file on the desktop called “Fromafriend.png” to signify completion of this step.
View it if you’d like.
Return to messages with Aurana
She will tell you to run the CLI Command “`chmod 555 video`”
Reply to her and then click the terminal icon on the bottom of the screen (>_)
Type / paste in “chmod 555 video” and you can now access the video folder on your desktop
Open it and watch the video, this is the end of the tutorial loop.

Following the video you will be placed on one of 4 loops below;
You MUST follow the steps of the path you are on before progressing another.

Loop 1 - Damaged Document

20:40 in video - Cor3.gg ARG Walkthrough
First Completion by JustJayz - Discord

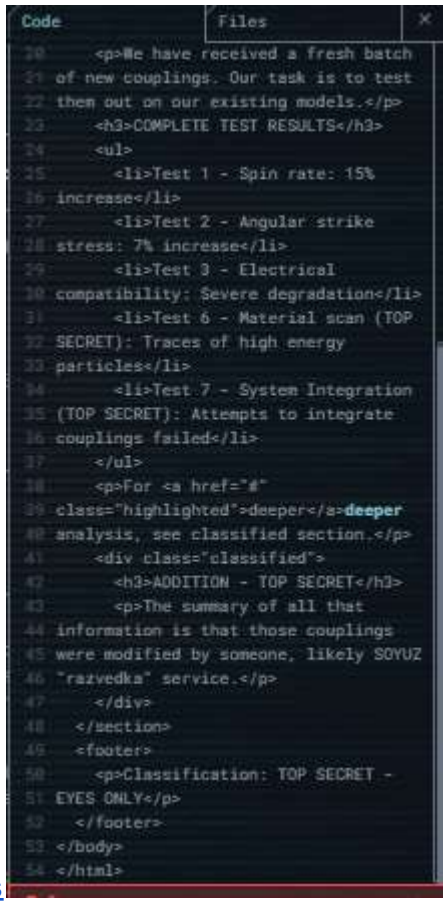

You receive a message from Aurana, who says you’ve stumbled upon a file, which seems to be a report of sorts, but is very damaged. She thinks it's related to the experiments we’re investigating.
https://cdn.cor3.gg/corie/loops/1/damaged_document.jpg

In the Document, you can find that the Investigation is carried out by Simon Webb.

Go to the messenger / CORIE Database and search `PERSON Simon Webb`

This will provide his ID (which is unique per person), which you can use to add him as a contact in the messenger.

Once added, he will reach out asking what you want, and will eventually provide you with a website link to an old archive:

https://viibot.corie/archives

A file will be added to your desktop, its name is a hint to the file you need on the archive. Note its starting letter to narrow down the correct result.
It will be named a letter and then symbols. Either A or B.
E.G. - A%-!%^@!@
You need to find the **classified** document, the rating is in the top right. There are also three restricted docs.

You only need the **classified** document, in it, view the image of the case, it has 104MHz hidden in it, and then tune the radio to the range 102-104MHz (this is hidden at the top of the case image) it will play morse code eventually on one of the freqs. Cycle through them. Morse will begin when the wind in the weather app is facing East.

The “Channel” will read d55pe18 on all correct freqs.
https://radio-corie.cor3.gg/d55pe18
The Morse translates to "LOOK DEEPER INTO THE WEB CODE"

If you close and reopen the classified report and look at the code in the browser, you will find a highlighted word hidden there “deeper”, click the word deeper to progress the discussion with Simon. Aurana will message you and thus completes this Loop. This only shows AFTER hearing the morse, and refreshing the browser (navigating away or close/reopen)

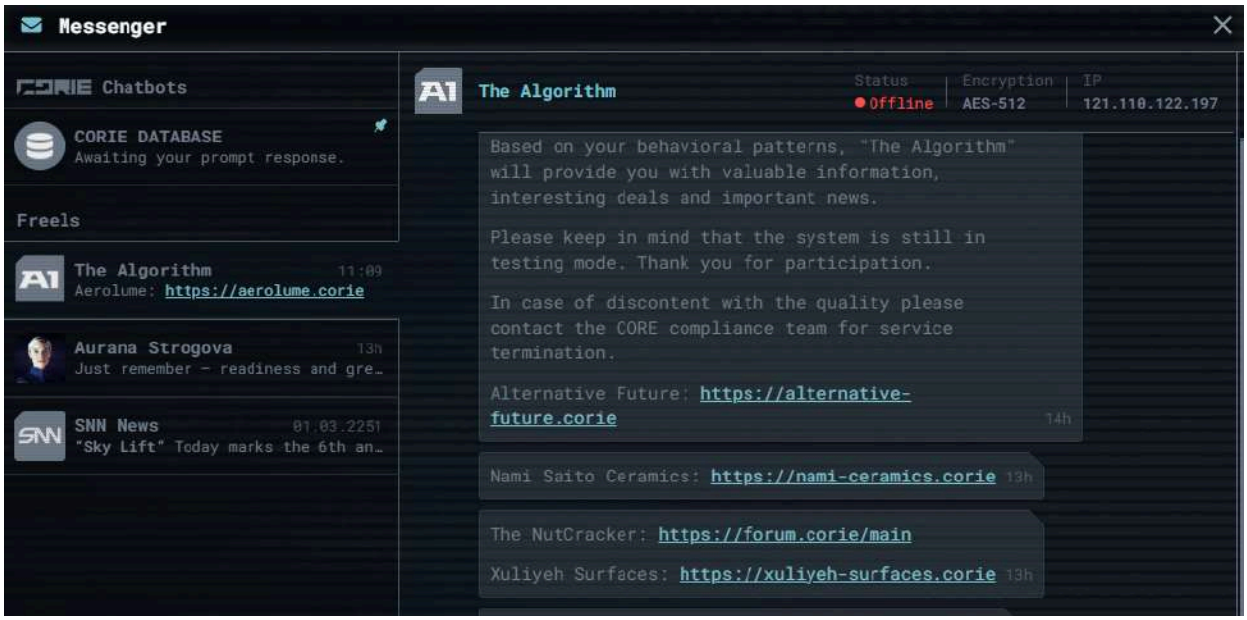

Loop 2 - Nutcracker Site

First Completion by Paralizard - Discord

05:28 in video - Cor3.gg ARG Walkthrough

You will receive a message from “The Algorithm” which grants you access to the site The NutCracker: https://forum.corie/main

1. Go to the nutcracker forum, The top 3 posts are useful, but only the first and third need viewing. The first has a link in the first comment to archive.corie/main. Click that to unlock that page on the left of your browser
2. Go to the 3rd post, scroll down until you find the quote block that has a token at the bottom. copy that token
3. `connect_site --token=tokenfromnutcracker` in terminal. This information is given on the 2nd post, but not needed to be viewed. this enables the Astrocrop site for 15 minutes
   for example:`connect_site --token=qStpdTou6FxxuSbDgQ9Q`

Be careful not to mix up `0` and `O`, and `1` and `l`.
There is an example of a 1 in the first image, second to last character

Be careful with the font if you are manually typing it out rather than copying it via F12/Inspector

4. Go to the Astrocrop site, open files from the top right of the browser, by clicking the <> button, then the Files tab and download logs.txt

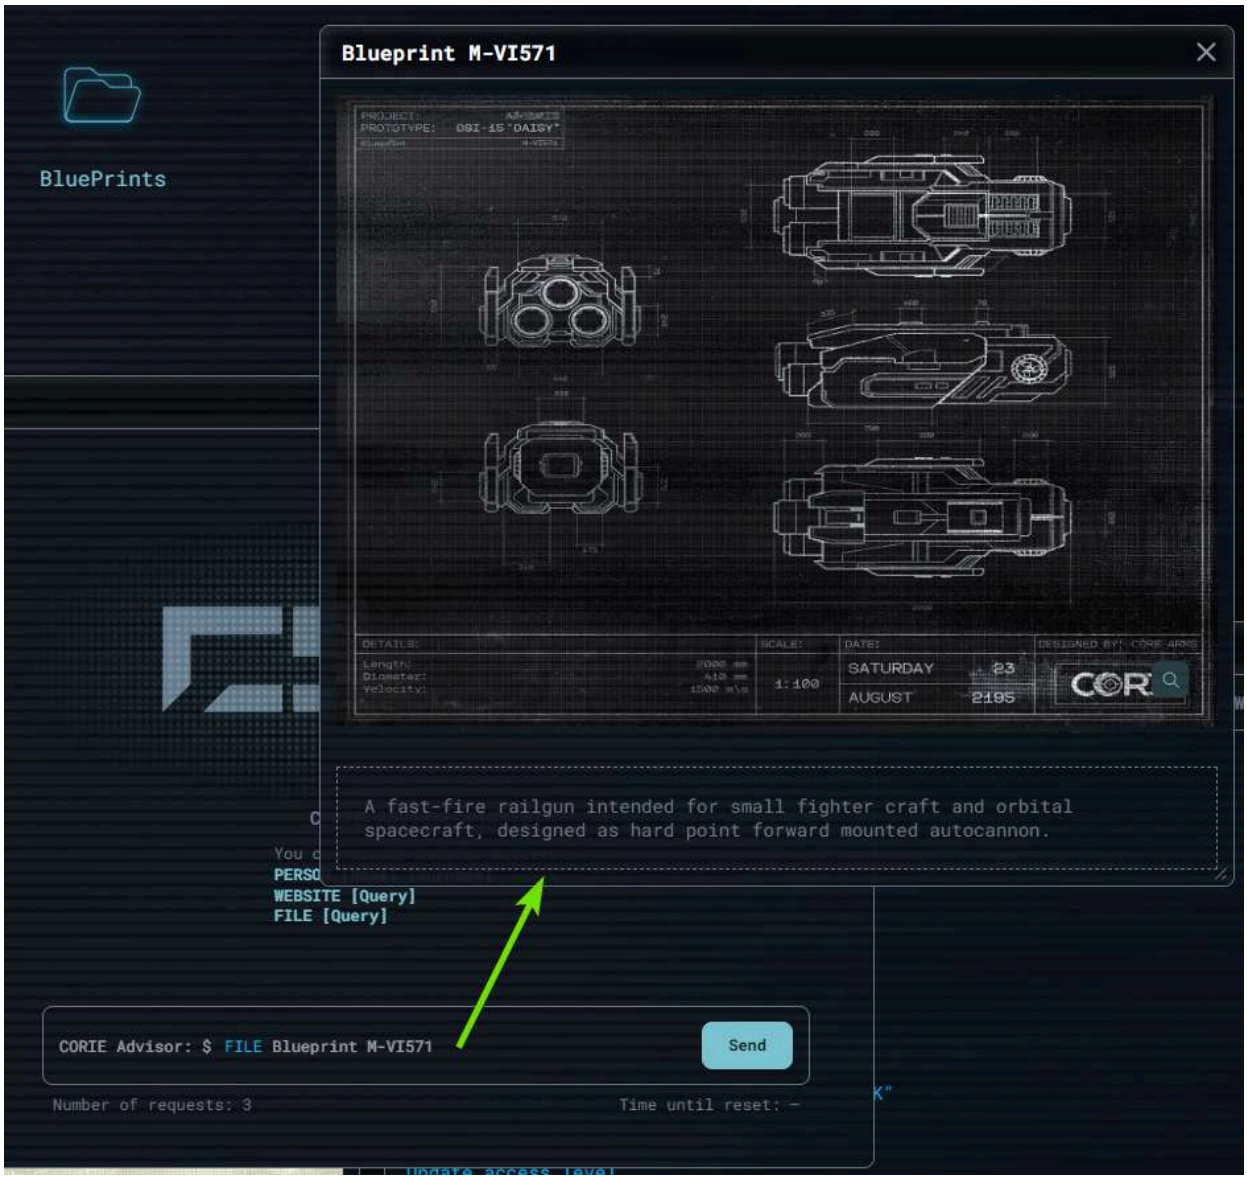

5. Sift through logs.txt to find the main offender ID. copy it, The line is WAF Block applied Id #####
6. Before the site shuts down, run `block_id IDFROMLOGS` In terminal e.g. `block_id 123456`
7. You should get a message from "Unknown User"
8. Go through the conversation, afterwards, he will “hack” you. Prepare to press your number keys when the rows light up red to reset them. If 1 goes red, hit 1 on your keyboard before the timer runs out.

9. This will then be followed by the standard Firewall Breach minigame.
10. You will get a new file on the desktop and more messages from Aurana and move to another loop.

Loop 3 - Blueprints

First Completion by xHughx/Mr.Souer - Discord

14:10 in video - Cor3.gg ARG Walkthrough

Decode the Blueprints with a minigame each then in the messenger to corie advisor:
These Filenames are discovered with a mix of the file's information and what can be seen in the corrupt file.

```
FILE Blueprint M-VI571
FILE Blueprint M-1509i
FILE Blueprint 771-A
```

`FILE Blueprint S-1745`

You are then sent a Password.txt
The password you require is one off the list at random to open the last blueprint.
Each failed attempt locks the file for 30 seconds incrementally (30, 60, 90s etc)

The last file to pull is `FILE Blueprint 771-B`

Message with Aurana then run in terminal

```
scan artemis
scp artemis
```

You will now have a folder on your desktop, Artemis
Open the puzzle locked files and find the circled date **01.12.2177**
This is the password for the locked file.
Open it and talk to aurana to progress to the next loop.

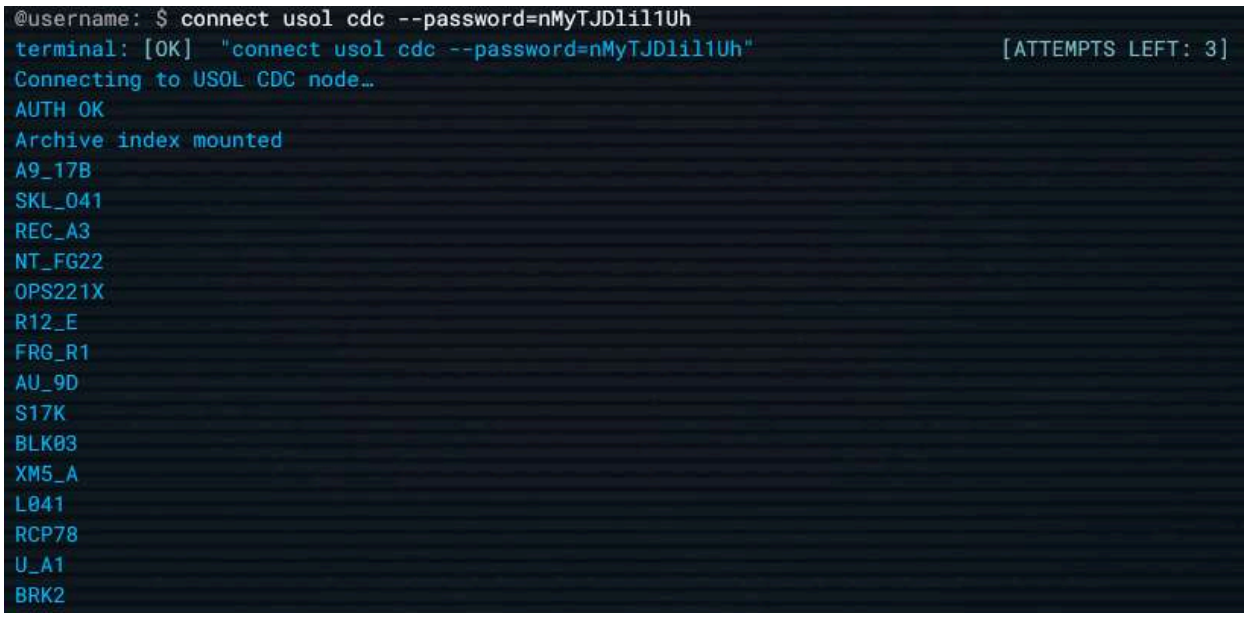

Loop 4 - USOL CDC / SkyARC.txt

First Completion by ImGoingSpace - Discord

09:25 in video - Cor3.gg ARG Walkthrough

You will receive a message from Aurana after watching the video telling you to look at the sky lift incident and connect to an old usol cdc archive.
Open the browser.
Go to the Infinite Memory site and in the top left, click the <> icon, then you should see three files, SKY_ARC.txt and two images, view the images and open skyarc. It will add to the desktop.

From skyarc, there is a token in the file, copy this, it is unique per user.
In the terminal, enter `connect usol cdc --password=YOURTOKEN`

4 of these files are valid, you need to guess which are correct.
Example commands -

```
scp A9_17B
scp SKL_O41
scp REC_A3
scp NT_FG22
scp OPS221X
scp R12_E
scp FRG_R1
scp AU_9D
scp S17K
scp BLK03
scp XM5_A
scp L041
scp RCP78
scp U_A1
```

```
scp BRK2
```

The list of files is different for each user. Keep trying until you get all 4.
You will be given a new folder on the desktop called Reports
Look through the 5 files you can open, one is 5.0 Reputation locked.
The other 4 files are the same but have different names for each user.
Take any full names you can find and in the corie advisor do a PERSON search for those names
e.g.

```
PERSON martin skypovski
```

You will find one profile that is complete with a 6 digit ID

Take that 6 digit ID and add them via the messenger “Add Contact”

Talk through their dialogues and review the two files they send, then report back to Aurana to complete the loop.

Post Loop Investigation:

First Completion by TheColonel - Discord

24:50 in video - Cor3.gg ARG Walkthrough

After completing all 4 loops, revisit the astrocrop archive and download all available files. One is rep locked to 4.0, which you now have, Sandman and sons.

We also have, in the reports folder, a file OPS_Archive which is 5.0 Rep locked.
You can run PERSON commands on the names in this file, of the Col and Majors

```
PERSON Augustus Nordman
PERSON Frank Kirch
```

You do not need to do these at this time, but one name will be used later.

Rep 5 - Trade & Shipment Database:

First Completion by TheColonel/ImGoingSpace

Upon completing all 4 loops and talking with Aurana, Your diary on the desktop will update, open it, then you will receive a manifest file and folder, open this file and continue the discussion. Aurana will give you a link to a site telling you to run some CLI commands.

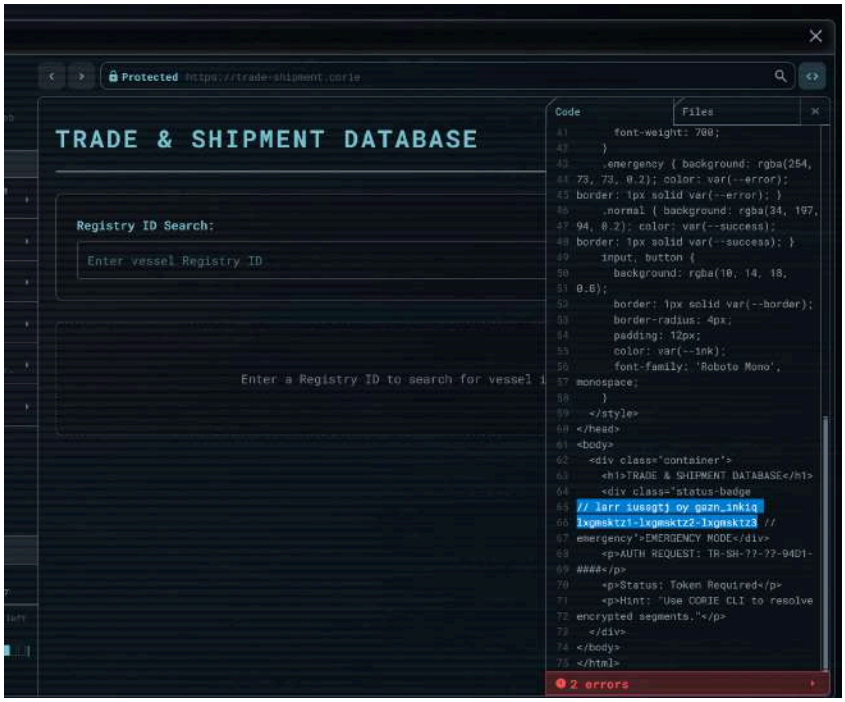

Run `auth_probe trade_shipment` in the terminal and you will see a list of codes.
For each of these you need to run “auth_check” ID, this list is the same for everyone but in a different order. 3 of them will be valid, so once you have 3/3 you dont need to auth check the rest:

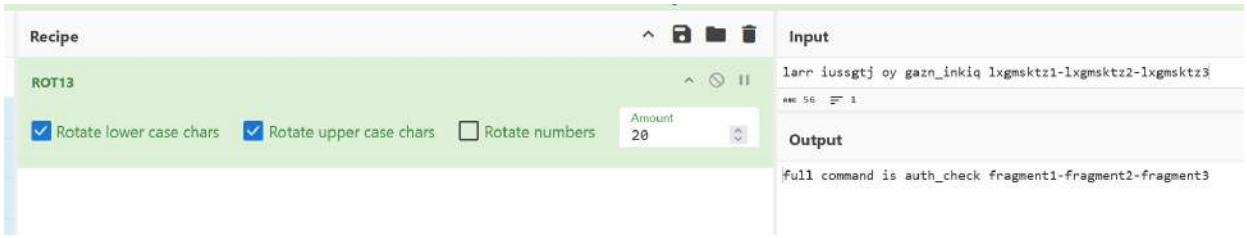

```
Auth_check BxfBj
Auth_check sxMyG
Auth_check UGrwI
Auth_check WHpQB
Auth_check p6ny2
Auth_check FZlms
Auth_check 3G1y5
Auth_check 6A9Hb
```

Take your 3 segments and Auth_check 1-2-3, e.g. (it can be in any order, so there are six permutations)

```
auth_check WHpQB-6A9Hb-sxMyG
```

A hint for this is in the “code” for the shipment site, hidden in a ROT13 cypher.

We then need some ID's. luckily the manifests document we just got is full of them!

We are interested in the Solaris ship's IDs, listed here for convenience

#	Ship Name (leetspeak variant)	Registry ID
1	S*lar!s	YLD-9982-HF
2	S0l@r*s	PGM-1548-UH
3	S°lar!s	GXT-3065-SA
4	S*lar!s	HTS-3761-JP
5	S0*ar1s	SRN-4806-TC
6	So1@r1s	VLK-8225-DB
7	S0l@r!?	CRX-5304-YM
8	S?l@r0	NXT-6692-QA
9	Š0lær1š	ZLM-2259-KR
10	SØl@r!$	TXR-7401-EJ
11	S0l-*@r!s	MWD-9370-LF
12	So1@r1s	BRV-4117-ZT
13	5ol@r!5	RND-8634-OP
14	S0|@ri5	QRS-5817-WX

One of these IDs will give a different result, some may 404, if they do 404, use the back button in the virtual browser (NOT YOURS!) to save bandwidth

The One we want will say REPNODE-M7 followed by a unique, per user ID

Search this ID and you'll see an image of a Silo lid. Your Diary will now update.
Read it and note the name to search up `PERSON Seamus Malkob`

He will have a user ID to add. Converse with him. Once complete in the browser, go back to Astrocrop Archive and on the files tab, download SBS4 and Demeter.

A folder is added to the desktop that is PW Protected, the password is in the manifests file. It is on the line:
“Sealed fluid modules (BIOHAZARD WARNING), SBS4-######”
The password is the SBS4-##### At the end of this line. the whole thing, including SBS4.
Open both files and the diary updates again. Read it once more. Aurana will message you and send over 5 IDs to add as a contact. The third ID will add a contact “V3 News”.
The Diary updates once more, read it. It states to look back through files for names relating to Mars, there are two -
`PERSON Thomas Albertson`
His Profile has an ID on the top right now, Add him. And talk through his dialogue to be told about a prototype called “Gobbler”
Then search for `FILE Gobbler` to see a new image to gain +0.1 rep.

From the OPS txt file, - `PERSON Augustus Nordman`

Talk through his dialog and you will be messaged by Aurana again.
She will give you a password to use the updater at the bottom toolbar.

Rep 6 - Updated Corie:

Once updated you will see new items on the taskbar you cannot use yet.
You'll need to save up 4,500CR to "move" to REPNODE-M7.

You will need to have completed 7 daily tasks to save this many CR.

Buying the ticket leads to a timer ending Feb 1, 2026 at 1500GMT
https://m7.repnodemassive.tech/

Stage 1: 0 to 4 Fragments

First Completion by Para & GigaMonkeh - Discord

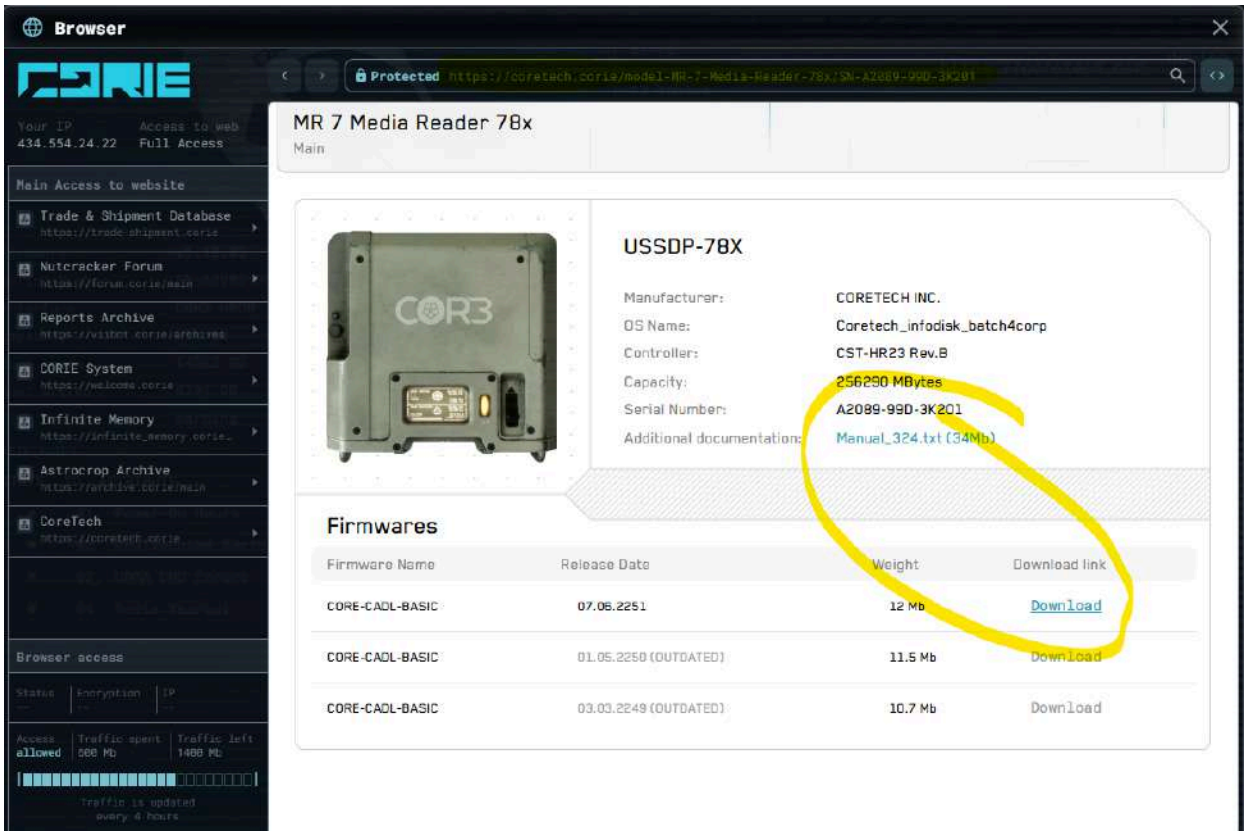

After clicking "Depart" on the M7 ship, you will get a message from Aurana telling you to collect your things and you'll go back outside the terminal. Click the Armor on the left table, the bag on the floor and on the shelf above the bag, the small white device.
You will be taken to the M7 site and trailer, click Cor3.gg at the bottom, then "Wake Up"

Back in the terminal this device is a new option on the bottom menu and needs decoding.

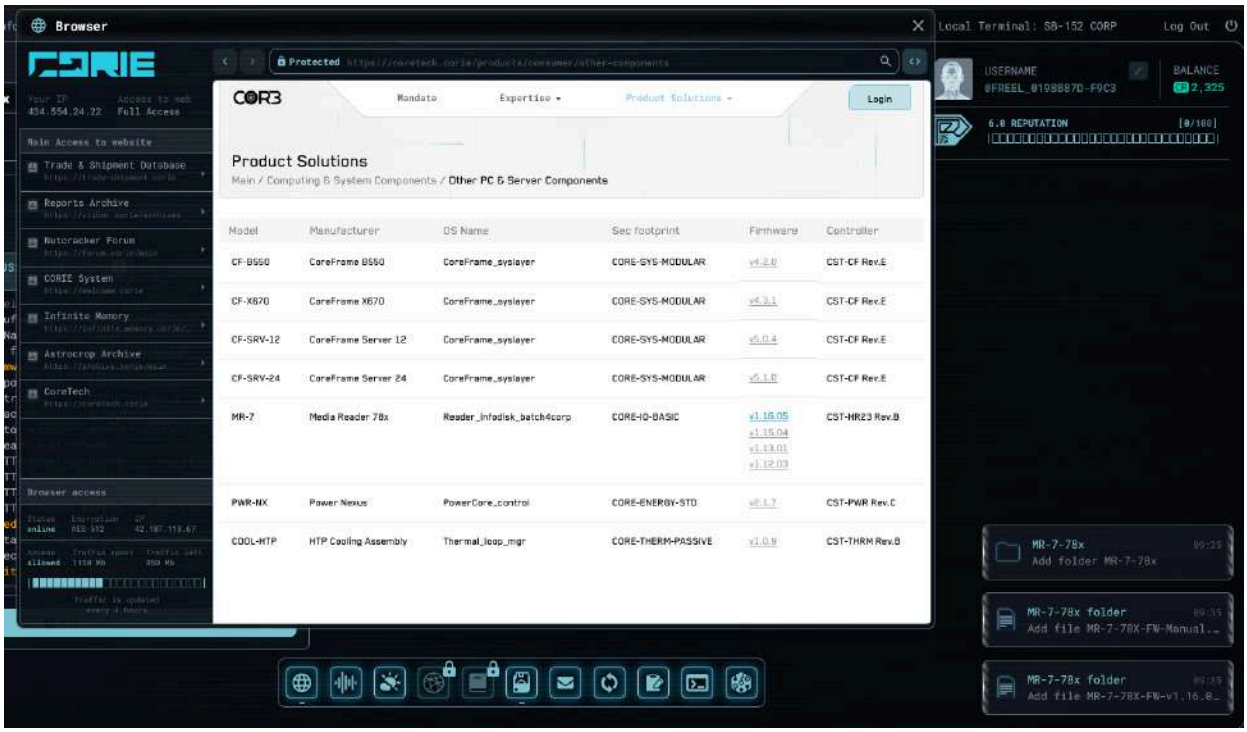

Review the device, rotate the model for info, then insert the disk. look at all its details to find a mention of the corietech.corie website. You need to manually type this URL in.

Manually browse in CORIE browser to:
https://coretech.corie/model-MR-7-Media-Reader-78x/SN-A2089-99D-3K201

Download **manual_324.txt** and download the **CORE-CADL-BASIC** link. This will add files to your desktop

Then browse to: https://coretech.corie/products/consumer/other-components
At the top, product solutions > Computing & System components > Other PC
And download the v.1.16.05 firmware update for CST-HR23 Rev.B

You will now have various files downloaded and applications ready to start decoding the harddrive which is our next step

Decoding the drive

Open the MR-7 Media Reader 78X application in your task part, and click on the hard drive to load it. This will then open a new mini-game. The manual for the mini-game is on your desktop in the file “manual.txt”, it’s an extensive document, but the steps do not appear to be unique for everyone can just be followed as per below.

Select **FIX** and it'll pop up the mini-game. In this mini-game you have 3 attempts through a 10-timer, however if you fail it'll just take you back to the beginning, there is no cooldown or timegames fortunately.

There are multiple steps to the mini-game, and each requires you change various settings to go to the next.

E-27 Steps:
FREQ B
Press SERVICE button
FREQ A
FILTER **ON**
Enter DIGITS: **555**

E-41 Steps:
FILTER **OFF**
POWER **OFF**
Enter DIGITS: **99235**
POWER **ON**

Enter CALIBRATION mode,
Set all three:
FILTER: **ON**

SHIELD: **ON**
FREQ: **A**

POWER **OFF**
Hold SERVICE button (for around 5 seconds, use the time left timer to help)
POWER **ON**

If done successfully device state will now be in **CALIBRATION** mode

The status code will now cycle through the below 4 key words in a random order, enter the corresponding codes below;

END - enter 7
ERROR - enter 21
LEAD- enter 44
FALSE - 14

E-52 Resolution (60% SYNC)
Set configuration
FILTER: **OFF**
SHIELD: **OFF**
FREQ: **C**

In this next part for E-52, the Power and Lock status icons will flash in various sequences, such as power flashes once, none or twice, and you need to enter corresponding code from the **manual.txt** on desktop, however they appear to be the same for all players.

Enter code in this order:

2, 1, 6, 5

SYNC should now be at **80%** with status **"Service Required"**

Re-Enter CALIBRATION mode,
Set all three:
FILTER: **ON**
SHIELD: **ON**
FREQ: A

POWER **OFF**
Hold SERVICE button (for around 5 seconds, use the time left timer to help)
POWER **ON**
Device state should be now **CALIBRATION** with current **SYNC** at **80%**

The status code will now cycle through the below 2 key words in a random order, enter the corresponding codes below;

TOOL = 27
LOOP = 6

SYNC should now be at **100%,** click **READ** to finish the mini-game

This is currently a bugged minigame and requires the COR3 Dev team to fix it!

It appears to work in the current build of firefox, alternately you can temporarily work around this by using this Firefox extension https://addons.mozilla.org/en-US/firefox/addon/cors-everywhere/

We know nothing nikita snow

Colonel is a BSG spy - *Actually I'm a spy for both now…*
LordCommander is a Cor3 spy

Achievements

Icon	Name	Description	Category
	The First Step	Complete Quest 0 in Act 1	act_1
	My name is roomba	Fix the cleaning robot in Side Quest 5	act_2_side_quest
